HEARING EXAMINER MEETING
THURSDAY, JANUARY 16, 2025 – 6:00 PM
501 DELTA AVE, MARYSVILLE, WA 98270

PA24-024 Stevens PRD and PA24-008 Lakewood Heights

AGENDA

The public hearing is a *hybrid* meeting which you are welcome to attend in-person or via Zoom. Anyone wishing to provide verbal public comment must pre-register by contacting the Project Manager listed in the item by *4PM the day prior to the meeting*. Those providing verbal public comment will need to provide their name, address, e-mail and phone number.

Join Zoom Meeting:
https://us06web.zoom.us/j/82587021221?pwd=JdUykwPXTX6kC0kMCDBvjuAJ1qikZs.1
Meeting ID: 825 8702 1221
Passcode: 533039
Phone: 253.215.8782

Call to Order

Lead Agency: City of Marysville – Community Development Department

Scan to View SEPA MDNS

Project Description: 182-lot Planned Residential Development on approximately 29.48 acres, utilizing residential density incentives consistent with MMC 22G.090. The project contains one (1) Category III wetland and buffer from an off-site wetland extends on-site. Project will construct associated improvements, include clearing, grading, and utility and roadway extensions. The project proposes a concurrent rezone to align the split zoning of the underlying parcels with the project proposal.

SEPA Threshold Determination: The lead agency has determined that this proposal does not have a probable significant adverse impact on the environment. An environmental impact statement (EIS) is NOT required under RCW 43.21C.030(2)(c). This decision was made after review by the City of Marysville of a completed environmental checklist and other information on file with this agency. This information is available for public review upon request.

Public Comment Period: This MDNS is subject to a 14-day comment period. Written comments may be submitted by mail or e-mail to the lead agency's SEPA contact person. Comments must be received by **December 17, 2024**.

Appeals: This MDNS may be appealed pursuant to the requirements of MMC 22E.030.180. Any appeal must be accompanied by a filing fee as prescribed by MMC 22G.030, and be filed in writing at the City of Marysville Community Development Department, 510 Delta Avenue, Marysville, WA 98270. The appeal must be received by 4:30 p.m., by **December 18, 2024**. The appeal must contain the items set forth in MMC 22G.010.550.

Plat Narrative

Summary: The proposal is to develop this 29.48 acres per its R-6.5 zoning as a PRD using 22G.080. Allowed Base Density would be about 153 homes. Using the Residential Density Incentives per 22C.090 to the maximum of 20% density bonus, another 30 homesites could be allowed or a total of 183 might possibly be allowed. This proposal is for a total of 182 lots.

The proposal is on two parcels located in the very NW corner of the city limits of Marysville north of 172nd St NE and across from Lakewood High School. The property is bordered by 11th Ave NE on the west and rural Snohomish County property along the north property line. The eastern parcel (…1100) has split zoning and is bordered on the east by Burlington Northern Railway. The Mixed-Use portion of this property borders the RR property and fronts on 172nd.

The western parcel, all zoned R-6.5, of this assemblage proposal has about 290 feet with frontage on 172nd St NE. Another 300 feet borders up with the back side of existing residential lots that front on 172nd. It also has frontage on 11th Ave NE.

The eastern parcel currently has mixed zoning with the R-6.5 portion in the NW portion of the parcel. The Mixed-Use portion has some frontage on 172nd broken up by the Service Station Parcel and existing small lots including the old Lakewood Store property in the SE corner.

NOTE: There has been a BLA recorded that puts this proposed PRD all on one parcel. The BLA is recorded but the Assessor's Office has not yet posted new Parcel Numbers. Our "guess" is that this parcel will be Parcel Number 310519-004-009-00 when the Assessor does assign parcel numbers. This BLA does carry the split zoning discussed in this narrative.

The portions of the assembled parcels zoned R-6.5 does have one homesite in the SW corner that will be saved, another old house will be removed. Part of the residentially zoned property is in pasture that is actively farmed for a hay crop or two each year. There are two wooded portions, one in the NW corner of the site; this wooded area does have a small Category III Wetland. The second area is

in the eastern parcel and has several groves of trees. Over the years, this area has had some recreational use by the family that has lived on this property for two generations.

There is also an offsite wetland in the NE corner of the property that has buffers extending onto this property.

Bulk Matrix: Density and Dimensional Criteria:

1. Dwelling Units Per "Net Project Area" has the Base as 6.5 Lots/acre. With NPA of 23.58 acres up to 153 lots could be developed—the proposal is for 182 lots that intend on using the Residential Density Incentives to get to 20% increase in density. The NPA was determined using the option for a 20% limit on deductions for roads.
2. Street setbacks are 20 feet to the garage and some homes may have 10 feet to living areas.
3. Buildings will have 10-foot separation with a 5-foot setback to the side lot line.
4. Rear Yard Setbacks are minimum 10 feet most all yards have 20'.
5. Total Impervious Surfaces with roofs, driveways, and roads is less than 65% and will be kept under the 70% Maximum.
6. Minimum lot widths allowed are 30 feet and the minimum lot width proposed is 40 feet.
7. Minimum lot area allowed is 3,500 SF and minimum lot area proposed is 3,514 SF with most lots more than 3600 SF.
8. Driveways are minimum 20 feet and we are providing 3 parking stalls on each lot where minimum is 3 stalls per detached single-family dwelling. Additional parking will be provided along the streets.

Split Zoned Parcel: There are two parcels (See NOTE above) that are part of this proposal, the western parcel (31051900400900) is zoned R-6.5 in its entirety. The eastern parcel (31051900401100) is more complicated. Of the approximate 27.5 acres, approximately 11.2 acres are zoned R-6.5 and 16.7 acres are zoned Mixed Use. Having one parcel with two different zoning designations is not desirable.

There is not an existing legal description of the exact zoning boundaries but North Peak Survey did prepare a zoning line that is based on evidence that was available and graphics provided by the City's maps. These types of zoning designations are typically broad-brush strokes made over larger general areas; they are not made with any site detail for site specific efficiencies.

The zoning boundaries, as depicted, create some "awkward" lines and it would be desirable to fix those lines slightly to make all the property more useable and put the two zoning areas on separate parcels.

The scope of this project would be to separate the R-6.5 zoned property from the Mixed-Use portion of this parcel. The proposal would be to move the existing western parcel line dividing the two parcels of this proposal to wholly include the R-6.5 zoning in one parcel and Mixed Use in the other. This would eliminate the split zoning on the eastern parcel with the residential project combined into one properly zoned parcel. We are requesting a slight modification to the zoning lines dividing the classifications for more efficient uses of the land in each zone.

The below will likely be hard to follow without Sheet P2 of the submittals in hand.

Recap: To rectify the "split zoning" inconvenience, we have submitted and now have an approved and recorded Boundary Line Adjustment that moved north-south parcel line between the two parcels. The revised parcels will be consistent with the slightly modified zoning lines proposed with R-6.5 zone in one parcel and Mixed Use in the other.

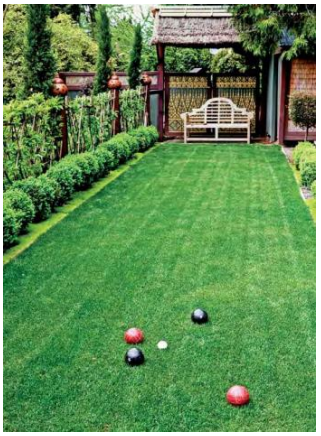
As mentioned above, the zoning boundaries are basically graphic and have no legal description. We propose slightly altering these zoning lines to remove the split zoning on the current parcels. North of the Service Station parcel, the graphical zoning north-south line is about 80 to 85 feet east of the east side of the Gas Station Parcel. This creates a "choke point" between the BNRR property and the R-6.5 zoned portion of the parcel. We did move that parcel about 85' west to align with the projected north-south line of the east boundary of the Service Station parcel. This will make that portion of what will be the MU property more useable.

In part, to make up for the above expansion of the MU, the proposal will reduce the MU area north of the Service Station and trade it for R-6.5. The west zoning break line will also be moved 15 feet east to line up property lines with the east line of the residential lots to the south (please see Sheet P2).

The current area of the MU zoning is 19.13 acres, including the Service Station Parcel; 1.38 acres will be added to the MU by widening the "pinch" between the RR Property and the R-6.5 zoning. The current R-6.5 zoned area, including both parcels, is 29.23 acres and a net of .4 acres will be added to that for the proposed total of 29.63 as the project area and the total R-6.5 zoning.

This proposed re-aligning of the zoning lines is what is best for the site making both parcels more usable and efficient. It is not an exact one-for-one trade as this adds 0.41 acres to the 29.23 acres of R-6.5 and reduces the current MU zoning from 19.13 acres to 18.71 acres (this area includes the Service Station Parcel). This makes a useful and efficient boundary for both the MU and R-6.5.

One little anomaly that makes it 'not quite perfect' when using the BLA as the tool to divide the zoning differences into two separate parcels, the zoning boundary should go to the existing Service Station north property line but that would "divide" the western portion of the MU from the eastern portion. This would create the "illusion" of creating one additional lot. To resolve that issue, this proposal leaves a 50-foot strip along the north boundary of the Service Station as a connecting corridor between the two segments of the MU zoning. This 50-foot strip will be used as a second access coming from the new Public Road along the west side of the Gas Station to future uses on the MU property to the east.



Open Space and Recreation (Per Conceptual Plan Used for this Pre-Application): a critical element of a Planned Residential Development is the provision of 15% of the Net Project Area (NPA) as Open Space. Our Concept Plan has 1,027,169 sf as NPA that would require 154,075 sf minimum but we are providing 266,450 sf or 29.9% of the site. Of the total required Open Space, 35% is to be Active Open Space or 53,926 sf. The proposal is providing 75,711 sf of Active Open Space which is 49.1% of the site.

This project is providing numerous Tracts with Open Space integrated throughout the development and is accessible by all in the community, and has visibility from the public and many surrounding

houses. The Open Spaces will provide very diverse and varied recreational opportunities to the residents. A very large percentage of the homes back up to these open space recreational areas.

There are 20 Tracts that make up the Total Open Space. Two are solely NGPA Tracts that include wetland, buffer, and Open Space. Five will provide Enhanced Landscape Entries. Eight of the Tracts will provide detention and "upland" areas for Active Recreation. Five will provide Passive Recreation, Stormwater Treatment and Stormwater Detention.

The most used recreational amenities in communities like this are trails and open grass fields or areas where all generations of families can enjoy. This proposal has both. It has trails, grass play fields that will allow for volleyball, badminton, biddy soccer, and other net sports. There will be areas that allow for lawn sports like bocce ball, lawn bowling, and croquet. More on that below.

Thirteen of the proposed Open Space areas provide stormwater runoff Detention Galleries and bio-cells for treatment. Portions of the Detention Galleries are in Tracts designated as Active Recreation; these have "upland" ground cover to support active use. Other portions of the Detention Gallery Tracts have Bio-cells for treatment of runoff from Pollutant Generating Impervious Surfaces (PGIS); the Tracts with biocells are designated for Passive Open Space.

Open space areas that are designated as the Active Open Space will provide manicured areas for Net Sports such as Badminton, Volleyball, or Crossnet-4 square. There will also be Soccer Goals to allow for family field sports such as soccer, flag football, dodgeball, or even whiffle ball. The net sport area will look similar to the badminton court above and to the right.

The multiple Open Space Tracts have no dimension less than 30' that are counted unless there are connective paths allowing residents to move from one area to another. The whole site is relatively level so grades and surfaces are suitable for recreation.

Each Lot will have a rear yard area at least 40' x 10' wide for 400 sf of Private Space.

Recreational Amenities: MMC 22G.080.100(4)(e) requires one large amenity or two small amenities per ¼ acre of Active Recreational Area. I would think this should say per Required Recreational Area as it otherwise penalizes projects, like this one, that provide substantially more recreational area than required by code.

Per the Code section, this project would need 7 "amenity points" or 5 "amenity points" based on the required area of Active Open Space. Sheet P6 breaks down the items as scored. The project is providing 8 "Amenity Points". For clarification, 2 benches equals 1 small amenity point and 2 small amenities equals 1 large amenity point.

Housing Mix: Existing Homes within 300 feet of the property are single-family detached. To the east and along the east side of the south property line is a Mixed-Use Zoning with several small businesses there including a Gas Station and Store. South of 172nd is the Lakewood High School.

This project is located in the very NW corner of Marysville with properties to the north and west being in Snohomish County and zoned rural residential. There is a new rural residential plat in process to the north of this site. Across 11th Ave NE to the west are several existing single-family homes, a couple on larger parcels that can be further subdivided and several on non-conforming lots.

The Mixed-Use Property to the east will likely be built out as apartments. Properties in the Mixed-Use zone to the south and along 172nd will likely develop as commercial with perhaps living units above—classic Mixed-Use Development.

Basic Yield: The Gross Site Area is 29.48 Acres but the Net Project Area after deducting the listed and appropriate deducts is 23.58 Acres. The Net Project Area times 6.5 is 153.27 lots as a Base Yield. Details of Calculations for Net Project Area are on PRD Preliminary Site Plan

Residential Density Bonus: using provisions of 22C.090, residential projects can increase yields by offering or providing elements from a complex list of options. Up to 20% bonus can be obtained over Base Density; that would allow for 183 lots. Details are on spreadsheet on the PRD Preliminary Site Plan. See spreadsheet on Sheet P3 for details of Residential Bonus Incentive calculations.

While the calculations could provide supposedly 47 Bonus Dwellings, there is a limit of 20% over Base Density or with 153 Dwellings as a base, only 30.7 Bonus Lots are the maximum. Final calculations could allow 183 lots and this proposal is for 182 lots.

Design Criteria or Design Elements: MMC 22G.080.050(2)(c) requires the development to achieve at least two results from a list of 8 options. This project would be offering three.

Per (c)(i), The layout and street design improve circulation patterns with road system providing alternate routes back to 172nd St NE. It provides 4 entrance-exit points with one directly back to 172nd and three intersecting 11th Ave NE to the West with an indirect route to 172nd St SE.

Per (c)(iii), Recreational facilities both active and passive are being provided in Stormwater Management Tracts and we are providing nearly 5 times the Open Space than the minimum required. We are also providing forty percent more Active Recreation area than the required minimum.

And per (c)(iv), this proposal is providing extensive landscaping with several Enhanced Landscape Entries and a landscape screening strip along 11th Ave. This site was designed to have open space along the 172nd frontage except for the existing house; these Open Space Tracts will have screening landscape along the two road frontages. The driveway to the existing house will be switched to the plat side and landscape screening will be placed along the frontage behind the house. There is extensive landscaping of the interior active and passive recreation areas. About 4,275 feet of six-foot fence will provide screening around perimeter of the project. Fencing along 11th will be behind a ten foot landscape strip.

Street, Sidewalks, and Parking: The Streets are to be designed per the City Standards for a PRD road with possible Modifications as allowed Per 22G.080.080.

Access to the site will be on the existing "road" west of the Service Station and across from one of the entries into Lakewood High School. There is a 30-foot access easement on the Service Station Property. That will be widened to the west to 50 feet to allow for a full residential road section.

The LNMP shows connectors that extend along the east property line to the northern boundary of this property and the City Limits from 172nd St NE. That intersection would only be 200 feet from the RR Tracks.

The eastern north-south concept connector running adjacent and parallel with BNRR property as an extension of 19th Drive NE would dead end into the offsite wetland. This would not be practical or useful. The property to the north has a Rural Plat that has been approved for Construction. The likelihood the Puget Sound Regional Council would allow an expansion of the Urban Growth Boundary to the north is extraordinarily remote given the current attitude of that board. Extending this road into an significant wetland would also be unlikely.

The LNMP also shows an east-west connector along this northern property line, at the City Limits, with an alignment that would be 178th St NE. This east-west road is also shown crossing the BNRR Tracks and would have to be constructed in the buffer of that offsite wetland. This road will never be able to cross the tracks unless there is an overpass built; that is a remote possibility. The City has a lot more important overpasses to build, including one at 172nd St NE and 156th St NE.

We believe we are proposing reasonable road system within this plat. As the MU property develops, other connections may become relevant. We are not providing a connection with a public road to the east Mixed-Use property as that will be developed with Private Drive Aisles. Connecting a Public Road to a Private Road system does not make sense. It does not make sense to connect a public road through this eastern Mixed-Use parcel back to 172nd intersecting with 172nd St just 200 feet from the RR Crossing; that would really create a traffic "mess" at an already compromised intersection when trains are passing by.

The LNMP Plan does call for a Roundabout at the intersection with 11th Ave NE. It is called out to be one-lane circle and it may be assumed it will be similar to the roundabout at 174th St NE and 23rd Ave NE. This project has put an Open Space Tract that can allow for dedications of ROW without impacting the layout. The LNMP calls for an 82.5-foot ROW width at this end of 172nd; but the Tract allowed for future dedication would allow for 50' on the north half of the street. That would allow for up to 100' of ROW for 172nd if needed.

As an update, an Intersection Control Analysis has been submitted to WSDOT on the design of the roundabout at 11th.

Sidewalks: are proposed per the PRD standard road section for all onsite roads. Frontage Improvements will be required along 11th Ave NE to the intersection of 172nd. All onsite sidewalks will connect to this frontage and will provide safe walking conditions for students walking to the Lakewood Schools. Although Lakewood Schools say they are all Bus and no walking to school,

With the roundabout and the Crosswalk at the proposed intersection along the west side of the Gas Station, I would guess that might change.

This R-6.5 zone and this project will have about 290 feet on very west end of 172nd St NE. Sidewalks for this segment will be per the LNMP. The LNMP shows a 12-foot multimodal path and a 10-foot planter adjacent to a 11-foot travel lane. The multi-modal path will merge with the sidewalk on the east side of 11th Ave NE. There will also be a crossing to the school. We have not detailed out this frontage improvement until details of the dedication can be resolved.

The Lakewood Schools are only 100 feet (across the ROW for 172nd from the SW corner of this project.

Parking: The PRD requires two parking spaces per lot/residence with 1 Guest Spot per lot/residence. There are 182 lots proposed with homes that will have two-car garages (no tandem). Two spaces in the garage will provide for the base number or 364 spaces. One tandem space in the driveway will provide for 182 Guest Spots. There will also be about 73 Guest Spaces along the streets in between driveways and along road segments without driveways.

Driveway Access: One hundred and eighty-two homes are proposed with 135 of these taking direct access to the residential road by driveway.

The PRD requires that 25% of the lots take access by shared driveways or Auto Courts; the 47 lots shown in this concept PRD satisfy that criterion by providing 25.8% of the homes having a shared access.

Landscaping: Landscaping will provide Street Trees along frontages and Plat Road. The Park Areas are extensively landscaped for their use. There will be 5 enhanced landscape entries and a ten-foot landscape screening buffer along 11th Ave. A fence is proposed around the project.

Sewer and Water: A Water Main runs along this project in 172nd St NE. Fire Flow Test showed 3076 GPM@20 psi.

The Sewer Trunkline has been extended to the SW corner of the Ziply Fiber lot along the future alignment with 19th Ave NE. Several projects will be involved in extending it to 172nd. Two projects will be required to bring it under the BNRR Tracks to the Gemmer Property.

Maintenance Provisions: Homeowners Agreements with Covenants, Conditions, and Restrictions will be provided with the Final Plat. There will be provisions for maintaining the parks and drainage facilities. Easements to the Stormwater Facilities will be provided to the City should their involvement become necessary to maintain functionality of the system.

CPTED: Crime Prevention through Environmental Design is required for Planned Residential Developments. Developments that are subject to Section 22C.010.290(5)(c) shall incorporate the following CPTED strategies into building design and site layout:

(a) **Access Control:** having open access or multiple access points to a building/home increases potential for criminal intrusion. This is especially true if one or more of the access points are not

observable by interested members in the community. For example, having two access points to a home with one being from an "Arterial" or road with a lot of drive-by traffic, traffic that has no real interest in the surveillance of the home, opens up a pathway for "criminals" to get into the homes unobserved. Having public access into the yard or home from one "end" of the home, especially if that access is from the side interior to the community and on a residential street, deters criminals from trying to enter a home. Members of a Community moving around on their community roads or sidewalks are more interested and observant of what is going on in "their" neighborhood. Those driving by on an arterial are thinking of getting to work or getting home.

The proposed layout offers public access to the homes from just one side, a side interior to the community where more interested observers will provide meaningful surveillance to the homes. The backyards will be fenced off or hedged off to any public access taking away that "hidden"

Fences along lots that back up to Open Space will have 3 to 4 feet of solid board with 2 to 3 feet of open lattice above the solid fence. This is to allow for surveillance of Open Space Residents in the Community. Examples shown are concept, specifications will come with Engineering Plan submittals.

unobserved pathway for criminal access. This also provides a nice "private space" for the people living in this community.

The Active Recreation Space is intertwined throughout the community with many homes having this amenity out their backyard. These residents will also be able to observe and monitor what is going on in these spaces. Many elements of the open space are also placed on the community streets. The Passive Recreation area in the northwest corner of the community will be fenced to control access into the backyards of this portion of the community.

This Community proposal provides per the COM 22C.010.290 "*…Provisions of natural control limits access and increases natural surveillance to restrict criminal intrusion, especially into areas that are not readily observable*.

(b) **Surveillance:** As with "Access Control", access points to homes and recreational facilities need to be surveillable by interested observers. Primary access to homes should be from one side, and that side should be from the side where the most interested observers can view these entrances. That is having access from a *community side of the house* and not count on disinterested drivers on a high-volume road that is not an integral part of the community.

From the cities CPTED Guideline document *"Open Spaces and recreational areas should be located so that they can be observed from nearby homes*." These are the homes of your neighbors and community that has a vested interest in keeping "their" community safe.

From COM Code "*Placement of features, uses, activities, and people to maximize visibility. Provision of natural surveillance helps to create environments where there is plenty of*

opportunity for people engaged in their normal behavior to observe the space around them." The people most engaged in having an interest in their neighbor's homes and their parks are members of that community.

This Community proposal does have access to the homes from the interior of the Community and restricts access from outside with either fencing or hedging. As stated in the previous section, the Open Spaces and recreation areas are observable from nearby homes.

(c) Territoriality/Ownership: Having the Primary Entrance coming from the Community side of the home will *"encourage interaction between neighbors"*. Having a Primary Entrance out to High Volume Road not part of "your" community will not encourage this community interaction.

From COM Code it is important to provide "*Delineation of private space from semi-public and public spaces that creates a sense of ownership."* Keeping the Primary Entrance to the Community side of the home allows for delineation of private space useful to the families that live in those homes. This as opposed to those homes that end up with an entrance at each end of the home with one coming from a "semi-public" side really removes any delineation of private space. Both useable ends of the homes end up accessible and unusable to as Private Space for families of the homeowner.

Techniques are incorporated that reduce the perception of areas as "ownerless" and, therefore, available for undesirable uses.

Examples of ways in which a proposal can comply with CPTED principles are outlined in the CPTED Guidelines for Project Design and Review, prepared by the city.

Rezone Narrative

Summary: This proposal is not to actually "Rezone" any of the property to a new zoning classification but is to trade areas of existing zoning to make each area more efficient and productive. Specific reasons were described in the Plat Narrative.

Described in the Preliminary Plat Narrative, a BLA of two prior existing parcels, one with Split Zoning, has been completed and recorded. The original western parcel was realigned to include this PRD Project as shown in the plans. The realigned parcels do have Split Zoning. See Sheet P2 for graphic of this propose rezone to remove split zoning.

The proposal here is to BLA the western parcel that is all R-6.5 Zoning to include the R-6.5 zone on the eastern parcel all into one R-6.5 zoned parcel and the remaining portion of eastern parcel to all have single zone of Mixed Use.

The reason this rezone is necessary is we are asking to trade areas of the existing zoning where portions of the Mixed Use would be expanded into the R-6.5 zone and portions of the R-6.5 zone would be expanded into portions of the Mixed-Use Zone. To recreate logical parcel lines though, does not result in a perfect foot-for-foot exchange. Of the 45 acres involved, there would be about a 0.42-acre gain in R-6.5 zone.

Rezone Required: Since an area of land zoned Mixed Use is being downzoned to R-6.5 and another portion is being up-zoned to Mixed Use, a rezone is required. The total affected area is about 3.17 acres with about 1.38 acres going from R-6.5 to Mixed Use and about 1.79 acres going from Mixed Use to R-6.5. MMC 22G.010.440 does allow for properties to make application to rezone property to a bordering zone without applying for a comprehensive plan map amendment if the proponent can demonstrate certain criteria per MMC 22G.010.440(2).

MMC 22G.010.440(1) *A zone reclassification shall be granted only if the applicant demonstrates that the proposal is consistent with the comprehensive plan and applicable functional plans and complies with the following criteria:*

(a) There is a demonstrated need for additional zoning as the type proposed;

The definition of "need" is to "require (something) because it is essential or very important". In this case, it is very important that first, parcels are aligned in a single zone. Added to this need is that the resulting zones allow for logical boundaries consistent with other adjacent boundaries. Another partial reason for this request is that a portion of the existing MU zone has a choke point between a corner of adjacent properties and the boundary of the existing MU zone. This adjustment allows for more efficient use of the MU Zone. Similar arguments are made in other areas of the site where leaving narrow areas of MU zoning behind existing uses would allow for land that could not be efficiently used as MU and would be more efficiently used as R-6.5 per the current proposed PRD Application.

While it may not be "essential" it is "very important" lands are formed that will allow for efficient uses. This would certainly be consistent with keeping in line with the goals of GMA.

(b) The zone reclassification is consistent and compatible with uses and zoning of the surrounding properties;

This is not really a "reclassification" of the zoning, it is simply a trade of area of the zoning on the surrounding properties as they currently exist. Compatibility was an issue of the original decisions to make these zoning classifications. This small trade of areas would not impact the compatibility with surrounding properties.

(c) There have been significant changes in the circumstances of the property to be rezoned or surrounding properties to warrant a change in classification;

Again, we are not asking for a change in "classification". We are just asking to adjust existing parcels and zoning boundaries to put each current zoning classification onto one parcel versus split zoning on one parcel. Second, we are wanting to adjust the zoning boundaries to more efficiently "line-up" with adjacent property uses and boundaries.

Since these parcels were originally classified, there has been changes in use and previous Boundary Line Adjustments that ended creating property lines and zoning boundaries that are in need of a little tweaking to make them more efficient.

(d) The property is practically and physically suited for the uses allowed in the proposed zone reclassification.

Again, this is not a request to reclassify zoning on any parcel. It is a request to tweak the boundaries of the current zoning to be consistent with surrounding land uses and property boundaries.

MMC 22G.010.440(2) *Property at the edges of land use districts can make application to rezone property to the bordering zone without applying for a comprehensive plan map amendment if the proponent can demonstrate:*

This property is at the "edge" of two land use districts and this proposal is requesting to trade areas of adjacent zoning classifications.

(a) The proposed land use district will provide a more effective transition point and edge for the proposed land use district than strict application of the comprehensive plan map would provide due to neighboring land uses, topography, access, parcel lines or other property characteristics;

The small tweaks requested have little impact on neighboring land uses and are internal to the property itself. This is not a change in land use districts or classifications. The same zoning is to be applied to each area but the internal boundary for those zones will be slightly altered.

(b) The proposed land use district supports and implements the goals, objectives, policies and text of the comprehensive plan more effectively than strict application of the comprehensive plan map; and

We are not changing the “land use district” or classification of the land use. Internally to the parcels involved and to the existing zoning classifications, we are asking for some adjustments to the boundaries and areas. We are essentially “swapping out” a small area zoned R-6.5 to make it MU and trading that area by rezoning a small area that is now MU to R-6.5.

This swap just makes the use of the land per each zoning more efficient without any compromise of to the goals, objectives, policies and text of the comprehensive plan. Since it is internal to the parcels involved, and not adjacent to a non-participating parcel, no other property is possibly impacted by a “change of use”.

Modifying the boundaries of these two existing “land use districts” does make each zone more useable. Making each area more usable is consistent with Comprehensive Plan Goal 18 which is to *“Encourage the creation of a more desirable place to live and a quality standard of living for all citizens.”*

(c) The proposed land use change will not affect an area greater than 10 acres, exclusive of critical areas. (Ord. 2981 § 23, 2015; Ord. 2898 § 17, 2012; Ord. 2852 § 10 (Exh. A), 2011. Formerly 22G.010.420).

The total affected area is about 3.17 acres with about 1.38 acres going from R-6.5 to Mixed Use and about 1.79 acres going from Mixed Use to R-6.5.

Thank you

Merle Ash

Amendment 1

CHICAGO TITLE INSURANCE COMPANY
a corporation, herein called the Company

GUARANTEES

MJS Investors LLC, a Washington limited liability company

herein called the Assured, against actual loss not exceeding the liability amount stated in Schedule A which the Assured shall sustain by reason of any incorrectness in the assurances set forth in Schedule A.

LIABILITY EXCLUSIONS AND LIMITATIONS

1. No guarantee is given nor liability assumed with respect to the identity of any party named or referred to in Schedule A or with respect to the validity, legal effect or priority of any matter shown therein.
2. The Company's liability hereunder shall be limited to the amount of actual loss sustained by the Assured because of reliance upon the assurance herein set forth, but in no event shall the Company's liability exceed the liability amount set forth in Schedule A.

Please note carefully the liability exclusions and limitations and the specific assurances afforded by this guarantee. If you wish additional liability, or assurances other than as contained herein, please contact the Company for further information as to the availability and cost.

$1,000.00	$350.00	$34.65

Effective Date: March 8, 2024 at 08:00 AM

The assurances referred to on the face page are:

That, according to those public records which, under the recording laws, impart constructive notice of matter relative to the following described property:

SEE EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF

Title to said real property is vested in:

Myron Gemmer, an unmarried man, and Bradley Gemmer, an unmarried man, as equal tenants in common

subject to the matters shown below under Exceptions, which Exceptions are not necessarily shown in the order of their priority.

END OF SCHEDULE A

EXHIBIT "A"

Legal Description

For APN/Parcel ID(s): 310519-004-009-00 and 310519-004-011-00 IOP

Parcel A of City of Marysville Boundary Line Adjustment BLA22-006 recorded under Auditor's File No. 202301195003, records of Snohomish County, Washington, more particularly described as follows:

Parcel A, as delineated on that survey recorded under Auditor's File No. 200409245129, records of Snohomish County, Washington;

Together with that portion of Parcel B, City of Marysville Boundary Line Adjustment No. BLA 06-004 recorded under Auditor's File No. 200701125006, records of Snohomish County, Washington, lying Westof the following described line:

Commencing at the South Quarter corner of Section 19, Township 31 North, Range 5 East of the Willamette Meridian;
thence South 89°56'19" East, along the South line of said Section, 662.05 feet;
thence North 00°47'10" West, 20.01 feet to the Southwesterly corner of Parcel B;
thence continuing North 00°47'10" West, along the Westerly line of said Parcel B, 175.02 feet to an angle point along said Westerly line and the Point of Beginning of the herein described line;
thence North 00°16'29" East 299.75 feet to the North line of the South 494.75 feet of said Section;
thence South 89°56'19" East, along said North line, 575.35 feet to a point that bears North 00°32'03 " East from the Northeast corner of Parcel A of said Boundary Line Adjustment;
thence North 00°32'03" East 846.43 feet to the North line of said Parcel B and the terminus of said described line;

EXCEPT that portion thereof conveyed to City of Marysville by deed recorded under Auditor's File No. 200805190267, records of Snohomish County, Washington.

Situate in the County of Snohomish, State of Washington.

SCHEDULE B

GENERAL EXCEPTIONS

A. Rights or claims of parties in possession, or claiming possession, not shown by the Public Records.

B. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land.

C. Easements, prescriptive rights, rights-of-way, liens or encumbrances, or claims thereof, not shown by the Public Records.

D. Any lien, or right to a lien, for contributions to employee benefit funds, or for state workers' compensation, or for services, labor, or material heretofore or hereafter furnished, all as imposed by law, and not shown by the Public Records.

E. Taxes or special assessments which are not yet payable or which are not shown as existing liens by the Public Records.

F. Any lien for service, installation, connection, maintenance, tap, capacity, or construction or similar charges for sewer, water, electricity, natural gas or other utilities, or for garbage collection and disposal not shown by the Public Records.

G. Unpatented mining claims, and all rights relating thereto.

H. Reservations and exceptions in United States Patents or in Acts authorizing the issuance thereof.

I. Indian tribal codes or regulations, Indian treaty or aboriginal rights, including easements or equitable servitudes.

J. Water rights, claims or title to water.

SCHEDULE B
(continued)

SPECIAL EXCEPTIONS

1. This item intentionally deleted.

2. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

   Granted to: Puget Sound Energy, Inc.
   Purpose: Electric transmission and/or distribution system
   Recording Date: October 26, 1929
   Recording No.: 464421
   Affects: Portion of said premises

3. Rights of the public to make necessary slopes for cuts or fills upon the Land in the reasonable original grading of streets, avenues, alleys and roads, as granted in deed to Snohomish County recorded February 28, 1966, under Auditor's File No. 1847825.

4. Rights of the public to make necessary slopes for cuts or fills upon the Land in the reasonable original grading of streets, avenues, alleys and roads, as granted in deed to Snohomish County , recorded May 31, 1966, under Auditor's File No. 1870393.

5. This item intentionally deleted.

6. This item intentionally deleted.

21. This item intentionally deleted.

22. This item intentionally deleted.

23. A deed of trust to secure an indebtedness in the amount shown below,

Amount: $4,143,115.44
Dated: September 28, 2016
Trustor/Grantor: Myron F. Gemmer, as a separate estate
Trustee: UPF Incorporated, a Washington corporation
Beneficiary: Coastal Community Bank, a Washington banking corporation, and Pacific Coast Bankers' Bank d/b/a Borrower's loan protection, a California banking corporation
Recording Date: September 28, 2016
Recording No.: 201609280660
Affects: Said premises and includes other property

24. Assignment of Rents and Leases

Assigned to: Coastal Community Bank, a Washington banking corporation, and Pacific Coast Bankers' Bank d/b/a Borrower's loan protection, a California banking corporation
Assigned by: Myron F. Gemmer, as a separate estate
Recording Date: September 28, 2016
Recording No: 201609280661
Affects: Said premises and includes other property

SCHEDULE B
(continued)

25. Subordination, Nondisturbance and Attornment Agreement, and the terms and conditions thereof:

Lender: Coastal Community Bank
Tenant: Dr. Michael Breneman (dba Cascadia Clinic LLC)
Landlord: Myron F. Gemmer
Recording Date: September 28, 2016
Recording No.: 201609280740

26. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by personal property account no. 2883899

Lessee: Cascadia Chiropractic and Massage

27. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by personal property account no. 2787787

Lessee: John McKeon & Associates Insurance and Financial Services

28. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by personal property account no. 0270652

Lessee: Bray's

29. Any unrecorded leaseholds, right of vendors and holders of security interests on personal property installed upon the Land and rights of tenants to remove trade fixtures at the expiration of the terms.

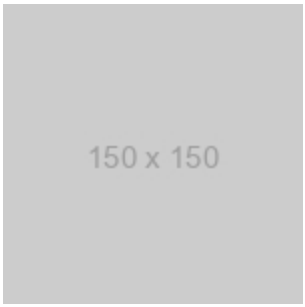
30. Agreement for Easements including the terms, covenants and provisions thereof

Recording Date: December 6, 2023
Recording No.: 202312060150, being a re-recording of 202311200211

31. Any rights, interests, or claims which may exist or arise by reason of the following matters disclosed by survey prepared by North Peak Associates LLC, dated January 3, 2024, designated Job No. 23-65

Matters shown:

A. Wetland delineated at Northwestern portion of the Land
B. Building extends 26.8 feet South over Southern boundary at Southeastern portion of the Land
C. Gravel driveways located primarily on adjoining parcels to the South extend over Southern and Eastern boundaries onto the Land
D. Telephone sentry and power pole lie outside of recorded easement area and/or without the benefit of a recorded easement North of Southern boundary
E. Intersection of 172nd Street NE and 11th Avenue NW rights-of-way cross through Southwestern corner of the Land
F. Overhead power line lies outside of recorded easement area and/or without the benefit of a recorded easement North of Southern boundary at Southwestern corner and East of Western boundary of the Land



SCHEDULE B
(continued)

32. Memorandum of Real Estate Purchase and Sale Agreement including the terms, covenants and provisions thereof

Recording Date: January 5, 2024
Recording No.: 202401050077

33. The Company's liability for this report is limited to $1,000.00. This report is based on the company's property records, and no liability is assumed for items misindexed or not indexed in the public records, or for matters which would be disclosed by an inquiry of the parties in possession or by an accurate survey or inspection of the premises. This report and the legal description given herein are based upon information supplied by the applicant as to the location and identification of the premises in question, and no liability is assumed for discrepancies resulting therefrom. This report does not represent either a commitment to insure title, an examination of, or opinion as to the sufficiency or effect of the matter shown, or an opinion as to the marketability of title to the subject premises.

Andrew Anderson, et ux
to
Puget Sound Power & Light Company

EASEMENT

THIS INDENTURE, made this 11th day of December, A.D.1928, between Andrew Anderson and Gina Anderson, his wife, hereinafter called the Grantors, parties of the first part, and PUGET SOUND POWER & LIGHT COMPANY, a Massachusetts corporation, hereinafter called the Grantee, party of the second part, WITNESSETH:

That the Grantors, for and in consideration of the sum of One and no/100 Dollars ($1.00) paid by the Grantee to the Grantors, receipt whereof is hereby acknowledged, hereby convey and grant to the Grantee, its successors and assigns, the right, privilege and authority to construct, erect, alter, improve, repair, operate and maintain an electric transmission and distribution line, consisting of a single line of poles, with necessary braces, guys, and anchors, and to place upon or suspend from such poles transmission, distribution and signal wires, insulators, cross-arms, transformers, and other necessary or convenient appurtenances, across, over and upon the following described lands and premises situated in the County of Snohomish, State

of Washington, to-wit:

The West half (W½) of the southwest quarter (SW¼) of the southeast quarter (SE¼) less the West twenty (20) feet, in Section Nineteen (19) Township Thirty-one (31) N.Range Five (5) E.W.M. The center line of said transmission and distribution line to be located as follows:

Three feet east of the east side of the strip reserved for road; thence north 1300 feet more or less.

Together with the right at all times to the Grantee, its successors and assigns, of ingress to and egress from said lands across adjacent lands of the Grantors for the purpose of constructing, reconstructing, repairing, renewing, altering, changing, patrolling and operating said line, and the right at any time to remove said poles, wires and appurtenances from said lands.

Also the right to the Grantee, its successors and assigns, at all times to cut all brush and timber, and trim all trees standing or growing upon said lands which, in the opinion of the Grantee, constitute a menace or danger to said line.

The Grantors, their heirs, successors or assigns, covenant and agree that they will not do any blasting or discharge any explosives within a distance of three hundred (300) feet of said line without giving reasonable notice in writing to the Grantee, its successors or assigns of intention so to do.

The rights, title, privileges and authority hereby granted shall continue and be in force until such times as the Grantee, its successors or assigns, shall permanently remove said poles, wires and appurtenances from said lands, or shall otherwise permanently abandon said line, at which time all such rights, title, privileges and authority hereby granted shall terminate.

IN WITNESS WHEREOF, the parties of the first part have signed and executed this instrument the day and year first above written.

SNOHOMISH COUNTY "RIGHT TO FARM" DISCLOSURE STATEMENT

Name of Transferor: Martenson Family LLC

Name of Transferee: ~~Gemmer, Bradley K.~~

Legal Description of Property (Attach an addendum if additional space is needed):

See attached Exhibit "A", made a part hereof.
Tax No: 310519-004-009-00
4165
OLD REPUBLIC TITLE LTD
Abrev. Legal: Ptn. SW 1/4 of SE 1/4 of Sec. 19, Twn. 31, Rng. 5, Snd Co. 07-98152-1

A. INSTRUCTIONS:

1. This Disclosure Statement must be provided to the Transferee whenever there is a *transfer* of (1) real property designated as farmland or (2) real property adjacent to or within 1300 feet of designated farmland. This Disclosure Statement applies to transfers by sale, exchange, gift, real estate contract, lease with option to purchase, any other option to purchase, or any other means of transfer (except transfers made by testamentary provisions or the laws of descent).
2. The Transferor must provide the Transferee a copy of this Disclosure Statement prior to closing.
3. The Transferor must record a copy of this Disclosure Statement, showing an acknowledgment of receipt executed by the Transferee, with the Snohomish County Auditor prior to closing.
4. Fill in the names of the Transferor (Seller) and Transferee (Buyer) prior to recording this form.

B. DISCLOSURE: Your real property is within, adjacent to, or within 1300 feet of designated farmland; therefore, you may be subject to inconveniences or discomforts arising from agricultural activities, INCLUDING BUT NOT LIMITED TO NOISE, ODORS, FUMES, DUST, SMOKE, THE OPERATION OF MACHINERY OF ANY KIND (INCLUDING AIRCRAFT), THE STORAGE AND DISPOSAL OF MANURE, THE APPLICATION BY SPRAYING OR OTHERWISE OF CHEMICAL OR ORGANIC FERTILIZERS, SOIL AMENDMENT, HERBICIDES AND PESTICIDES, HOURS OF OPERATION, AND OTHER AGRICULTURAL ACTIVITIES. Snohomish County has adopted an Agricultural Lands Regulation (chapter 30.32B SCC) which may affect you and your land. You may obtain a copy of chapter 30.32B from Snohomish County.

A provision of Chapter 30.32B SCC provides, "Agricultural activities conducted on designated farmlands in compliance with acceptable agriculture practices and established prior to surrounding non-agricultural activities are presumed to be reasonable and shall not be found to constitute a nuisance unless the activities have a substantial adverse effect on the public health and safety."

This disclosure applies to the real property upon any development or building permit approval; or, in the case of real property transfers, the disclosure applies to the subject property as of the date of the transfer. This disclosure may not be applicable thereafter if areas designated farmland are changed from the farmland designation.

Nothing in Chapter 30.32B SCC shall affect or impair any right to sue for damages.

BOTH SITUATE in the County of Snohomish, State of Washington.

The Real Property or its address is commonly known as 1333 and 1507 172nd Street NE, AND, 1411 172nd Street NE, Marysville, WA 98271. The Real Property tax identification number is 310519-004-011-00 and 310519-004-010-00.

CROSS-COLLATERALIZATION. In addition to the Note, this Deed of Trust secures all obligations, debts and liabilities, plus interest thereon, of either Grantor or Borrower to Lender, or any one or more of them, as well as all claims by Lender against Borrower and Grantor or any one or more of them, whether now existing or hereafter arising, whether related or unrelated to the purpose of the Note, whether voluntary or otherwise, whether due or not due, direct or indirect, determined or undetermined, absolute or contingent, liquidated or unliquidated, whether Borrower or Grantor may be liable individually or jointly with others, whether obligated as guarantor, surety, accommodation party or otherwise, and whether recovery upon such amounts may be or hereafter may become barred by any statute of limitations, and whether the obligation to repay such amounts may be or hereafter may become otherwise unenforceable.

FUTURE ADVANCES. In addition to the Note, this Deed of Trust secures all future advances made by Lender to Borrower or Grantor whether or not the advances are made pursuant to a commitment. Specifically, without limitation, this Deed of Trust secures, in addition to the amounts specified in the Note, all future amounts Lender in its discretion may loan to Borrower or Grantor, together with all interest thereon.

Grantor hereby assigns as security to Lender, all of Grantor's right, title, and interest in and to all leases, Rents, and profits of the Property. This assignment is recorded in accordance with RCW 65.08.070; the lien created by this assignment is intended to be specific, perfected and choate upon the recording of this Deed of Trust. Lender grants to Grantor a license to collect the Rents and profits, which license may be revoked at Lender's option and shall be automatically revoked upon acceleration of all or part of the Indebtedness. In addition, Grantor grants to Lender a Uniform Commercial Code security interest in the Personal Property and Rents.

THIS DEED OF TRUST, INCLUDING THE ASSIGNMENT OF RENTS AND THE SECURITY INTEREST IN THE RENTS AND PERSONAL PROPERTY, IS GIVEN TO SECURE (A) PAYMENT OF THE INDEBTEDNESS AND (B) PERFORMANCE OF ANY AND ALL OBLIGATIONS UNDER THIS DEED OF TRUST. THIS DEED OF TRUST IS GIVEN AND ACCEPTED ON THE FOLLOWING TERMS:

GRANTOR'S REPRESENTATIONS AND WARRANTIES. Grantor warrants that: (a) this Deed of Trust is executed at Borrower's request and not at the request of Lender; (b) Grantor has the full power, right, and authority to enter into this Deed of Trust and to hypothecate the Property; (c) the provisions of this Deed of Trust do not conflict with, or result in a default under any agreement or other instrument binding upon Grantor and do not result in a violation of any law, regulation, court decree or order applicable to Grantor; (d) Grantor has established adequate means of obtaining from Borrower on a continuing basis information about Borrower's financial condition; and (e) Lender has made no representation to Grantor about Borrower (including without limitation the creditworthiness of Borrower).

GRANTOR'S WAIVERS. Grantor waives all rights or defenses arising by reason of any "one action" or "anti-deficiency" law, or any other law which may prevent Lender from bringing any action against Grantor, including a claim for deficiency to the extent Lender is otherwise entitled to a claim for deficiency, before or after Lender's commencement or completion of any foreclosure action, either judicially or by exercise of a power of sale.

PAYMENT AND PERFORMANCE. Except as otherwise provided in this Deed of Trust, Borrower and Grantor shall pay to Lender all Indebtedness secured by this Deed of Trust as it becomes due, and Borrower and Grantor shall strictly perform all their respective obligations under the Note, this Deed of Trust, and the Related Documents.

POSSESSION AND MAINTENANCE OF THE PROPERTY. Borrower and Grantor agree that Borrower's and Grantor's possession and use of the Property shall be governed by the following provisions:

Possession and Use. Until the occurrence of an Event of Default, Grantor may (1) remain in possession and control of the Property; (2) use, operate or manage the Property; and (3) collect the Rents from the Property (this privilege is a license from Lender to Grantor automatically revoked upon default). The following provisions relate to the use of the Property or to other limitations on the Property. The Real Property is not used principally for agricultural purposes.

Duty to Maintain. Grantor shall maintain the Property in tenantable condition and promptly perform all repairs, replacements, and maintenance necessary to preserve its value.

Nuisance, Waste. Grantor shall not cause, conduct or permit any nuisance nor commit, permit, or suffer any stripping of or waste on or to the Property or any portion of the Property. Without limiting the generality of the foregoing, Grantor will not remove, or grant to any other party the right to remove, any timber, minerals (including oil and gas), coal, clay, scoria, soil, gravel or rock products without Lender's prior written consent.

Removal of Improvements. Grantor shall not demolish or remove any Improvements from the Real Property without Lender's prior written consent. As a condition to the removal of any Improvements, Lender may require Grantor to make arrangements satisfactory to Lender to replace such Improvements with Improvements of at least equal value.

Lender's Right to Enter. Lender and Lender's agents and representatives may enter upon the Real Property at all reasonable times to attend to Lender's interests and to inspect the Real Property for purposes of Grantor's compliance with the terms and conditions of this Deed of Trust.

Compliance with Governmental Requirements. Grantor shall promptly comply, and shall promptly cause compliance by all agents, tenants or other persons or entities of every nature whatsoever who rent, lease or otherwise use or occupy the Property in any manner, with all laws, ordinances, and regulations, now or hereafter in effect, of all governmental authorities applicable to the use or occupancy of the Property, including without limitation, the Americans With Disabilities Act. Grantor may contest in good faith any such law, ordinance, or regulation and withhold compliance during any

proceeding, including appropriate appeals, so long as Grantor has notified Lender in writing prior to doing so and so long as, in Lender's sole opinion, Lender's interests in the Property are not jeopardized. Lender may require Grantor to post adequate security or a surety bond, reasonably satisfactory to Lender, to protect Lender's interest.

Duty to Protect. Grantor agrees neither to abandon or leave unattended the Property. Grantor shall do all other acts, in addition to those acts set forth above in this section, which from the character and use of the Property are reasonably necessary to protect and preserve the Property.

DUE ON SALE - CONSENT BY LENDER. Lender may, at Lender's option, (A) declare immediately due and payable all sums secured by this Deed of Trust or (B) increase the interest rate provided for in the Note or other document evidencing the Indebtedness and impose such other conditions as Lender deems appropriate, upon the sale or transfer, without Lender's prior written consent, of all or any part of the Real Property, or any interest in the Real Property. A "sale or transfer" means the conveyance of Real Property or any right, title or interest in the Real Property; whether legal, beneficial or equitable; whether voluntary or involuntary; whether by outright sale, deed, installment sale contract, land contract, contract for deed, leasehold interest with a term greater than three (3) years, lease-option contract, or by sale, assignment, or transfer of any beneficial interest in or to any land trust holding title to the Real Property, or by any other method of conveyance of an interest in the Real Property. If any Grantor is a corporation, partnership or limited liability company, transfer also includes any change in ownership of more than twenty-five percent (25%) of the voting stock, partnership interests or limited liability company interests, as the case may be, of such Grantor. However, this option shall not be exercised by Lender if such exercise is prohibited by federal law or by Washington law.

TAXES AND LIENS. The following provisions relating to the taxes and liens on the Property are part of this Deed of Trust:

Payment. Grantor shall pay when due (and in all events prior to delinquency) all taxes, special taxes, assessments, charges (including water and sewer), fines and impositions levied against or on account of the Property, and shall pay when due all claims for work done on or for services rendered or material furnished to the Property. Grantor shall maintain the Property free of all liens having priority over or equal to the interest of Lender under this Deed of Trust, except for the lien of taxes and assessments not due and except as otherwise provided in this Deed of Trust.

Right to Contest. Grantor may withhold payment of any tax, assessment, or claim in connection with a good faith dispute over the obligation to pay, so long as Lender's interest in the Property is not jeopardized. If a lien arises or is filed as a result of nonpayment, Grantor shall within fifteen (15) days after the lien arises or, if a lien is filed, within fifteen (15) days after Grantor has notice of the filing, secure the discharge of the lien, or if requested by Lender, deposit with Lender cash or a sufficient corporate surety bond or other security satisfactory to Lender in an amount sufficient to discharge the lien plus any costs and attorneys' fees, or other charges that could accrue as a result of a foreclosure or sale under the lien. In any contest, Grantor shall defend itself and Lender and shall satisfy any adverse judgment before enforcement against the Property. Grantor shall name Lender as an additional obligee under any surety bond furnished in the contest proceedings.

Evidence of Payment. Grantor shall upon demand furnish to Lender satisfactory evidence of payment of the taxes or assessments and shall authorize the appropriate governmental official to deliver to Lender at any time a written statement of the taxes and assessments against the Property.

Notice of Construction. Grantor shall notify Lender at least fifteen (15) days before any work is commenced, any services are furnished, or any materials are supplied to the Property, if any mechanic's lien, materialmen's lien, or other lien could be asserted on account of the work, services, or materials. Grantor will upon request of Lender furnish to Lender advance assurances satisfactory to Lender that Grantor can and will pay the cost of such improvements.

PROPERTY DAMAGE INSURANCE. The following provisions relating to insuring the Property are a part of this Deed of Trust.

Maintenance of Insurance. Grantor shall procure and maintain policies of fire insurance with standard extended coverage endorsements on a replacement basis for the full insurable value covering all Improvements on the Real Property in an amount sufficient to avoid application of any coinsurance clause, and with a standard mortgagee clause in favor of Lender. Grantor shall also procure and maintain comprehensive general liability insurance in such coverage amounts as Lender may request with Trustee and Lender being named as additional insureds in such liability insurance policies. Additionally, Grantor shall maintain such other insurance, including but not limited to hazard, business interruption, and boiler insurance, as Lender may reasonably require. Policies shall be written in form, amounts, coverages and basis reasonably acceptable to Lender and issued by a company or companies reasonably acceptable to Lender. Grantor, upon request of Lender, will deliver to Lender from time to time the policies or certificates of insurance in form satisfactory to Lender, including stipulations that coverages will not be cancelled or diminished without at least fifteen (15) days prior written notice to Lender. Each insurance policy also shall include an endorsement providing that coverage in favor of Lender will not be impaired in any way by any act, omission or default of Grantor or any other person. Should the Real Property be located in an area designated by the Administrator of the Federal Emergency Management Agency as a special flood hazard area, Grantor agrees to obtain and maintain Federal Flood Insurance, if available, within 45 days after notice is given by Lender that the Property is located in a special flood hazard area, for the full unpaid principal balance of the loan and any prior liens on the property securing the loan, up to the maximum policy limits set under the National Flood Insurance Program, or as otherwise required by Lender, and to maintain such insurance for the term of the loan.

Application of Proceeds. Grantor shall promptly notify Lender of any loss or damage to the Property if the estimated cost of repair or replacement exceeds $500.00. Lender may make proof of loss if Grantor fails to do so within fifteen (15) days of the casualty. Whether or not Lender's security is impaired, Lender may, at Lender's election, receive and retain the proceeds of any insurance and apply the proceeds to the reduction of the Indebtedness, payment of any lien affecting the Property, or the restoration and repair of the Property. If Lender elects to apply the proceeds to restoration and

repair, Grantor shall repair or replace the damaged or destroyed Improvements in a manner satisfactory to Lender. Lender shall, upon satisfactory proof of such expenditure, pay or reimburse Grantor from the proceeds for the reasonable cost of repair or restoration if Grantor is not in default under this Deed of Trust. Any proceeds which have not been disbursed within 180 days after their receipt and which Lender has not committed to the repair or restoration of the Property shall be used first to pay any amount owing to Lender under this Deed of Trust, then to pay accrued interest, and the remainder, if any, shall be applied to the principal balance of the Indebtedness. If Lender holds any proceeds after payment in full of the Indebtedness, such proceeds shall be paid without interest to Grantor as Grantor's interests may appear.

Grantor's Report on Insurance. Upon request of Lender, however not more than once a year, Grantor shall furnish to Lender a report on each existing policy of insurance showing: (1) the name of the insurer; (2) the risks insured; (3) the amount of the policy; (4) the property insured, the then current replacement value of such property, and the manner of determining that value; and (5) the expiration date of the policy. Grantor shall, upon request of Lender, have an independent appraiser satisfactory to Lender determine the cash value replacement cost of the Property.

LENDER'S EXPENDITURES. If any action or proceeding is commenced that would materially affect Lender's interest in the Property or if Grantor fails to comply with any provision of this Deed of Trust or any Related Documents, including but not limited to Grantor's failure to discharge or pay when due any amounts Grantor is required to discharge or pay under this Deed of Trust or any Related Documents, Lender on Grantor's behalf may (but shall not be obligated to) take any action that Lender deems appropriate, including but not limited to discharging or paying all taxes, liens, security interests, encumbrances and other claims, at any time levied or placed on the Property and paying all costs for insuring, maintaining and preserving the Property. All such expenditures incurred or paid by Lender for such purposes will then bear interest at the rate charged under the Note from the date incurred or paid by Lender to the date of repayment by Grantor. All such expenses will become a part of the Indebtedness and, at Lender's option, will (A) be payable on demand; (B) be added to the balance of the Note and be apportioned among and be payable with any installment payments to become due during either (1) the term of any applicable insurance policy; or (2) the remaining term of the Note; or (C) be treated as a balloon payment which will be due and payable at the Note's maturity. The Deed of Trust also will secure payment of these amounts. Such right shall be in addition to all other rights and remedies to which Lender may be entitled upon Default.

WARRANTY; DEFENSE OF TITLE. The following provisions relating to ownership of the Property are a part of this Deed of Trust:

Title. Grantor warrants that: (a) Grantor holds good and marketable title of record to the Property in fee simple, free and clear of all liens and encumbrances other than those set forth in the Real Property description or in any title insurance policy, title report, or final title opinion issued in favor of, and accepted by, Lender in connection with this Deed of Trust, and (b) Grantor has the full right, power, and authority to execute and deliver this Deed of Trust to Lender.

Defense of Title. Subject to the exception in the paragraph above, Grantor warrants and will forever defend the title to the Property against the lawful claims of all persons. In the event any action or proceeding is commenced that questions Grantor's title or the interest of Trustee or Lender under this Deed of Trust, Grantor shall defend the action at Grantor's expense. Grantor may be the nominal party in such proceeding, but Lender shall be entitled to participate in the proceeding and to be represented in the proceeding by counsel of Lender's own choice, and Grantor will deliver, or cause to be delivered, to Lender such instruments as Lender may request from time to time to permit such participation.

Compliance With Laws. Grantor warrants that the Property and Grantor's use of the Property complies with all existing applicable laws, ordinances, and regulations of governmental authorities.

Survival of Representations and Warranties. All representations, warranties, and agreements made by Grantor in this Deed of Trust shall survive the execution and delivery of this Deed of Trust, shall be continuing in nature, and shall remain in full force and effect until such time as Borrower's Indebtedness shall be paid in full.

CONDEMNATION. The following provisions relating to condemnation proceedings are a part of this Deed of Trust:

Proceedings. If any proceeding in condemnation is filed, Grantor shall promptly notify Lender in writing, and Grantor shall promptly take such steps as may be necessary to defend the action and obtain the award. Grantor may be the nominal party in such proceeding, but Lender shall be entitled to participate in the proceeding and to be represented in the proceeding by counsel of its own choice all at Grantor's expense, and Grantor will deliver or cause to be delivered to Lender such instruments and documentation as may be requested by Lender from time to time to permit such participation.

Application of Net Proceeds. If all or any part of the Property is condemned by eminent domain proceedings or by any proceeding or purchase in lieu of condemnation, Lender may at its election require that all or any portion of the net proceeds of the award be applied to the Indebtedness or the repair or restoration of the Property. The net proceeds of the award shall mean the award after payment of all reasonable costs, expenses, and attorneys' fees incurred by Trustee or Lender in connection with the condemnation.

IMPOSITION OF TAXES, FEES AND CHARGES BY GOVERNMENTAL AUTHORITIES. The following provisions relating to governmental taxes, fees and charges are a part of this Deed of Trust:

Current Taxes, Fees and Charges. Upon request by Lender, Grantor shall execute such documents in addition to this Deed of Trust and take whatever other action is requested by Lender to perfect and continue Lender's lien on the Real Property. Grantor shall reimburse Lender for all taxes, as described below, together with all expenses incurred in recording, perfecting or continuing this Deed of Trust, including without limitation all taxes, fees, documentary stamps, and other charges for recording or registering this Deed of Trust.

Taxes. The following shall constitute taxes to which this section applies: (1) a specific tax upon this type of Deed of Trust or upon all or any part of the Indebtedness secured by this Deed of Trust; (2) a specific tax on Borrower which

Borrower is authorized or required to deduct from payments on the Indebtedness secured by this type of Deed of Trust; (3) a tax on this type of Deed of Trust chargeable against the Lender or the holder of the Note; and (4) a specific tax on all or any portion of the Indebtedness or on payments of principal and interest made by Borrower.

Subsequent Taxes. If any tax to which this section applies is enacted subsequent to the date of this Deed of Trust, this event shall have the same effect as an Event of Default, and Lender may exercise any or all of its available remedies for an Event of Default as provided below unless Grantor either (1) pays the tax before it becomes delinquent, or (2) contests the tax as provided above in the Taxes and Liens section and deposits with Lender cash or a sufficient corporate surety bond or other security satisfactory to Lender.

SECURITY AGREEMENT; FINANCING STATEMENTS. The following provisions relating to this Deed of Trust as a security agreement are a part of this Deed of Trust:

Security Agreement. This instrument shall constitute a Security Agreement to the extent any of the Property constitutes fixtures, and Lender shall have all of the rights of a secured party under the Uniform Commercial Code as amended from time to time.

Security Interest. Upon request by Lender, Grantor shall take whatever action is requested by Lender to perfect and continue Lender's security interest in the Rents and Personal Property. In addition to recording this Deed of Trust in the real property records, Lender may, at any time and without further authorization from Grantor, file executed counterparts, copies or reproductions of this Deed of Trust as a financing statement. Grantor shall reimburse Lender for all expenses incurred in perfecting or continuing this security interest. Upon default, Grantor shall not remove, sever or detach the Personal Property from the Property. Upon default, Grantor shall assemble any Personal Property not affixed to the Property in a manner and at a place reasonably convenient to Grantor and Lender and make it available to Lender within three (3) days after receipt of written demand from Lender to the extent permitted by applicable law.

Addresses. The mailing addresses of Grantor (debtor) and Lender (secured party) from which information concerning the security interest granted by this Deed of Trust may be obtained (each as required by the Uniform Commercial Code) are as stated on the first page of this Deed of Trust.

FURTHER ASSURANCES; ATTORNEY-IN-FACT. The following provisions relating to further assurances and attorney-in-fact are a part of this Deed of Trust:

Further Assurances. At any time, and from time to time, upon request of Lender, Grantor will make, execute and deliver, or will cause to be made, executed or delivered, to Lender or to Lender's designee, and when requested by Lender, cause to be filed, recorded, refiled, or rerecorded, as the case may be, at such times and in such offices and places as Lender may deem appropriate, any and all such mortgages, deeds of trust, security deeds, security agreements, financing statements, continuation statements, instruments of further assurance, certificates, and other documents as may, in the sole opinion of Lender, be necessary or desirable in order to effectuate, complete, perfect, continue, or preserve (1) Borrower's and Grantor's obligations under the Note, this Deed of Trust, and the Related Documents, and (2) the liens and security interests created by this Deed of Trust as first and prior liens on the Property, whether now owned or hereafter acquired by Grantor. Unless prohibited by law or Lender agrees to the contrary in writing, Grantor shall reimburse Lender for all costs and expenses incurred in connection with the matters referred to in this paragraph.

Attorney-in-Fact. If Grantor fails to do any of the things referred to in the preceding paragraph, Lender may do so for and in the name of Grantor and at Grantor's expense. For such purposes, Grantor hereby irrevocably appoints Lender as Grantor's attorney-in-fact for the purpose of making, executing, delivering, filing, recording, and doing all other things as may be necessary or desirable, in Lender's sole opinion, to accomplish the matters referred to in the preceding paragraph.

FULL PERFORMANCE. If Borrower and Grantor pay all the Indebtedness, including without limitation all future advances, when due, and Grantor otherwise performs all the obligations imposed upon Grantor under this Deed of Trust, Lender shall execute and deliver to Trustee a request for full reconveyance and shall execute and deliver to Grantor suitable statements of termination of any financing statement on file evidencing Lender's security interest in the Rents and the Personal Property. Any reconveyance fee shall be paid by Grantor, if permitted by applicable law. The grantee in any reconveyance may be described as the "person or persons legally entitled thereto", and the recitals in the reconveyance of any matters or facts shall be conclusive proof of the truthfulness of any such matters or facts.

EVENTS OF DEFAULT. Each of the following, at Lender's option, shall constitute an Event of Default under this Deed of Trust:

Payment Default. Borrower fails to make any payment when due under the Indebtedness.

Other Defaults. Borrower or Grantor fails to comply with or to perform any other term, obligation, covenant or condition contained in this Deed of Trust or in any of the Related Documents or to comply with or to perform any term, obligation, covenant or condition contained in any other agreement between Lender and Borrower or Grantor.

Compliance Default. Failure to comply with any other term, obligation, covenant or condition contained in this Deed of Trust, the Note or in any of the Related Documents.

Default on Other Payments. Failure of Grantor within the time required by this Deed of Trust to make any payment for taxes or insurance, or any other payment necessary to prevent filing of or to effect discharge of any lien.

Default in Favor of Third Parties. Should Borrower or any Grantor default under any loan, extension of credit, security agreement, purchase or sales agreement, or any other agreement, in favor of any other creditor or person that may materially affect any of Borrower's or any Grantor's property or Borrower's ability to repay the Indebtedness or Borrower's or Grantor's ability to perform their respective obligations under this Deed of Trust or any of the Related Documents.

False Statements. Any warranty, representation or statement made or furnished to Lender by Borrower or Grantor or on Borrower's or Grantor's behalf under this Deed of Trust or the Related Documents is false or misleading in any material respect, either now or at the time made or furnished or becomes false or misleading at any time thereafter.

Defective Collateralization. This Deed of Trust or any of the Related Documents ceases to be in full force and effect (including failure of any collateral document to create a valid and perfected security interest or lien) at any time and for any reason.

Death or Insolvency. The dissolution of Grantor's (regardless of whether election to continue is made), any member withdraws from the limited liability company, or any other termination of Borrower's or Grantor's existence as a going business or the death of any member, the insolvency of Borrower or Grantor, the appointment of a receiver for any part of Borrower's or Grantor's property, any assignment for the benefit of creditors, any type of creditor workout, or the commencement of any proceeding under any bankruptcy or insolvency laws by or against Borrower or Grantor.

Creditor or Forfeiture Proceedings. Commencement of foreclosure or forfeiture proceedings, whether by judicial proceeding, self-help, repossession or any other method, by any creditor of Borrower or Grantor or by any governmental agency against any property securing the Indebtedness. This includes a garnishment of any of Borrower's or Grantor's accounts, including deposit accounts, with Lender. However, this Event of Default shall not apply if there is a good faith dispute by Borrower or Grantor as to the validity or reasonableness of the claim which is the basis of the creditor or forfeiture proceeding and if Borrower or Grantor gives Lender written notice of the creditor or forfeiture proceeding and deposits with Lender monies or a surety bond for the creditor or forfeiture proceeding, in an amount determined by Lender, in its sole discretion, as being an adequate reserve or bond for the dispute.

Breach of Other Agreement. Any breach by Borrower or Grantor under the terms of any other agreement between Borrower or Grantor and Lender that is not remedied within any grace period provided therein, including without limitation any agreement concerning any indebtedness or other obligation of Borrower or Grantor to Lender, whether existing now or later.

Events Affecting Guarantor. Any of the preceding events occurs with respect to any Guarantor of any of the Indebtedness or any Guarantor dies or becomes incompetent, or revokes or disputes the validity of, or liability under, any Guaranty of the Indebtedness.

Adverse Change. A material adverse change occurs in Borrower's or Grantor's financial condition, or Lender believes the prospect of payment or performance of the Indebtedness is impaired.

Insecurity. Lender in good faith believes itself insecure.

Right to Cure. If any default, other than a default in payment, is curable and if Grantor has not been given a notice of a breach of the same provision of this Deed of Trust within the preceding twelve (12) months, it may be cured if Grantor, after Lender sends written notice to Borrower demanding cure of such default: (1) cures the default within ten (10) days; or (2) if the cure requires more than ten (10) days, immediately initiates steps which Lender deems in Lender's sole discretion to be sufficient to cure the default and thereafter continues and completes all reasonable and necessary steps sufficient to produce compliance as soon as reasonably practical.

RIGHTS AND REMEDIES ON DEFAULT. If an Event of Default occurs under this Deed of Trust, at any time thereafter, Trustee or Lender may exercise any one or more of the following rights and remedies:

Election of Remedies. Election by Lender to pursue any remedy shall not exclude pursuit of any other remedy, and an election to make expenditures or to take action to perform an obligation of Grantor under this Deed of Trust, after Grantor's failure to perform, shall not affect Lender's right to declare a default and exercise its remedies.

Accelerate Indebtedness. Lender shall have the right at its option to declare the entire Indebtedness immediately due and payable, including any prepayment penalty which Borrower would be required to pay.

Foreclosure. With respect to all or any part of the Real Property, the Trustee shall have the right to exercise its power of sale and to foreclose by notice and sale, and Lender shall have the right to foreclose by judicial foreclosure, in either case in accordance with and to the full extent provided by applicable law.

UCC Remedies. With respect to all or any part of the Personal Property, Lender shall have all the rights and remedies of a secured party under the Uniform Commercial Code.

Collect Rents. Lender shall have the right, without notice to Borrower or Grantor to take possession of and manage the Property and collect the Rents, including amounts past due and unpaid, and apply the net proceeds, over and above Lender's costs, against the Indebtedness. In furtherance of this right, Lender may require any tenant or other user of the Property to make payments of rent or use fees directly to Lender. If the Rents are collected by Lender, then Grantor irrevocably designates Lender as Grantor's attorney-in-fact to endorse instruments received in payment thereof in the name of Grantor and to negotiate the same and collect the proceeds. Payments by tenants or other users to Lender in response to Lender's demand shall satisfy the obligations for which the payments are made, whether or not any proper grounds for the demand existed. Lender may exercise its rights under this subparagraph either in person, by agent, or through a receiver.

Appoint Receiver. Lender shall have the right to have a receiver appointed to take possession of all or any part of the Property, with the power to protect and preserve the Property, to operate the Property preceding or pending foreclosure or sale, and to collect the Rents from the Property and apply the proceeds, over and above the cost of the receivership, against the Indebtedness. The receiver may serve without bond if permitted by law. Lender's right to the appointment of a receiver shall exist whether or not the apparent value of the Property exceeds the Indebtedness by a substantial amount. Employment by Lender shall not disqualify a person from serving as a receiver.

Tenancy at Sufferance. If Grantor remains in possession of the Property after the Property is sold as provided above or Lender otherwise becomes entitled to possession of the Property upon default of Borrower or Grantor, Grantor shall become a tenant at sufferance of Lender or the purchaser of the Property and shall, at Lender's option, either (1) pay a reasonable rental for the use of the Property, or (2) vacate the Property immediately upon the demand of Lender.

Other Remedies. Trustee or Lender shall have any other right or remedy provided in this Deed of Trust or the Note or available at law or in equity.

Notice of Sale. Lender shall give Grantor reasonable notice of the time and place of any public sale of the Personal Property or of the time after which any private sale or other intended disposition of the Personal Property is to be made. Reasonable notice shall mean notice given at least ten (10) days before the time of the sale or disposition. Any sale of the Personal Property may be made in conjunction with any sale of the Real Property.

Sale of the Property. To the extent permitted by applicable law, Borrower and Grantor hereby waives any and all rights to have the Property marshalled. In exercising its rights and remedies, the Trustee or Lender shall be free to sell all or any part of the Property together or separately, in one sale or by separate sales. Lender shall be entitled to bid at any public sale on all or any portion of the Property.

Attorneys' Fees; Expenses. If Lender institutes any suit or action to enforce any of the terms of this Deed of Trust, Lender shall be entitled to recover such sum as the court may adjudge reasonable as attorneys' fees at trial and upon any appeal. Whether or not any court action is involved, and to the extent not prohibited by law, all reasonable expenses Lender incurs that in Lender's opinion are necessary at any time for the protection of its interest or the enforcement of its rights shall become a part of the Indebtedness payable on demand and shall bear interest at the Note rate from the date of the expenditure until repaid. Expenses covered by this paragraph include, without limitation, however subject to any limits under applicable law, Lender's attorneys' fees and Lender's legal expenses, whether or not there is a lawsuit, including attorneys' fees and expenses for bankruptcy proceedings (including efforts to modify or vacate any automatic stay or injunction), appeals, and any anticipated post-judgment collection services, the cost of searching records, obtaining title reports (including foreclosure reports), surveyors' reports, and appraisal fees, title insurance, and fees for the Trustee, to the extent permitted by applicable law. Grantor also will pay any court costs, in addition to all other sums provided by law.

Rights of Trustee. Trustee shall have all of the rights and duties of Lender as set forth in this section.

POWERS AND OBLIGATIONS OF TRUSTEE. The following provisions relating to the powers and obligations of Trustee (pursuant to Lender's instructions) are part of this Deed of Trust:

Powers of Trustee. In addition to all powers of Trustee arising as a matter of law, Trustee shall have the power to take the following actions with respect to the Property upon the written request of Lender and Grantor: (a) join in preparing and filing a map or plat of the Real Property, including the dedication of streets or other rights to the public; (b) join in granting any easement or creating any restriction on the Real Property; and (c) join in any subordination or other agreement affecting this Deed of Trust or the interest of Lender under this Deed of Trust.

Obligations to Notify. Trustee shall not be obligated to notify any other party of a pending sale under any other trust deed or lien, or of any action or proceeding in which Grantor, Lender, or Trustee shall be a party, unless required by applicable law, or unless the action or proceeding is brought by Trustee.

Trustee. Trustee shall meet all qualifications required for Trustee under applicable law. In addition to the rights and remedies set forth above, with respect to all or any part of the Property, the Trustee shall have the right to foreclose by notice and sale, and Lender shall have the right to foreclose by judicial foreclosure, in either case in accordance with and to the full extent provided by applicable law.

Successor Trustee. Lender, at Lender's option, may from time to time appoint a successor Trustee to any Trustee appointed under this Deed of Trust by an instrument executed and acknowledged by Lender and recorded in the office of the recorder of Snohomish County, State of Washington. The instrument shall contain, in addition to all other matters required by state law, the names of the original Lender, Trustee, and Grantor, the book and page or the Auditor's File Number where this Deed of Trust is recorded, and the name and address of the successor trustee, and the instrument shall be executed and acknowledged by Lender or its successors in interest. The successor trustee, without conveyance of the Property, shall succeed to all the title, power, and duties conferred upon the Trustee in this Deed of Trust and by applicable law. This procedure for substitution of Trustee shall govern to the exclusion of all other provisions for substitution.

NOTICES. Subject to applicable law, and except for notice required or allowed by law to be given in another manner, any notice required to be given under this Deed of Trust, including without limitation any notice of default and any notice of sale shall be given in writing, and shall be effective when actually delivered, when actually received by telefacsimile (unless otherwise required by law), when deposited with a nationally recognized overnight courier, or, if mailed, when deposited in the United States mail, as first class, certified or registered mail postage prepaid, directed to the addresses shown near the beginning of this Deed of Trust. All copies of notices of foreclosure from the holder of any lien which has priority over this Deed of Trust shall be sent to Lender's address, as shown near the beginning of this Deed of Trust. Any party may change its address for notices under this Deed of Trust by giving formal written notice to the other parties, specifying that the purpose of the notice is to change the party's address. For notice purposes, Grantor agrees to keep Lender informed at all times of Grantor's current address. Subject to applicable law, and except for notice required or allowed by law to be given in another manner, if there is more than one Grantor, any notice given by Lender to any Grantor is deemed to be notice given to all Grantors.

PACIFIC COAST BANKERS' BANK. This Deed of Trust and the grants, assignments and transfers made herein are also given for the purpose of securing the payment of all indebtedness, liabilities and obligations of Trustor to Pacific Coast

Bankers' Bank ("PCBB") under that certain Rate Protection Agreement dated on or about September 28, 2016 by and between the trustor / grantor hereunder (the "Trustor") and PCBB and any and all amendments, modifications, extensions, renewals or restatements thereof (the "Prepayment Agreement"). PCBB is a joint beneficiary and secured party for all purposes under this Deed of Trust. PCBB, the other beneficiary under this Deed of Trust ("Lender"), and the Trustor agree and acknowledge that the exercise of the secured parties' and beneficiaries' rights under this Deed of Trust will be done solely by Lender until such time that PCBB certifies in writing to Trustor and Lender that the conditions set forth in subsection (a) of the "Conditional Power of Attorney" provision in that certain Servicing and Intercreditor Agreement entered into by and between PCBB and Lender (the "Servicing Agreement") have been satisfied, in which case only PCBB may exercise the rights of the secured parties and beneficiaries under this Deed of Trust for the benefit of the secured parties and beneficiaries. On and after the date that PCBB has certified in writing to Trustor and Lender that the Prepayment Agreement has been terminated and that all of the obligations owed to PCBB under the Prepayment Agreement have been satisfied, PCBB will cease to be a secured party and beneficiary under this Deed of Trust and Lender will be the sole secured party and beneficiary under this Deed of Trust and will be solely entitled to exercise the rights of the secured party and beneficiary. On and after the date that Lender has certified in writing to Trustor and PCBB that all of the obligations owed to Lender that are secured by this Deed of Trust have been satisfied, Lender will cease to be a secured party and beneficiary under this Deed of Trust and PCBB will be the sole secured party and beneficiary under this Deed of Trust and may solely exercise the rights of the secured party and beneficiary.

MISCELLANEOUS PROVISIONS. The following miscellaneous provisions are a part of this Deed of Trust:

Amendments. This Deed of Trust, together with any Related Documents, constitutes the entire understanding and agreement of the parties as to the matters set forth in this Deed of Trust. No alteration of or amendment to this Deed of Trust shall be effective unless given in writing and signed by the party or parties sought to be charged or bound by the alteration or amendment.

Annual Reports. If the Property is used for purposes other than Grantor's residence, Grantor shall furnish to Lender, upon request, a certified statement of net operating income received from the Property during Grantor's previous fiscal year in such form and detail as Lender shall require. "Net operating income" shall mean all cash receipts from the Property less all cash expenditures made in connection with the operation of the Property.

Caption Headings. Caption headings in this Deed of Trust are for convenience purposes only and are not to be used to interpret or define the provisions of this Deed of Trust.

Merger. There shall be no merger of the interest or estate created by this Deed of Trust with any other interest or estate in the Property at any time held by or for the benefit of Lender in any capacity, without the written consent of Lender.

Governing Law. This Deed of Trust will be governed by federal law applicable to Lender and, to the extent not preempted by federal law, the laws of the State of Washington without regard to its conflicts of law provisions. This Deed of Trust has been accepted by Lender in the State of Washington.

Joint and Several Liability. All obligations of Borrower and Grantor under this Deed of Trust shall be joint and several, and all references to Grantor shall mean each and every Grantor, and all references to Borrower shall mean each and every Borrower. This means that each Grantor signing below is responsible for all obligations in this Deed of Trust.

No Waiver by Lender. Lender shall not be deemed to have waived any rights under this Deed of Trust unless such waiver is given in writing and signed by Lender. No delay or omission on the part of Lender in exercising any right shall operate as a waiver of such right or any other right. A waiver by Lender of a provision of this Deed of Trust shall not prejudice or constitute a waiver of Lender's right otherwise to demand strict compliance with that provision or any other provision of this Deed of Trust. No prior waiver by Lender, nor any course of dealing between Lender and Grantor, shall constitute a waiver of any of Lender's rights or of any of Grantor's obligations as to any future transactions. Whenever the consent of Lender is required under this Deed of Trust, the granting of such consent by Lender in any instance shall not constitute continuing consent to subsequent instances where such consent is required and in all cases such consent may be granted or withheld in the sole discretion of Lender.

Severability. If a court of competent jurisdiction finds any provision of this Deed of Trust to be illegal, invalid, or unenforceable as to any circumstance, that finding shall not make the offending provision illegal, invalid, or unenforceable as to any other circumstance. If feasible, the offending provision shall be considered modified so that it becomes legal, valid and enforceable. If the offending provision cannot be so modified, it shall be considered deleted from this Deed of Trust. Unless otherwise required by law, the illegality, invalidity, or unenforceability of any provision of this Deed of Trust shall not affect the legality, validity or enforceability of any other provision of this Deed of Trust.

Successors and Assigns. Subject to any limitations stated in this Deed of Trust on transfer of Grantor's interest, this Deed of Trust shall be binding upon and inure to the benefit of the parties, their successors and assigns. If ownership of the Property becomes vested in a person other than Grantor, Lender, without notice to Grantor, may deal with Grantor's successors with reference to this Deed of Trust and the Indebtedness by way of forbearance or extension without releasing Grantor from the obligations of this Deed of Trust or liability under the Indebtedness.

Time is of the Essence. Time is of the essence in the performance of this Deed of Trust.

Waiver of Homestead Exemption. Grantor hereby releases and waives all rights and benefits of the homestead exemption laws of the State of Washington as to all Indebtedness secured by this Deed of Trust.

DEFINITIONS. The following capitalized words and terms shall have the following meanings when used in this Deed of Trust. Unless specifically stated to the contrary, all references to dollar amounts shall mean amounts in lawful money of the United States of America. Words and terms used in the singular shall include the plural, and the plural shall include the singular, as the context may require. Words and terms not otherwise defined in this Deed of Trust shall have the meanings attributed to

such terms in the Uniform Commercial Code:

Beneficiary. The word "Beneficiary" means Coastal Community Bank, and its successors and assigns.

Borrower. The word "Borrower" means Lakewood Center North, LLC and includes all co-signers and co-makers signing the Note and all their successors and assigns.

Deed of Trust. The words "Deed of Trust" mean this Deed of Trust among Grantor, Lender, and Trustee, and includes without limitation all assignment and security interest provisions relating to the Personal Property and Rents.

Default. The word "Default" means the Default set forth in this Deed of Trust in the section titled "Default".

Event of Default. The words "Event of Default" mean any of the events of default set forth in this Deed of Trust in the events of default section of this Deed of Trust.

Grantor. The word "Grantor" means Myron F. Gemmer.

Guarantor. The word "Guarantor" means any guarantor, surety, or accommodation party of any or all of the Indebtedness.

Guaranty. The word "Guaranty" means the guaranty from Guarantor to Lender, including without limitation a guaranty of all or part of the Note.

Improvements. The word "Improvements" means all existing and future improvements, buildings, structures, mobile homes affixed on the Real Property, facilities, additions, replacements and other construction on the Real Property.

Indebtedness. The word "Indebtedness" means all principal, interest, and other amounts, costs and expenses payable under the Note or Related Documents, together with all renewals of, extensions of, modifications of, consolidations of and substitutions for the Note or Related Documents and any amounts expended or advanced by Lender to discharge Grantor's obligations or expenses incurred by Trustee or Lender to enforce Grantor's obligations under this Deed of Trust, together with interest on such amounts as provided in this Deed of Trust. Specifically, without limitation, Indebtedness includes the future advances set forth in the Future Advances provision, together with all interest thereon and all amounts that may be indirectly secured by the Cross-Collateralization provision of this Deed of Trust.

Lender. The word "Lender" means Coastal Community Bank, its successors and assigns.

Note. The word "Note" means the promissory note dated September 28, 2016, **in the original principal amount of $4,143,115.44** from Borrower to Lender, together with all renewals of, extensions of, modifications of, refinancings of, consolidations of, and substitutions for the promissory note or agreement. **NOTICE TO GRANTOR: THE NOTE CONTAINS A VARIABLE INTEREST RATE.**

Personal Property. The words "Personal Property" mean all equipment, fixtures, and other articles of personal property now or hereafter owned by Grantor, and now or hereafter attached or affixed to the Real Property; together with all accessions, parts, and additions to, all replacements of, and all substitutions for, any of such property; and together with all issues and profits thereon and proceeds (including without limitation all insurance proceeds and refunds of premiums) from any sale or other disposition of the Property.

Property. The word "Property" means collectively the Real Property and the Personal Property.

Real Property. The words "Real Property" mean the real property, interests and rights, as further described in this Deed of Trust.

Related Documents. The words "Related Documents" mean all promissory notes, credit agreements, loan agreements, security agreements, mortgages, deeds of trust, security deeds, collateral mortgages, and all other instruments, agreements and documents, whether now or hereafter existing, executed in connection with the Indebtedness; provided, that guaranties and environmental indemnity agreements are not "Related Documents" and are not secured by this Deed of Trust.

Rents. The word "Rents" means all present and future rents, revenues, income, issues, royalties, profits, and other benefits derived from the Property.

Trustee. The word "Trustee" means UPF Incorporated, a Washington Corporation, whose mailing address is 910 W. Boone Avenue, Spokane, WA 99201 and any substitute or successor trustees.

GRANTOR ACKNOWLEDGES HAVING READ ALL THE PROVISIONS OF THIS DEED OF TRUST, AND GRANTOR AGREES TO ITS TERMS.

Assessor's Tax Parcel ID#: 310519-004-011-00 and 310519-004-010-00

THIS ASSIGNMENT OF RENTS is dated September 28, 2016, among Myron F. Gemmer, whose address is 1507 172nd ST NE, Marysville, WA 98271; as a separate estate ("Grantor"); for the benefit of Coastal Community Bank, a Washington banking corporation, whose mailing address is Evergreen Branch, 5415 Evergreen Way, PO Box 12220, Everett, WA 98206 (referred to below sometimes as "Lender" and sometimes as "Beneficiary"); and Pacific Coast Bankers' Bank d/b/a Borrower's loan protection, a California banking corporation ("PCBB"); collectively, Bank and PCBB are referred to herein as "Beneficiary"), and UPF Incorporated, a Washington Corporation, whose mailing address is 910 W. Boone Avenue, Spokane, WA 99201 (referred to below as "Trustee").

ASSIGNMENT. For valuable consideration, Grantor hereby assigns, grants a continuing security interest in, and conveys to Lender all of Grantor's right, title, and interest in and to the Rents from the following described Property located in Snohomish County, State of Washington:

PARCEL 1:
All that portion of the Southeast quarter of the Southeast quarter of Section 19, Township 31 North, Range 5 East, W.M., in Snohomish County, Washington, lying West of the Great Northern Railway; EXCEPT portion contained in NILSEN'S ADDITION TO LAKEWOOD, according to the plat thereof recorded in Volume 6 of Plats, page 51, records of Snohomish County, Washington (not vacated); EXCEPT county road along the South line thereof; TOGETHER WITH vacated Lots 1, 2, 3, 4, 5 and 6, Block 1, NILSEN'S ADDITION TO LAKEWOOD, according to the plat thereof recorded in Volume 6 of Plats, page 51, records of Snohomish County, Washington (not vacated); AND TOGETHER WITH North half of vacated alley adjacent to Lots 1, 2 and 3 of said Block 1 and all of vacated alley adjacent to Lots 4 and 6 of said Block; AND TOGETHER WITH all vacated Cascade Street, all of vacated Summit Avenue and all of vacated Buell Avenue, lying North of the center line extended Easterly of vacated alley of said Block 1; EXCEPT county road along the South line thereof; AND EXCEPT that portion conveyed to Snohomish County under Recording No. 8908160400; TOGETHER WITH the Southwest quarter of the Southeast quarter of Section 19, Township 31 North, Range 5 East, W.M., lying East of the following described line; Commencing at the South quarter corner of said Section 19; THENCE along the South line of the Southwest quarter North 88°47'30" East a distance of 644.78 feet to the point of beginning; THENCE North 01°13'08" West, a distance of 687.54 feet; THENCE North 89°15'35" East, a distance of 30.44 feet; THENCE North 01°13'08" West, a distance of 658.43 feet to the North line of said Southwest quarter and the point of ending; EXCEPT beginning at a point on the South line of said Section 662.05 feet North, 88°47'30" East of the South quarter corner; THENCE North 02°03'21" West 195.03 feet; THENCE South 88°47'30" West 302.85 feet to a 90 foot radius curve concave to the Southeast; THENCE Southerly along said curve through a central angle of 45° a distance of 70.69 feet; THENCE South 01°12'30" East 131.36 feet; THENCE North 88°47'30" East 322.10 feet to the point of beginning; AND EXCEPT that portion thereof lying within 172nd Street N.E. (aka Lake Goodwin Road); ALSO EXCEPT a portion of the East half of the Southwest quarter of the Southeast quarter of Section 19, Township 31 North, Range 5 East, W.M., described as follows: Commencing at the Southeast corner of the East half of the Southwest quarter of the Southeast quarter of Section 19; THENCE North 89°56'15" West along the South line of said Section, for 53.00 feet to the point of beginning; THENCE North 00°34'36" East for 178.00 feet; THENCE North 89°29'45" West for 39.49 feet; THENCE North 00°32'07" East for 266.71 feet; THENCE North 89°56'15" West for 252.50 feet; THENCE South 00°05'27" East for 445.00 feet to the South line of said Section 19; THENCE South 89°56'15" East, along said South line, for 287.00 feet to the point of beginning; EXCEPT that portion thereof lying within 172nd Street N.E. (aka Lake Goodwin Road); EXCEPT that portion conveyed to City of Marysville, a municipal corporation recorded May 19, 2008 under Recording No. 200805190267; (ALSO KNOWN AS Parcel B of BLA 06-004 recorded January 12, 2007 under Recording No. 200701125006, in Snohomish County, Washington).

PARCEL 2:
A portion of the East half of the Southwest quarter of the Southeast quarter of Section 19, Township 31 North, Range 5 East, W.M., described as follows: Commencing at the Southeast corner of the East half of the Southwest quarter of the Southeast quarter of said Section 19; THENCE North 89°56'15" West, along the South line of said Section, for 53.00 feet to the point of beginning; THENCE North 00°34'36" East for 178.00 feet; THENCE North 89°29'45" West for 39.49 feet; THENCE North 00°32'07" East for 266.71 feet; THENCE North 89°56'15" West for 252.50 feet; THENCE South 00°05'27" East for 445.00 feet to the South line of said Section 19; THENCE South 89°56'15" East, along said South line, for 287.00 feet to the point of beginning; EXCEPT that portion thereof lying 172nd Street N.E. (aka Lake Goodwin Road); EXCEPT that portion conveyed to City of Marysville, a municipal corporation recorded May19, 2008 under Recording No. 200805190267; (ALSO KNOWN AS Parcel A of BLA 06-004 recorded January 12, 2007 under Recording No. 200701125006, in Snohomish County, Washington).

BOTH SITUATE in the County of Snohomish, State of Washington.

The Property or its address is commonly known as 1333 and 1507 172nd Street NE, AND, 1411 172nd Street NE, Marysville, WA 98271. The Property tax identification number is 310519-004-011-00 and 310519-004-010-00.

CROSS-COLLATERALIZATION. In addition to the Note, this Assignment secures all obligations, debts and liabilities, plus interest thereon, of either Grantor or Borrower to Lender, or any one or more of them, as well as all claims by Lender against Borrower and Grantor or any one or more of them, whether now existing or hereafter arising, whether related or unrelated to the purpose of the Note, whether voluntary or otherwise, whether due or not due, direct or indirect, determined or undetermined, absolute or contingent, liquidated or unliquidated, whether Borrower or Grantor may be liable individually or jointly with others, whether obligated as guarantor, surety, accommodation party or otherwise, and whether recovery upon such amounts may be or hereafter may become barred by any statute of limitations, and whether the obligation to repay such amounts may be or hereafter may become otherwise unenforceable.

FUTURE ADVANCES. In addition to the Note, this Assignment secures all future advances made by Lender to Borrower or Grantor whether or not the advances are made pursuant to a commitment. Specifically, without limitation, this Assignment secures, in addition to the amounts specified in the Note, all future amounts Lender in its discretion may loan to Borrower or Grantor, together with all interest thereon.

THIS ASSIGNMENT IS GIVEN TO SECURE (1) PAYMENT OF THE INDEBTEDNESS AND (2) PERFORMANCE OF ANY AND ALL OBLIGATIONS OF BORROWER AND GRANTOR UNDER THE NOTE, THIS ASSIGNMENT, AND THE RELATED DOCUMENTS. THIS ASSIGNMENT IS GIVEN AND ACCEPTED ON THE FOLLOWING TERMS:

GRANTOR'S WAIVERS. Grantor waives all rights or defenses arising by reason of any "one action" or "anti-deficiency" law, or any other law which may prevent Lender from bringing any action against Grantor, including a claim for deficiency to the extent Lender is otherwise entitled to a claim for deficiency, before or after Lender's commencement or completion of any foreclosure action, either judicially or by exercise of a power of sale.

BORROWER'S WAIVERS AND RESPONSIBILITIES. Lender need not tell Borrower about any action or inaction Lender takes in connection with this Assignment. Borrower assumes the responsibility for being and keeping informed about the Property. Borrower waives any defenses that may arise because of any action or inaction of Lender, including without limitation any failure of Lender to realize upon the Property, or any delay by Lender in realizing upon the Property. Borrower agrees to remain liable under the Note with Lender no matter what action Lender takes or fails to take under this Assignment.

PAYMENT AND PERFORMANCE. Except as otherwise provided in this Assignment or any Related Documents, Grantor shall pay to Lender all amounts secured by this Assignment as they become due, and shall strictly perform all of Grantor's obligations under this Assignment. Unless and until Lender exercises its right to collect the Rents as provided below and so long as there is no default under this Assignment, Grantor may remain in possession and control of and operate and manage the Property and collect the Rents, provided that the granting of the right to collect the Rents shall not constitute Lender's consent to the use of cash collateral in a bankruptcy proceeding.

GRANTOR'S REPRESENTATIONS AND WARRANTIES. Grantor warrants that:

Ownership. Grantor is entitled to receive the Rents free and clear of all rights, loans, liens, encumbrances, and claims except as disclosed to and accepted by Lender in writing.

Right to Assign. Grantor has the full right, power and authority to enter into this Assignment and to assign and convey the Rents to Lender.

No Prior Assignment. Grantor has not previously assigned or conveyed the Rents to any other person by any instrument now in force.

No Further Transfer. Grantor will not sell, assign, encumber, or otherwise dispose of any of Grantor's rights in the Rents except as provided in this Assignment.

LENDER'S RIGHT TO RECEIVE AND COLLECT RENTS. Lender shall have the right at any time, and even though no default shall have occurred under this Assignment, to collect and receive the Rents. For this purpose, Lender is hereby given and granted the following rights, powers and authority:

Notice to Tenants. Lender may send notices to any and all tenants of the Property advising them of this Assignment and directing all Rents to be paid directly to Lender or Lender's agent.

Enter the Property. Lender may enter upon and take possession of the Property; demand, collect and receive from the tenants or from any other persons liable therefor, all of the Rents; institute and carry on all legal proceedings necessary for the protection of the Property, including such proceedings as may be necessary to recover possession of the Property; collect the Rents and remove any tenant or tenants or other persons from the Property.

Maintain the Property. Lender may enter upon the Property to maintain the Property and keep the same in repair; to pay the costs thereof and of all services of all employees, including their equipment, and of all continuing costs and expenses of maintaining the Property in proper repair and condition, and also to pay all taxes, assessments and water utilities, and the premiums on fire and other insurance effected by Lender on the Property.

Compliance with Laws. Lender may do any and all things to execute and comply with the laws of the State of Washington and also all other laws, rules, orders, ordinances and requirements of all other governmental agencies affecting the Property.

Lease the Property. Lender may rent or lease the whole or any part of the Property for such term or terms and on such conditions as Lender may deem appropriate.

Employ Agents. Lender may engage such agent or agents as Lender may deem appropriate, either in Lender's name or in Grantor's name, to rent and manage the Property, including the collection and application of Rents.

Other Acts. Lender may do all such other things and acts with respect to the Property as Lender may deem appropriate and may act exclusively and solely in the place and stead of Grantor and to have all of the powers of Grantor for the purposes stated above.

No Requirement to Act. Lender shall not be required to do any of the foregoing acts or things, and the fact that Lender shall have performed one or more of the foregoing acts or things shall not require Lender to do any other specific act or thing.

APPLICATION OF RENTS. All costs and expenses incurred by Lender in connection with the Property shall be for Grantor's account and Lender may pay such costs and expenses from the Rents. Lender, in its sole discretion, shall determine the application of any and all Rents received by it; however, any such Rents received by Lender which are not applied to such costs and expenses shall be applied to the Indebtedness. All expenditures made by Lender under this Assignment and not reimbursed from the Rents shall become a part of the Indebtedness secured by this Assignment, and shall be payable on demand, with interest at the Note rate from date of expenditure until paid.

FULL PERFORMANCE. If Grantor pays all of the Indebtedness when due and otherwise performs all the obligations imposed upon Grantor under this Assignment, the Note, and the Related Documents, Lender shall execute and deliver to Grantor a suitable satisfaction of this Assignment and suitable statements of termination of any financing statement on file evidencing Lender's security interest in the Rents and the Property. Any termination fee required by law shall be paid by Grantor, if permitted by applicable law.

LENDER'S EXPENDITURES. If any action or proceeding is commenced that would materially affect Lender's interest in the Property or if Grantor fails to comply with any provision of this Assignment or any Related Documents, including but not limited to Grantor's failure to discharge or pay when due any amounts Grantor is required to discharge or pay under this Assignment or any Related Documents, Lender on Grantor's behalf may (but shall not be obligated to) take any action that Lender deems appropriate, including but not limited to discharging or paying all taxes, liens, security interests, encumbrances and other claims, at any time levied or placed on the Rents or the Property and paying all costs for insuring, maintaining and preserving the Property. All such expenditures incurred or paid by Lender for such purposes will then bear interest at the rate charged under the Note from the date incurred or paid by Lender to the date of repayment by Grantor. All such expenses will become a part of the Indebtedness and, at Lender's option, will (A) be payable on demand; (B) be added to the balance of the Note and be apportioned among and be payable with any installment payments to become due during either (1) the term of any applicable insurance policy; or (2) the remaining term of the Note; or (C) be treated as a balloon payment which will be due and payable at the Note's maturity. The Assignment also will secure payment of these amounts. Such right shall be in addition to all other rights and remedies to which Lender may be entitled upon Default.

DEFAULT. Each of the following, at Lender's option, shall constitute an Event of Default under this Assignment:

Payment Default. Borrower fails to make any payment when due under the Indebtedness.

Other Defaults. Borrower or Grantor fails to comply with or to perform any other term, obligation, covenant or condition contained in this Assignment or in any of the Related Documents or to comply with or to perform any term, obligation, covenant or condition contained in any other agreement between Lender and Borrower or Grantor.

Default on Other Payments. Failure of Grantor within the time required by this Assignment to make any payment for taxes or insurance, or any other payment necessary to prevent filing of or to effect discharge of any lien.

Default in Favor of Third Parties. Borrower, any guarantor or Grantor defaults under any loan, extension of credit, security agreement, purchase or sales agreement, or any other agreement, in favor of any other creditor or person that may materially affect any of Borrower's, any guarantor's or Grantor's property or ability to perform their respective obligations under this Assignment or any of the Related Documents.

Environmental Default. Failure of any party to comply with or perform when due any term, obligation, covenant or condition contained in any environmental agreement executed in connection with the Property.

False Statements. Any warranty, representation or statement made or furnished to Lender by Borrower or Grantor or on Borrower's or Grantor's behalf under this Assignment or the Related Documents is false or misleading in any material respect, either now or at the time made or furnished or becomes false or misleading at any time thereafter.

Defective Collateralization. This Assignment or any of the Related Documents ceases to be in full force and effect (including failure of any collateral document to create a valid and perfected security interest or lien) at any time and for any reason.

Death or Insolvency. The dissolution of Grantor's (regardless of whether election to continue is made), any member withdraws from the limited liability company, or any other termination of Borrower's or Grantor's existence as a going business or the death of any member, the insolvency of Borrower or Grantor, the appointment of a receiver for any part of Borrower's or Grantor's property, any assignment for the benefit of creditors, any type of creditor workout, or the commencement of any proceeding under any bankruptcy or insolvency laws by or against Borrower or Grantor.

Creditor or Forfeiture Proceedings. Commencement of foreclosure or forfeiture proceedings, whether by judicial proceeding, self-help, repossession or any other method, by any creditor of Borrower or Grantor or by any governmental agency against the Rents or any property securing the Indebtedness. This includes a garnishment of any of Borrower's or Grantor's accounts, including deposit accounts, with Lender. However, this Event of Default shall not apply if there is a good faith dispute by Borrower or Grantor as to the validity or reasonableness of the claim which is the basis of the creditor or forfeiture proceeding and if Borrower or Grantor gives Lender written notice of the creditor or forfeiture proceeding and deposits with Lender monies or a surety bond for the creditor or forfeiture proceeding, in an amount

determined by Lender, in its sole discretion, as being an adequate reserve or bond for the dispute.

Property Damage or Loss. The Property is lost, stolen, substantially damaged, sold, or borrowed against.

Events Affecting Guarantor. Any of the preceding events occurs with respect to any Guarantor of any of the Indebtedness or any Guarantor dies or becomes incompetent, or revokes or disputes the validity of, or liability under, any Guaranty of the Indebtedness.

Adverse Change. A material adverse change occurs in Grantor's financial condition, or Lender believes the prospect of payment or performance of the Indebtedness is impaired.

Insecurity. Lender in good faith believes itself insecure.

Cure Provisions. If any default, other than a default in payment, is curable and if Grantor has not been given a notice of a breach of the same provision of this Assignment within the preceding twelve (12) months, it may be cured if Grantor, after Lender sends written notice to Borrower demanding cure of such default: (1) cures the default within ten (10) days; or (2) if the cure requires more than ten (10) days, immediately initiates steps which Lender deems in Lender's sole discretion to be sufficient to cure the default and thereafter continues and completes all reasonable and necessary steps sufficient to produce compliance as soon as reasonably practical.

RIGHTS AND REMEDIES ON DEFAULT. Upon the occurrence of any Event of Default and at any time thereafter, Lender may exercise any one or more of the following rights and remedies, in addition to any other rights or remedies provided by law:

Accelerate Indebtedness. Lender shall have the right at its option without notice to Borrower or Grantor to declare the entire Indebtedness immediately due and payable, including any prepayment penalty that Borrower would be required to pay.

Collect Rents. Lender shall have the right, without notice to Borrower or Grantor, to take possession of the Property and collect the Rents, including amounts past due and unpaid, and apply the net proceeds, over and above Lender's costs, against the Indebtedness. In furtherance of this right, Lender shall have all the rights provided for in the Lender's Right to Receive and Collect Rents Section, above. If the Rents are collected by Lender, then Grantor irrevocably designates Lender as Grantor's attorney-in-fact to endorse instruments received in payment thereof in the name of Grantor and to negotiate the same and collect the proceeds. Payments by tenants or other users to Lender in response to Lender's demand shall satisfy the obligations for which the payments are made, whether or not any proper grounds for the demand existed. Lender may exercise its rights under this subparagraph either in person, by agent, or through a receiver.

Appoint Receiver. Lender shall have the right to have a receiver appointed to take possession of all or any part of the Property, with the power to protect and preserve the Property, to operate the Property preceding or pending foreclosure or sale, and to collect the Rents from the Property and apply the proceeds, over and above the cost of the receivership, against the Indebtedness. The receiver may serve without bond if permitted by law. Lender's right to the appointment of a receiver shall exist whether or not the apparent value of the Property exceeds the Indebtedness by a substantial amount. Employment by Lender shall not disqualify a person from serving as a receiver.

Other Remedies. Lender shall have all other rights and remedies provided in this Assignment or the Note or by law.

Election of Remedies. Election by Lender to pursue any remedy shall not exclude pursuit of any other remedy, and an election to make expenditures or to take action to perform an obligation of Grantor under this Assignment, after Grantor's failure to perform, shall not affect Lender's right to declare a default and exercise its remedies.

Attorneys' Fees; Expenses. If Lender institutes any suit or action to enforce any of the terms of this Assignment, Lender shall be entitled to recover such sum as the court may adjudge reasonable as attorneys' fees at trial and upon any appeal. Whether or not any court action is involved, and to the extent not prohibited by law, all reasonable expenses Lender incurs that in Lender's opinion are necessary at any time for the protection of its interest or the enforcement of its rights shall become a part of the Indebtedness payable on demand and shall bear interest at the Note rate from the date of the expenditure until repaid. Expenses covered by this paragraph include, without limitation, however subject to any limits under applicable law, Lender's attorneys' fees and Lender's legal expenses, whether or not there is a lawsuit, including attorneys' fees and expenses for bankruptcy proceedings (including efforts to modify or vacate any automatic stay or injunction), appeals, and any anticipated post-judgment collection services, the cost of searching records, obtaining title reports (including foreclosure reports), surveyors' reports, and appraisal fees, title insurance, and fees for the Trustee, to the extent permitted by applicable law. Grantor also will pay any court costs, in addition to all other sums provided by law.

PACIFIC COAST BANKERS' BANK. This Deed of Trust and the grants, assignments and transfers made herein are also given for the purpose of securing the payment of all indebtedness, liabilities and obligations of Trustor to Pacific Coast Bankers' Bank ("PCBB") under that certain Rate Protection Agreement dated on or about September 28, 2016 by and between the trustor / grantor hereunder (the "Trustor") and PCBB and any and all amendments, modifications, extensions, renewals or restatements thereof (the "Prepayment Agreement"). PCBB is a joint beneficiary and secured party for all purposes under this Deed of Trust. PCBB, the other beneficiary under this Deed of Trust ("Lender"), and the Trustor agree and acknowledge that the exercise of the secured parties' and beneficiaries' rights under this Deed of Trust will be done solely by Lender until such time that PCBB certifies in writing to Trustor and Lender that the conditions set forth in subsection (a) of the "Conditional Power of Attorney" provision in that certain Servicing and Intercreditor Agreement entered into by and between PCBB and Lender (the "Servicing Agreement") have been satisfied, in which case only PCBB may exercise the rights of the secured parties and beneficiaries under this Deed of Trust for the benefit of the secured parties and beneficiaries. On and after the date that PCBB has certified in writing to Trustor and Lender that the Prepayment Agreement has been terminated and that all of the obligations owed to PCBB under the Prepayment Agreement have been satisfied, PCBB will

cease to be a secured party and beneficiary under this Deed of Trust and Lender will be the sole secured party and beneficiary under this Deed of Trust and will be solely entitled to exercise the rights of the secured party and beneficiary. On and after the date that Lender has certified in writing to Trustor and PCBB that all of the obligations owed to Lender that are secured by this Deed of Trust have been satisfied, Lender will cease to be a secured party and beneficiary under this Deed of Trust and PCBB will be the sole secured party and beneficiary under this Deed of Trust and may solely exercise the rights of the secured party and beneficiary.

MISCELLANEOUS PROVISIONS. The following miscellaneous provisions are a part of this Assignment:

Amendments. This Assignment, together with any Related Documents, constitutes the entire understanding and agreement of the parties as to the matters set forth in this Assignment. No alteration of or amendment to this Assignment shall be effective unless given in writing and signed by the party or parties sought to be charged or bound by the alteration or amendment.

Caption Headings. Caption headings in this Assignment are for convenience purposes only and are not to be used to interpret or define the provisions of this Assignment.

Governing Law. This Assignment will be governed by federal law applicable to Lender and, to the extent not preempted by federal law, the laws of the State of Washington without regard to its conflicts of law provisions. This Assignment has been accepted by Lender in the State of Washington.

Joint and Several Liability. All obligations of Borrower and Grantor under this Assignment shall be joint and several, and all references to Grantor shall mean each and every Grantor, and all references to Borrower shall mean each and every Borrower. This means that each Grantor signing below is responsible for all obligations in this Assignment.

Merger. There shall be no merger of the interest or estate created by this Assignment with any other interest or estate in the Property at any time held by or for the benefit of Lender in any capacity, without the written consent of Lender.

Interpretation. (1) In all cases where there is more than one Borrower or Grantor, then all words used in this Assignment in the singular shall be deemed to have been used in the plural where the context and construction so require. (2) If more than one person signs this Assignment as "Grantor," the obligations of each Grantor are joint and several. This means that if Lender brings a lawsuit, Lender may sue any one or more of the Grantors. If Borrower and Grantor are not the same person, Lender need not sue Borrower first, and that Borrower need not be joined in any lawsuit. (3) The names given to paragraphs or sections in this Assignment are for convenience purposes only. They are not to be used to interpret or define the provisions of this Assignment.

No Waiver by Lender. Lender shall not be deemed to have waived any rights under this Assignment unless such waiver is given in writing and signed by Lender. No delay or omission on the part of Lender in exercising any right shall operate as a waiver of such right or any other right. A waiver by Lender of a provision of this Assignment shall not prejudice or constitute a waiver of Lender's right otherwise to demand strict compliance with that provision or any other provision of this Assignment. No prior waiver by Lender, nor any course of dealing between Lender and Grantor, shall constitute a waiver of any of Lender's rights or of any of Grantor's obligations as to any future transactions. Whenever the consent of Lender is required under this Assignment, the granting of such consent by Lender in any instance shall not constitute continuing consent to subsequent instances where such consent is required and in all cases such consent may be granted or withheld in the sole discretion of Lender.

Notices. Subject to applicable law, and except for notice required or allowed by law to be given in another manner, any notice required to be given under this Assignment shall be given in writing, and shall be effective when actually delivered, when actually received by telefacsimile (unless otherwise required by law), when deposited with a nationally recognized overnight courier, or, if mailed, when deposited in the United States mail, as first class, certified or registered mail postage prepaid, directed to the addresses shown near the beginning of this Assignment. Any party may change its address for notices under this Assignment by giving formal written notice to the other parties, specifying that the purpose of the notice is to change the party's address. For notice purposes, Grantor agrees to keep Lender informed at all times of Grantor's current address. Subject to applicable law, and except for notice required or allowed by law to be given in another manner, if there is more than one Grantor, any notice given by Lender to any Grantor is deemed to be notice given to all Grantors.

Powers of Attorney. The various agencies and powers of attorney conveyed on Lender under this Assignment are granted for purposes of security and may not be revoked by Grantor until such time as the same are renounced by Lender.

Severability. If a court of competent jurisdiction finds any provision of this Assignment to be illegal, invalid, or unenforceable as to any circumstance, that finding shall not make the offending provision illegal, invalid, or unenforceable as to any other circumstance. If feasible, the offending provision shall be considered modified so that it becomes legal, valid and enforceable. If the offending provision cannot be so modified, it shall be considered deleted from this Assignment. Unless otherwise required by law, the illegality, invalidity, or unenforceability of any provision of this Assignment shall not affect the legality, validity or enforceability of any other provision of this Assignment.

Successors and Assigns. Subject to any limitations stated in this Assignment on transfer of Grantor's interest, this Assignment shall be binding upon and inure to the benefit of the parties, their successors and assigns. If ownership of the Property becomes vested in a person other than Grantor, Lender, without notice to Grantor, may deal with Grantor's successors with reference to this Assignment and the Indebtedness by way of forbearance or extension without releasing Grantor from the obligations of this Assignment or liability under the Indebtedness.

Time is of the Essence. Time is of the essence in the performance of this Assignment.

Waiver of Homestead Exemption. Grantor hereby releases and waives all rights and benefits of the homestead

exemption laws of the State of Washington as to all Indebtedness secured by this Assignment.

DEFINITIONS. The following capitalized words and terms shall have the following meanings when used in this Assignment. Unless specifically stated to the contrary, all references to dollar amounts shall mean amounts in lawful money of the United States of America. Words and terms used in the singular shall include the plural, and the plural shall include the singular, as the context may require. Words and terms not otherwise defined in this Assignment shall have the meanings attributed to such terms in the Uniform Commercial Code:

Assignment. The word "Assignment" means this ASSIGNMENT OF RENTS, as this ASSIGNMENT OF RENTS may be amended or modified from time to time, together with all exhibits and schedules attached to this ASSIGNMENT OF RENTS from time to time.

Borrower. The word "Borrower" means Lakewood Center North, LLC.

Default. The word "Default" means the Default set forth in this Assignment in the section titled "Default".

Event of Default. The words "Event of Default" mean any of the events of default set forth in this Assignment in the default section of this Assignment.

Grantor. The word "Grantor" means Myron F. Gemmer.

Guarantor. The word "Guarantor" means any guarantor, surety, or accommodation party of any or all of the Indebtedness.

Guaranty. The word "Guaranty" means the guaranty from Guarantor to Lender, including without limitation a guaranty of all or part of the Note.

Indebtedness. The word "Indebtedness" means all principal, interest, and other amounts, costs and expenses payable under the Note or Related Documents, together with all renewals of, extensions of, modifications of, consolidations of and substitutions for the Note or Related Documents and any amounts expended or advanced by Lender to discharge Grantor's obligations or expenses incurred by Lender to enforce Grantor's obligations under this Assignment, together with interest on such amounts as provided in this Assignment. Specifically, without limitation, Indebtedness includes the future advances set forth in the Future Advances provision, together with all interest thereon and all amounts that may be indirectly secured by the Cross-Collateralization provision of this Assignment.

Lender. The word "Lender" means Coastal Community Bank, its successors and assigns.

Note. The word "Note" means the promissory note dated September 28, 2016, **in the original principal amount of $4,143,115.44** from Borrower to Lender, together with all renewals of, extensions of, modifications of, refinancings of, consolidations of, and substitutions for the promissory note or agreement.

Property. The word "Property" means all of Grantor's right, title and interest in and to all the Property as described in the "Assignment" section of this Assignment.

Related Documents. The words "Related Documents" mean all promissory notes, credit agreements, loan agreements, environmental agreements, guaranties, security agreements, mortgages, deeds of trust, security deeds, collateral mortgages, and all other instruments, agreements and documents, whether now or hereafter existing, executed in connection with the Indebtedness.

Rents. The word "Rents" means all of Grantor's present and future rights, title and interest in, to and under any and all present and future leases, including, without limitation, all rents, revenue, income, issues, royalties, bonuses, accounts receivable, cash or security deposits, advance rentals, profits and proceeds from the Property, and other payments and benefits derived or to be derived from such leases of every kind and nature, whether due now or later, including without limitation Grantor's right to enforce such leases and to receive and collect payment and proceeds thereunder.

THE UNDERSIGNED ACKNOWLEDGES HAVING READ ALL THE PROVISIONS OF THIS ASSIGNMENT. THIS DOCUMENT IS EXECUTED ON SEPTEMBER 28, 2016.

THIS SUBORDINATION, NON-DISTURBANCE AND ATTORNMENT AGREEMENT dated September 23, 2016 ("Agreement"), is made and executed among Myron F. Gemmer, whose address is PO Box 247, North Lakewood, WA 98259 ("Landlord"); Dr. Michael Breneman (dba Cascadia Clinic LLC), whose address is 1507 172nd Street NE, Suites C-1 & C-2, Marysville, WA 98271 ("Tenant"); and Coastal Community Bank, Marysville Branch, 319 State Avenue, Suite 105, Marysville, WA 98270 ("Lender").

SUBORDINATION, NON-DISTURBANCE AND ATTORNMENT AGREEMENT (Continued)

SUBORDINATED LEASE. Tenant and Landlord have executed a lease dated January 1, 2013 of the property described herein which was recorded as follows: unrecorded (the "Lease"). The following information is the summary of the basic terms and conditions of the Subordinated Lease: The term of lease shall be for 3 years commencing on January 1, 2013 and terminating on December 31, 2016. Lessee shall have the right to extend the lease term in additional consecutive 3 year terms.

REAL PROPERTY DESCRIPTION. The Lease covers approximately 2500 sq. feet of commercial office space located at 1507 172nd ST NE, Marysville, WA 98271, it shall consist of 2 separate but adjoining suites that shall be identified as Suite C-1 and Suite C-2 of the following described real property (the "Real Property") located in Snohomish County, State of Washington:

All that portion of the Southeast quarter of the Southeast quarter of Section 19, Township 31 North, Range 5 East, W.M., in Snohomish County, Washington, lying West of the Great Northern Railway; EXCEPT portion contained in NILSEN'S ADDITION TO LAKEWOOD, according to the plat thereof recorded in Volume 6 of Plats, page 51, records of Snohomish County, Washington (not vacated); EXCEPT county road along the South line thereof; TOGETHER WITH vacated Lots 1, 2, 3, 4, 5 and 6, Block 1, NILSEN'S ADDITION TO LAKEWOOD, according to the plat thereof recorded in Volume 6 of Plats, page 51, records of Snohomish County, Washington (not vacated); AND TOGETHER WITH North half of vacated alley adjacent to Lots 1, 2 and 3 of said Block 1 and all of vacated alley adjacent to Lots 4 and 6 of said Block; AND TOGETHER WITH all vacated Cascade Street, all of vacated Summit Avenue and all of vacated Buell Avenue, lying North of the center line extended Easterly of vacated alley of said Block 1; EXCEPT county road along the South line thereof;

AND EXCEPT that portion conveyed to Snohomish County under Recording No. 8908160400; TOGETHER WITH the Southwest quarter of the Southeast quarter of Section 19, Township 31 North, Range 5 East, W.M., lying East of the following described line; Commencing at the South quarter corner of said Section 19; THENCE along the South line of the Southwest quarter North 88°47'30" East a distance of 644.78 feet to the point of beginning; THENCE North 01°13'08" West, a distance of 687.54 feet; THENCE North 89°15'35" East, a distance of 30.44 feet; THENCE North 01°13'08" West, a distance of 658.43 feet to the North line of said Southwest quarter and the point of ending; EXCEPT beginning at a point on the South line of said Section 662.05 feet North, 88°47'30" East of the South quarter corner; THENCE North 02°03'21" West 195.03 feet; THENCE South 88°47'30" West 302.85 feet to a 90 foot radius curve concave to the Southeast; THENCE Southerly along said curve through a central angle of 45° a distance of 70.69 feet; THENCE South 01°12'30" East 131.36 feet; THENCE North 88°47'30" East 322.10 feet to the point of beginning; AND EXCEPT that portion thereof lying within 172nd Street N.E. (aka Lake Goodwin Road); ALSO EXCEPT a portion of the East half of the Southwest quarter of the Southeast quarter of

Section 19, Township 31 North, Range 5 East, W.M., described as follows: Commencing at the Southeast corner of the East half of the Southwest quarter of the Southeast quarter of Section 19; THENCE North 89°56'15" West along the South line of said Section, for 53.00 feet to the point of beginning; THENCE North 00°34'36" East for 178.00 feet; THENCE North 89°29'45" West for 39.49 feet; THENCE North 00°32'07" East for 266.71 feet; THENCE North 89°56'15" West for 252.50 feet; THENCE South 00°05'27" East for 445.00 feet to the South line of said Section 19; THENCE South 89°56'15" East, along said South line, for 287.00 feet to the point of beginning; EXCEPT that portion thereof lying within 172nd Street N.E. (aka Lake Goodwin Road); EXCEPT that portion conveyed to City of Marysville, a municipal corporation recorded May 19, 2008 under Recording No. 200805190267; (ALSO KNOWN AS Parcel B of BLA 06-004 recorded January 12, 2007 under Recording No. 200701125006, in Snohomish County, Washington).

The Real Property or its address is commonly known as 1507 172nd Street NE, Marysville, WA 98271. The Real Property tax identification number is 310519-004-011-00.

SUPERIOR INDEBTEDNESS. Lender has extended or has agreed to extend the following described financial accommodations to Lakewood Center North, LLC, secured by the Real Property (the "Superior Indebtedness"):

Deed Of Trust dated _____, **recorded in Snohomish County, WA on** _____ **under auditor file number** _____.

LENDER'S LIEN. The Superior Indebtedness is or will be secured by the Real Property and evidenced by a mortgage, deed of trust, or other lien instrument, dated 09/26/2016, from Landlord to Lender (the "Lender's Lien") and recorded in Snohomish County, State of Washington as follows:

Deed Of Trust dated 9-28-2016, **recorded in Snohomish County, WA on** _____ **under auditor file number** 201609280660.

As a condition to the granting of the requested financial accommodations, Lender has required that the Lender's Lien be and remain superior to the Subordinated Lease and all of Tenant's rights in the Real Property ("Lease Rights").

REQUESTED FINANCIAL ACCOMMODATIONS. Landlord and Tenant each want Lender to provide financial accommodations to Lakewood Center North, LLC in the form of the Superior Indebtedness. Landlord and Tenant each represent and acknowledge to Lender that Landlord and Tenant will benefit as a result of these financial accommodations from Lender to Lakewood Center North, LLC, and Landlord and Tenant acknowledge receipt of valuable consideration for entering into this Agreement.

IN EXCHANGE FOR GOOD AND VALUABLE CONSIDERATION, THE SUFFICIENCY AND RECEIPT OF WHICH ARE HEREBY ACKNOWLEDGED, LENDER, LANDLORD, AND TENANT HEREBY AGREE AS FOLLOWS:

ESTOPPEL CERTIFICATE. Tenant hereby certifies to and agrees with Lender that as of the date of this Agreement, Lender is relying on all of the following certifications and agreements of Tenant as consideration for Lender executing this Agreement:

(A) The Lease is in full force and effect and is the valid and binding obligation of Tenant, enforceable in accordance with its terms.

(B) All requirements for the commencement and validity of the Lease have been satisfied.

(C) Neither Tenant nor Landlord is in default under the Lease and no event has occurred and no condition exists, which with the giving of notice, the passage of time, or both, would constitute a default by Tenant or Landlord under the Lease.

(D) There are no defenses, counterclaims or setoffs against rents or charges due or which may become due under the Lease and no claim by Tenant of any nature exists against Landlord under the Lease. All obligations of Landlord have been fully performed.

(E) None of the rent, which Tenant is required to pay under the Lease, has been prepaid, or will in the future be prepaid, more than one month in advance.

(F) The Lease shall not after the date of this Agreement be modified, terminated, or amended, without the prior written consent of Lender for any termination and each such amendment or modification. Any attempted modification, termination, or amendment without the prior written consent of Lender shall be void.

(G) Tenant has not assigned, mortgaged, sublet, encumbered or otherwise transferred any or all of its interest under the Lease and, during the term of the Loan, agrees to not assign, mortgage, sublet, encumber, or otherwise transfer any or all of its interest under the Lease without the prior written consent of Lender.

SUBORDINATION. Notwithstanding anything in the Lease to the contrary, the parties acknowledge and agree that the Lease and Lease Rights are and shall be subject and subordinate in right, interest and lien, and for all purposes, to Lender's Lien, and to all renewals, modifications, consolidations, replacements, and extensions thereof, and to any subsequent lien of the Lender with which Lender's Lien may be spread or consolidated, to the full extent of the principal sum and all other amounts secured thereby and interest thereon. Tenant will not cause the Lease to be subordinated to any interests other than those held by or made for the benefit of Lender, and its successors and assigns, without the prior written consent of Lender.

NON-DISTURBANCE. So long as the Lease is in full force and effect and Tenant is not in default under the Lease beyond any applicable cure period, Lender shall not name or join Tenant as a defendant in any exercise of Lender's rights and remedies arising upon a default of the Loan under the Note and/or under Lender's Lien unless applicable law requires Tenant to be made a party thereto as a condition to proceeding against Landlord or pursuing such rights and remedies. In the latter case, Lender may join Tenant as a defendant in such action only for such purpose and not to terminate the Lease or otherwise adversely affect Tenant's rights under the Lease or this Agreement in such action. If the Lease has not been terminated, then, when Lender succeeds to the interest of Landlord, the Lender shall not terminate or disturb Tenant's possession of Tenant's premises under the Lease, except in accordance with the terms of the Lease and this Agreement.

ATTORNMENT. If Lender shall succeed to the interest of the Landlord under the Lease, and the Lease shall not have expired or been terminated in accordance with the terms of the Lease or this Agreement, Tenant shall, from and after such event, attorn to Lender, all rights and obligations under the Lease to continue as though the interest of Landlord had not terminated. Such attornment shall be effective and self-operative without the execution of any further instrument on the part of the parties hereto. Tenant agrees, however, to execute and deliver at any time and from time to time, upon the request of Lender, any instrument or certificate which, in the sole judgment of Lender, may be necessary or appropriate in any such foreclosure proceeding or otherwise to evidence such attornment.

NO LIABILITY FOR LENDER. Lender in the event of attornment shall have the same remedies in the event of any default by Tenant (beyond any period given Tenant to cure such default) in the payment of annual base rent or additional rent or in the performance of any of the terms, covenants, and conditions of the Lease on Tenant's part to be performed that are available to Landlord under the Lease. Tenant shall have the same remedies against Lender for the breach of an agreement contained in the Lease that Tenant might have had against Landlord if Lender had not succeeded to the interest of Landlord; provided, however, that Lender shall not be:

(A) Liable for any act or omission of or any claims against any prior landlord, including Landlord; or

(B) Subject to any offsets or defenses which Tenant might have against any prior landlord, including Landlord; or

(C) Bound by any rent or additional rent which Tenant might have paid for more than the current month to any prior landlord, including Landlord; or

(D) Bound by any amendment or modification of the Lease, or waiver of any of its terms, made without its consent; or

(E) Liable for any sum that any prior landlord, including Landlord, owed to Tenant, including without limitation any security deposit, unless the amount owed was actually delivered to Lender; or

(F) Bound by any surrender, cancellation, or termination of the Lease, in whole or in part, agreed upon between Landlord and Tenant; or

(G) Liable for any construction obligation of any prior landlord, including Landlord; or

(H) Liable for any breach of representation or warranty of any prior landlord, including Landlord.

NEW LEASE. If Lender shall succeed to the interest of the Landlord under the Lease, upon the written request of Lender to Tenant, Tenant shall execute and deliver to Lender a lease of the Real Property upon the same terms and conditions as the Lease between Landlord and Tenant, which lease shall cover any unexpired term of the Lease existing prior to such transfer.

ACKNOWLEDGMENT AND AGREEMENT BY LANDLORD. Landlord, as landlord under the Lease, acknowledges and agrees for itself and its heirs, successors and assigns to each of the following:

(A) This Agreement does not in any way release Landlord from its obligations to comply with the terms, provisions, conditions, covenants, agreements and clauses of the Note, Lender's Lien or any other documents executed in connection with the Loan.

(B) In the event of a default under the Note, or any of the other documents executed in connection with the Loan, Landlord hereby consents to Tenant's attornment to Lender and, upon such event, Tenant shall pay all rent and all other sums due under the Lease to Lender as provided in the Lease.

MISCELLANEOUS PROVISIONS. The following miscellaneous provisions are a part of this Agreement:

Amendments. This Agreement constitutes the entire understanding and agreement of the parties as to the matters set forth in this Agreement. No alteration of or amendment to this Agreement shall be effective unless given in writing and signed by the party or parties sought to be charged or bound by the alteration or amendment.

Attorneys' Fees; Expenses. If Lender institutes any suit or action to enforce any of the terms of this Agreement, Lender shall be entitled to recover such sum as the court may adjudge reasonable as attorneys' fees at trial and upon any appeal. Whether or not any court action is involved, and to the extent not prohibited by law, all reasonable expenses Lender incurs that in Lender's opinion are necessary at any time for the protection of its interest or the enforcement of its rights shall become a part of the Indebtedness payable on demand and shall bear interest at the Note rate from the date of the expenditure until repaid. Expenses covered by this paragraph include, without limitation, however subject to any limits under applicable law, Lender's attorneys' fees and Lender's legal expenses, whether or not there is a lawsuit, including attorneys' fees and expenses for bankruptcy proceedings (including efforts to modify or vacate any automatic stay or injunction), appeals, and any anticipated post-judgment collection services, the cost of searching records, obtaining title reports (including foreclosure reports), surveyors' reports, and appraisal fees and title insurance, to the extent permitted by applicable law. Landlord also will pay any court costs, in addition to all other sums provided by law.

Authority. Any person who signs this Agreement on behalf of Landlord and Tenant represents and warrants that he or she has authority to execute this Agreement.

Caption Headings. Caption headings in this Agreement are for convenience purposes only and are not to be used to interpret or define the provisions of this Agreement.

Counterparts. This Agreement may be executed in multiple counterparts, each of which, when so executed, shall be deemed an original, but all such counterparts, taken together, shall constitute one and the same Agreement.

Governing Law. This Agreement will be governed by federal law applicable to Lender and, to the extent not preempted by federal law, the laws of the State of Washington without regard to its conflicts of law provisions. This Agreement has been accepted by Lender in the State of Washington.

Notices. Any notice required to be given under this Agreement shall be given in writing, and, shall be effective when actually delivered, when actually received by telefacsimile (unless otherwise required by law), when deposited with a nationally recognized overnight courier, or if mailed, when deposited in the United States mail, as first class, certified or registered mail postage prepaid, directed to the addresses shown near the beginning of this Agreement. Any party may change its address for notices under this Agreement by giving formal written notice to

the other parties, specifying that the purpose of the notice is to change the party's address.

No Waiver by Lender. Lender shall not be deemed to have waived any rights under this Agreement unless such waiver is given in writing and signed by Lender. No delay or omission on the part of Lender in exercising any right shall operate as a waiver of such right or any other right. A waiver by Lender of a provision of this Agreement shall not prejudice or constitute a waiver of Lender's right otherwise to demand strict compliance with that provision or any other provision of this Agreement. No prior waiver by Lender, nor any course of dealing among Lender, Landlord, and Tenant shall constitute a waiver of any of Lender's rights or of any of Landlord's and/or Tenant's obligations as to any future transactions. Whenever the consent of Lender is required under this Agreement, the granting of such consent by Lender in any instance shall not constitute continuing consent to subsequent instances where such consent is required and in all cases such consent may be granted or withheld in the sole discretion of Lender.

Severability. If a court of competent jurisdiction finds any provision of this Agreement to be illegal, invalid, or unenforceable as to any circumstance, that finding shall not make the offending provision illegal, invalid, or unenforceable as to any other circumstance. If feasible, the offending provision shall be considered modified so that it becomes legal, valid and enforceable. If the offending provision cannot be so modified, it shall be considered deleted from this Agreement. Unless otherwise required by law, the illegality, invalidity, or unenforceability of any provision of this Agreement shall not affect the legality, validity or enforceability of any other provision of this Agreement.

Successors. This Agreement shall extend to and bind the respective heirs, personal representatives, successors and assigns of the parties to this Agreement.

AGREEMENT FOR EASEMENTS
(with special power of attorney)

AGREEMENT FOR EASEMENTS (this "Agreement"), dated as of November 9, 2023, by and between MYRON GEMMER ("**Grantor**"), and MJS INVESTORS ACQUISITION, LLC, a Washington limited liability company and/or assigns ("**Buyer**").

1. **Purchase and Sale Agreement for Subject Property**. Bradley Gemmer and Grantor (collectively, "**Seller**") and Buyer are parties to a Commercial & Investment Real Estate Purchase & Sale Agreement dated as of July 3, 2023 (including the Addendum attached thereto), as amended, most recently by Fourth Amendment dated on or about the date of this Agreement (as amended, "**Purchase and Sale Agreement**"), for the property in Marysville, Snohomish County, Washington identified as Tax Parcel Nos. 31051900400900 and (a portion of) 31051900401100, and legally described on **Exhibit A** of this Agreement ("**Subject Property**").

2. **Easements for Subject Property.** Grantor Seller and Buyer have agreed that, on or before Closing under the Purchase and Sale Agreement ("**Closing**"), Buyer shall have an Access Easement and a Utilities Easement (each, an "**Easement**") across certain parcels of land adjacent to the Subject Property and owned by Grantor. Grantor's property ("**Grantor Property**") is legally described on **Exhibit B** of this Agreement. This Agreement is and the Easements will be appurtenant to the Subject Property. The Easements will be for the purpose of facilitating the development of a residential community on the Subject Property. Grantor acknowledges that he is entering into this Agreement, and will grant the Easements, as an accommodation to Seller and Buyer to facilitate the development of the Subject Property, and without consideration.

3. **Easements to be Granted; Locations of Easement Tracts.** Grantor shall grant the Easements to Seller or Buyer, as the case may be, either (i) at any time after Buyer's removal of the Feasibility Contingency under the Purchase and Sale Agreement, within five business days after Buyer's written request to Grantor, or (ii) at Closing, whichever occurs first, by executing, acknowledging and delivering (if at Closing, delivery shall be made into the escrow for the Closing) an Access Easement substantially in the form attached to this Agreement as **Exhibit D** ("**Access Easement**"), and a Utilities Easement substantially in the form attached to this Agreement as **Exhibit E** ("**Utilities Easement**" and, with the Access Easement, "**Easements**"). The timing of execution and recording of each Easement shall be determined by Buyer in its sole discretion. The Subject Property, Grantor Property and presently contemplated locations of the Easements are depicted on **Exhibits C-1, C-2, and C-3** of this Agreement. The location of the tract of each Easement on the Grantor Property shall be as so depicted, and Grantor approves those depicted locations; but those locations shall be subject to adjustment or relocation to such revised locations as may be designated by Buyer as meeting the approval of the City of Marysville and utility providers and in any event the adjusted or revised tract locations shall not have a material adverse effect on the use or developability of the Grantor Property compared to other possible locations on the Grantor Property. Buyer shall keep Seller and Grantor informed and up to date as to changes in the locations of the tracts of each Easement after the date of this Agreement.

4. **Dedication in Lieu of Easements.** It may be determined, with the approval of or requirement by the City, that one or both Easement Tracts (as they may be adjusted or relocated as provided in **Section 3**) shall be dedicated to the City directly by Grantor, as an alternative to the grant of the subject Easement(s) as contemplated by **Section 3** and other provisions of this Agreement. In that event, Buyer shall so notify Grantor, and may give such notice at any time after removal of the Feasibility Contingency under the Purchase and Sale Agreement, and Grantor shall execute such dedication deeds and other documents directly to the City as may be required or requested by the City, and generally in the manner that would be required if dedication were required after the grant of the Easements to Grantee, as provided in the forms of Easements attached to this Agreement. In the event of a direct dedication as described in this **Section 4**. Grantor shall continue to have the obligation to cooperate with Buyer's obligations to obtain permits and approvals for its residential development, as set forth in greater detail in the in the forms of Easements attached to this Agreement.

5. **Special Power of Attorney.** If Grantor does not execute and deliver each Easement when and as required by **Section 3** then Buyer shall have the right (but not the obligation) to execute

SEE ATTACHED CORRECTED PAGE 2

2. **Easements for Subject Property.** Seller and Buyer have agreed that, after Closing under the Purchase and Sale Agreement ("**Closing**"), Buyer shall have an Access Easement and a Utilities Easement (each, an "**Easement**") across certain parcels of land adjacent to the Subject Property and owned by Grantor. Grantor's property (**"Grantor Property**") is legally described on **Exhibit B** of this Agreement. This Agreement is and the Easements will be appurtenant to the Subject Property. The Easements will be for the purpose of facilitating the development of a residential community on the Subject Property. Grantor acknowledges that he is entering into this Agreement, and will grant the Easements, as an accommodation to Seller and Buyer to facilitate the development of the Subject Property, and without consideration.

3. **Easements to be Granted; Locations of Easement Tracts**. Grantor shall grant the Easements to Seller or Buyer, as the case may be, either (i) at any time after Buyer's removal of the Feasibility Contingency under the Purchase and Sale Agreement, within five business days after Buyer's written request to Grantor, or (ii) at Closing, whichever occurs first, by executing, acknowledging and delivering (if at Closing, delivery shall be made into the escrow for the Closing) an Access Easement substantially in the form attached to this Agreement as **Exhibit D** ("**Access Easement**"), and a Utilities Easement substantially in the form attached to this Agreement as **Exhibit E** ("**Utilities Easement**" and, with the Access Easement, "**Easements**"). The timing of execution and recording of each Easement shall be determined by Buyer in its sole discretion. The Subject Property, Grantor Property and presently contemplated locations of the Easements are depicted on **Exhibit C-1** of this Agreement. Grantor approves the location of the tract of each Easement on the Grantor Property as so depicted, but acknowledges and agrees those locations shall be subject to adjustment or relocation to such revised locations as may be designated by Buyer as meeting the approval of the City of Marysville and utility providers and in any event the adjusted or revised tract locations shall not have a material adverse effect on the use or developability of the Grantor Property compared to other possible locations on the Grantor Property. Buyer shall keep Seller and Grantor informed and up to date as to changes in the proposed locations of the tracts of each Easement after the date of this Agreement.

4. **Dedication in Lieu of Easements**. It may be determined, with the approval of or requirement by the City, that one or both Easement Tracts (as they may be adjusted or relocated as provided in **Section 3**) shall be dedicated to the City directly by Grantor, as an alternative to the grant of the subject Easement(s) as contemplated by **Section 3** and other provisions of this Agreement. In that event, Buyer shall so notify Grantor, and may give such notice at any time after removal of the Feasibility Contingency under the Purchase and Sale Agreement, and Grantor shall execute such dedication deeds and other documents directly to the City as may be required or requested by the City, and generally in the manner that would be required if dedication were required after the grant of the Easements to Grantee, as provided in the forms of Easements attached to this Agreement. In the event of a direct dedication as described in this **Section 4**. Grantor shall continue to have the obligation to cooperate with Buyer's obligations to obtain permits and approvals for its residential development, as set forth in greater detail in the in the forms of Easements attached to this Agreement.

5. **Special Power of Attorney.** If Grantor does not execute and deliver each Easement when and as required by **Section 3** then Buyer shall have the right (but not the obligation) to execute

and acknowledge the missing Easement(s) on Grantor's behalf, as Grantor's attorney-in-fact pursuant to a special power of attorney, hereby granted by Grantor to Buyer. This power of attorney is coupled with an interest and is irrevocable, shall not be affected by the death or disability of the principal, and shall be binding on Grantor and his heirs, successors and assigns. This power of attorney shall also apply to the same extent to (i) the execution and delivery by Grantor of any deed accomplishing the dedication of any tract under either Easement (or portion thereof) as required by either Easement (or any easement in favor of the City prior to or as an alternative to dedication), or as provided in **Section 4**, (ii) the obligation to terminate the Septic System Easement as provided in **Section 7**, and (iii) the obligation under each Easement to cooperate with Buyer's permitting efforts, and for such purposes this special power of attorney shall continue beyond Closing and the recordation of the Easements, to the extent Grantor does not perform the applicable obligations within 5 business days after Buyer's request. The appointment of Buyer as Grantor's attorney-in-fact shall be with the right and power of full substitution by Buyer in favor of the successors and assigns of Buyer's interest in the Purchase and Sale Agreement or its title to the Subject Property.

6. **Blanket Encumbrance until Locations Finalized.** Until the location of each Easement tract is finalized as provided above and the Easement recorded, this Agreement shall be treated as an encumbrance over, across, upon, and under the entirety of the Grantor Property. If the location of either Easement has not been finalized as of the date for recording of the Easement under **Section 3**, then it shall be entered into as an easement and encumbrance over, across, upon, and under the entirety of Grantor Property, and the form of such Easement shall be modified accordingly. When the location is thereafter finalized, Buyer shall cause the applicable Easement instrument to be modified to reduce the encumbrance of that Easement to the location of the Tract as so finalized. Notwithstanding the foregoing, this Agreement shall remain in place and of record until the performance by the parties of their obligations in **Section 7** and **Section 8**.

7. **Option to Decommission Existing Septic System**. Grantor grants Buyer the right, after Closing, to decommission the drainfield and septic system currently on portions of the Subject Property and Grantor's Property and serving the 76 Station Parcel (as defined in **Section 8**), and to terminate the Easement For Septic System dated July 31, 2008, recorded under Snohomish County Recording No. 200807310560 ("**Septic System Easement**"), currently burdening portions of the Subject Property and Grantor Property. Buyer shall provide at least 10 days' advance written notice prior to commencing any decommissioning work; provided, no such decommissioning shall occur unless and until Buyer constructs a sewer line pursuant to the Utilities Easement ("**Sewer Line**") (including the stub to the 76 Station Parcel as provided in **Section 8**) and the Sewer Line is connected and operational. Grantor shall cooperate with Buyer and execute and acknowledge any instrument necessary to remove the drainfield and septic system from the Grantor Property and otherwise comply with all state and local laws applicable to the decommissioning and in terminating the Septic System Easement.

8. **Sewer Connection to Grantor Property.** Buyer shall stub the Sewer Line to Parcel 2 of the Grantor Property, as described on Exhibit B ("**76 Station Parcel**") as part of the original construction of the Sewer Line. Grantor shall be responsible for any connection of the Sewer Line to the existing building on the 76 Station Parcel and the cost thereof, as well as any sanitary sewer impact fees arising

from the stubbing or connection of the Sewer Line to the 76 Station Parcel. Notwithstanding the foregoing, at Buyer's election, Buyer may elect to connect the Sewer Line to the existing building on the 76 Station Parcel. If Buyer elects to make that connection, Grantor shall grant Buyer a license to enter onto the 76 Station Parcel for that purpose, and shall reimburse Buyer for the actual costs of such connection incurred by Buyer within 30 days after receipt of a reasonably detailed invoice from Buyer.

9. **Termination of Purchase and Sale Agreement.** If the Purchase and Sale Agreement terminates before Closing for any reason other than the default of Seller, then Grantor shall have the right to request that Buyer shall promptly upon Seller's or Grantor's request execute such instrument for recording as relinquishes Buyer's rights (as an express third-party beneficiary) under this Agreement and (if the Seller under the Purchase and Sale Agreement) removes this Agreement from record title to the Subject Property and the Grantor Property.

10. **Binding Effect**. This Agreement touches and concerns the Subject Property and the Grantor Property and shall bind and inure to the benefit of Grantee, Grantor, and their respective successors and assigns, including without limitation any owners association established for the Subject Property. In addition, until Buyer (or its successors and assigns) has acquired the Subject Property, Buyer (or its successors and assigns) shall be an express third-party beneficiary of Grantor's obligations under this Agreement.

11. **Further Acts**. The parties shall execute and deliver such further documents and instruments and take such other further actions as may be reasonably necessary to carry out the intent and provisions of this Agreement.

Document Title: ACCESS ROAD EASEMENT AND AGREEMENT

Grantor: MYRON GEMMER

Grantee: [_____]

Legal Description:

Abbreviated Legal Description: Parcels A and B, BLA22-006, Snohomish Cty. WA

Full Legal Description: See Exhibit A attached.

Assessor's Tax Parcel No.: 31051900400900, 31051900401100; 31051900401000; 00530800100902

ACCESS ROAD EASEMENT AND AGREEMENT
(with Temporary Construction Easement)

ACCESS ROAD EASEMENT AND AGREEMENT (this "**Agreement**") dated as of _____, 20__ by and between MYRON GEMMER ("**Grantor**"), and _____, a _____, and its successors and assigns ("**Grantee**") **[insert Seller or Buyer, as the case may be; see Agreement for Easements]**.

BACKGROUND

A. Grantor owns the real property in Marysville, Snohomish County, Washington identified as Tax Parcel Nos. 31051900401100 (a portion), 31051900401000, and 00530800100902, and legally described on **Exhibit A** ("**Grantor Property**") **[update tax parcel nos. to reflect updates after BLA]**.

B. Grantee owns the real property in Marysville, Snohomish County, Washington identified as Tax Parcel Nos. 31051900400900 and (a portion of) 31051900401100, and legally described on **Exhibit B** ("**Grantee Property**"). Grantee has entered into a real estate purchase and sale agreement for the sale of the Grantee Property to MJS Investors Acquisition, LLC and/or assigns ("**Buyer**"); Buyer

intends to develop a residential community on the Grantee Property **[delete preceding sentence if Easement granted at Closing]**.

C. By Agreement for Easements dated as of November ___, 2023 ("**Agreement for Easements**"), Grantor and Buyer agreed to enter into this Agreement to provide for a right-of-way on the Grantor Property, for ingress and egress to and from the Grantee Property and from and to NE 172nd Street, and for utilities.

EASEMENT AND AGREEMENT

Grantor and Grantee agree as follows:

1. **Grant of Easement; Nature of Easement**. Grantor hereby grants to Grantee an easement ("**Easement**") over, under, and across the Grantor Property, in the 50-foot wide right-of-way tract described on **Exhibit C** ("**Easement Tract**"). The Easement is perpetual, until such time as it terminates in accordance with this Agreement, and non-exclusive as provided more fully in this Agreement. The Grantor Property, Grantee Property, and Easement Tract are depicted on **Exhibit D**. Grantor and Grantee intend that the Agreement for Easements referred to in the Recitals shall no longer encumber the entirety of the Grantor Property with respect to the Easement, and that this Agreement encumber the Grantor Property with the Easement only to the extent of the described Easement Tract (together with the TCE tract described below) **[adjust preceding sentence if location of Easement Tract not yet finalized when executed]**.

2. **Purpose of Easement.** The purpose of the Easement is to provide vehicular and pedestrian ingress and egress to and from the Grantee Property and from and to NE 172nd Street, and for underground utilities serving the Grantee Property. Before construction of the Improvements (as defined below), the Easement shall be non-exclusive as to any use of the Easement Tract by Grantor that is not inconsistent with the use by Grantee under this Agreement. Upon construction of the Improvements, the Easement Tract and Improvements may also be used by Grantor, for the benefit of the Grantor Property, in common with Buyer as Grantee, in accordance with all applicable requirements, and subject to any restrictions imposed by, the City of Marysville ("**City**"). Such use by Grantor shall be at Grantor's sole risk and expense, and the indemnity provisions of **Section 6** shall apply to Grantor with respect to its use of the Easement Tract and Improvements to the same extent as they apply to Grantee, with the identities of the parties reversed.

3. **Improvements**. Buyer as Grantee shall have the right to improve the Easement Tract with such improvements as may be necessary or appropriate for the subdivision and development of Grantee's residential community on the Grantee Property (and other property, if applicable), and/or as may be required by the City. These improvements (collectively, "**Improvements**") may include without limitation an asphalt roadway, sidewalks and curbs, frontage improvements, signage and other traffic control improvements, and underground utilitity lines.

4. **Construction; Temporary Construction Easement; Restoration.** Buyer as Grantee shall construct and cause the construction of the Improvements in accordance with good industry practices and all applicable laws and legal requirements, at Grantee's sole cost and expense, lien-free. To the

extent any of the Improvements are for the benefit of Grantor, however, Grantor shall bear a reasonable share of the cost thereof. For these construction purposes, and for planning, surveying, engineering, inspection, and related purposes, Grantor grants to Grantee a temporary construction easement ("**TCE**") of 30 feet in width on either side of and along the entirety of the Easement Tract ("**TCE Tract**", as shown with cross-hatching on **Exhibit D**. Upon completion of construction, Grantee shall restore the TCE Tract to as good or a better condition as before Grantee's construction activities. Upon the completion of any such restoration work, the TCE shall terminate.

5. **Maintenance**. For the term of the Easement, Grantee shall keep the Easement Tract (and during construction, the TCE Tract) in good condition and repair, and in compliance with all requirements of the City and other authorities with jurisdiction, at Grantee's sole cost and expense, lien-free.

6. **Indemnity**. The activities of Grantee and its contractors, consultants, and agents (collectively, "**Grantee Parties**"), on the Easement Tract and TCE Tract for construction and related purposes under **Section 4** and maintenance under **Section 5** shall, as between Grantor and Grantee, be at the sole risk of Grantee. Grantee shall defend and indemnify Grantor, and hold Grantor harmless, from and against any and all loss, cost, damage, liability, property damage, bodily injury, third-party claim and expenses (including reasonable attorneys' fees) whatsoever (collectively, "**Loss**") arising out of or resulting from the presence of the Grantee Parties on the Easement Tract or TCE Tract for construction of the Improvements and related activities. The foregoing obligations of Grantee shall not apply, however, to the extent the Loss arises out of or results from the negligence or misconduct of Grantor or its contractors, consultants, or agents (collectively, "**Grantor Parties**"); in that event, Grantee shall only be liable to the extent of its own negligence or misconduct. For the sole purpose of giving effect to the obligations in this **Section 6** with respect to claims brought by its employees, if any, Grantor and Grantee have negotiated and agreed on Grantee's waiver of its immunity as an employer under Washington industrial insurance laws.

7. **Insurance**. Grantee shall cause the Easement Tract and Improvements to be covered under the liability and property insurance policy or policies that Grantee maintains for the Grantee Property. To the extent such coverage is reasonably available, Grantee's insurance coverage shall include contractual liability for Grantee's indemnity obligations under **Section 6**.

8. **Dedication**. By agreement with Grantee or otherwise, the City may require that the Easement Tract and some or all of the Improvements be dedicated for public purposes. Grantee shall not oppose and shall cooperate with any such dedication, including by executing and delivering one or more deeds or other instruments of conveyance or transfer of the Easement Tract or Improvements to the City or other transferee and taking such other further actions as may be required by the City. Without limiting the generality of the foregoing, prior to or as an alternative to dedication of title to the Easement Tract, the City may require a easement for access and utilities in its favor in the same location as the Easement Tract (and TCE Tract). Upon such conveyance and transfer to the City (or the grant of any such easement to the City on an exclusive basis), and any required written acceptance by the City, the Easement and this Agreement shall automatically terminate, except that the indemnity provisions of

Section 6 shall survive as to any Loss arising before termination. Grantee shall have the sole responsibility for any maintenance bonding of any of the Improvements.

9. **Cooperation with Permitting**. Grantor shall also cooperate with Buyer as Grantee in obtaining all permits and entitlements and other governmental and private approvals necessary or convenient to develop the Grantee Property and to construct the Improvements on the Easement Tract, and Grantor shall execute all documents Grantee may reasonably require for the foregoing, including without limitation applications for permits or approvals; provided, however, Grantor shall not be required to incur out-of-pocket expenses in providing its cooperation that are not reimbursed by Grantee. Grantee shall pay all costs related to its applications for permits and approvals (including any required for the Improvements).

10. **Remedies**. Grantor shall indemnify Grantee and hold Grantee harmless from and against any Loss resulting from any failure by Grantor to perform its obligations under **Sections 8 and 9** of this Agreement. In addition, Grantee may pursue any and all available remedies against Grantor for any such failure. This includes without limitation the right to pursue and obtain an order of specific performance of such obligations or other equitable relief. In addition, Grantor confirms that, in the Agreement for Easements, Grantor has granted a special power of attorney to Buyer to carry out various obligations on Grantor's behalf, including obligations under this Agreement following the execution and recordation of this Agreement.

11. **Binding Effect.** This Agreement touches and concerns the Grantor Property and Grantee Property and shall bind and inure to the benefit of Grantor, Grantee, and their respective successors and assigns, including without limitation any owners association established for the Grantee Property. In addition, until Buyer (or its successors and assigns) has acquired the Grantee Property, Buyer (or its successors and assigns) shall be an express third-party beneficiary of Grantor's obligations under this Agreement. **[Delete if this is executed at Closing]**

12. **Attorneys' Fees.** In any litigation, arbitration, or other proceeding arising out of or brought to enforce or interpret this Agreement, the prevailing party shall be entitled to an award of its reasonable attorneys' fees incurred therein, in the preparation therefor, and on any appeal or rehearing thereof.

13. **Further Acts.** Grantor and Grantee shall each execute further documents and instruments and take such other further actions as may be reasonably necessary to provide assurances of performance of and otherwise carry out the intent and provisions of this Agreement.

14. **Counterparts**. This Agreement may be executed in multiple identical counterparts which taken together constitute one and the same instrument.

Document Title:	UTILITIES EASEMENT AND AGREEMENT
Grantor:	MYRON GEMMER
Grantee:	[_____][1]

Legal Description:

Abbreviated Legal Description: Parcels A and B, BLA22-006, Snohomish Cty. WA

Full Legal Description: See Exhibit A attached.

Assessor's Tax Parcel No.: 31051900400900, 31051900401100; 00530800100902; 31051900401000

UTILITIES EASEMENT AND AGREEMENT

UTILITIES EASEMENT AND AGREEMENT (this "Agreement") dated as of _____, 20__ by and between MYRON GEMMER (, "**Grantor**"), and _____, a _____, and its successors and assigns ("**Grantee**"). **[Insert Seller or Buyer, as the case may be; see Agreement for Easements]**

BACKGROUND

A. Grantor owns the real property commonly in Marysville, Snohomish County, Washington identified as Tax Parcel Nos. 31051900401100 (a portion), 31051900401000, and 00530800100902, and legally described on **Exhibit A ("Grantor Property")**. **[update tax parcel nos. to reflect updates after BLA]**.

B. Grantee owns the real property in Marysville, Snohomish County, Washington identified as Tax Parcel Nos. 31051900400900 and (a portion of) 31051900401100, and legally described on

_____

Exhibit B ("**Grantee Property**"). Grantee has entered into a real estate purchase and sale agreement for the sale of the Grantee Property to MJS Investors Acquisition, LLC and/or assigns ("**Buyer**"); Buyer intends to develop a residential community on the Grantee Property **[delete preceding sentence if Easement granted at Closing]**.

C. By Agreement for Easements dated as of November ___, 2023 ("**Agreement for Easements**"), Grantor and Buyer agreed to enter into this Agreement to provide for an easement over the Grantor Property for utilities serving the Grantee Property.

EASEMENT AND AGREEMENT

Grantor and Grantee agree as follows:

1. **Grant of Easement; Nature of Easement**. Grantor hereby grants to Grantee an easement ("**Easement**") over, under, and across the Grantor Property, in the tract of varying width described on **Exhibit C** ("**Easement Tract**"). The Easement is perpetual, until such time as it terminates in accordance with this Agreement, and non-exclusive as provided more fully in this Agreement. The Grantor Property, Grantee Property, and the Easement Tract are depicted on **Exhibit D**. Grantor and Grantee intend that the Agreement for Easements referred to in the Recitals shall no longer encumber the entirety of the Grantor Property with respect to the Easement, and that this Agreement encumber the Grantor Property with the Easement only to the extent of the described Easement Tract (together with the TCE tract described below). **[adjust preceding sentence if location of Easement Tract not yet finalized when executed]**

2. **Purpose of Easement**. The purpose of the Easement is to provide for undersground utilities serving the Grantee Property, including without limitation a santiary sewer line. Before construction of the Improvements (as defined below), the Easement shall be non-exclusive as to any use of the Easement Tract by Grantor that is not inconsistent with the use by Grantee under this Agreement. Upon construction of the Improvements, the Easement Tract and Improvements may also be used by Grantor, for the benefit of the Grantor Property, in common with Buyer as Grantee, in accordance with all applicable requirements, and subject to any restrictions imposed by the City of Marysville ("**City**") or applicable utility providers. Such use by Grantor shall be at Grantor's sole risk and expense, and the indemnity provisions of **Section 6** shall apply to Grantor with respect to its use of the Easement Tract and Improvements to the same extent as they apply to Grantee, with the identities of the parties reversed.

3. **Improvements**. Buyer as Grantee shall have the right to improve the Easement Tract with underground utility lines as may be necessary or appropriate for the subdivision and development of Grantee's residential community on the Grantee Property (and other property if applicable), and/or as may be required by the City. These improvements are collectively referred to in this Agreement as "**Improvements**". The Improvements may include without limitation power lines, telecom lines, gas lines, storm drainage lines, sanitary sewer lines, and water lines, including pipes, conduits, manholes, and other equipment and facilities related to those lines.

4. **Construction; Temporary Construction Easement; Restoration.** Buyer as Grantee shall construct and cause the construction of the Improvements in accordance with good industry practices

and all applicable laws and legal requirements, at Grantee's sole cost and expense, lien-free. To the extent any of the Improvements are for the benefit Grantor, however, Grantor shall bear a reasonable share of the cost thereof. For these construction purposes and for planning, surveying, engineering, inspection, and related purposes, Grantor grants to Grantee a temporary construction easement ("**TCE**") of 15-feet in width on either side of and along the entirety of the Easement Tract, as shown with cross-hatching on **Exhibit D** ("**TCE Tract**"); provided, if a portion of the TCE Tract would encroach upon neighboring property, the TCE Tract shall extend only to the property boundary. Upon completion of construction, Grantee shall restore the TCE Tract to as good or a better condition as before Grantee's construction activities. Upon the completion of any such restoration work, the TCE shall terminate.

5. **Maintenance**. For the term of the Easement, Grantee shall keep the Easement Tract (and during construction, the TCE Tract) in good condition and repair, and in compliance with all requirements of the City and other authorities with jurisdiction, at Grantee's sole cost and expense, lien-free.

6. **Indemnity**. The activities of Grantee and its contractors, consultants, and agents (collectively, **Grantee Parties**"), on the Easement Tract and TCE Tract for construction and related purposes under **Section 4** and maintenance under **Section 5** shall, as between Grantor and Grantee, be at the sole risk of Grantee. Grantee shall defend and indemnify Grantor, and hold Grantor harmless, from and against any and all loss, cost, damage, liability, property damage, bodily injury, third-party claim and expenses (including reasonable attorneys' fees) whatsoever (collectively, "**Loss**") arising out of or resulting from the presence of the Grantee Parties on the Easement Tract or TCE Tract for construction of the Improvements and related activities. The foregoing obligations of Grantee shall not apply, however, to the extent the Loss arises out of or results from the negligence or misconduct of Grantor or its contractors, consultants, or agents (collectively, "**Grantor Parties**"); in that event, Grantee shall only be liable to the extent of its own negligence or misconduct. For the sole purpose of giving effect to the obligations in this **Section 6** with respect to claims brought by its employees, if any, Grantor and Grantee have negotiated and agreed on Grantee's waiver of its immunity as an employer under Washington industrial insurance laws.

7. **Insurance**. Grantee shall cause the Easement Tract and Improvements to be covered under the liability and property insurance policy or policies that Grantee maintains for the Grantee Property. To the extent such coverage is reasonably available, Grantee's insurance coverage shall include contractual liability for Grantee's indemnity obligations under **Section 6**.

8. **Dedication**. By agreement with Grantee or otherwise, the City or applicable utility providers may require that the Easement Tract and some or all of the Improvements be dedicated for public purposes or to one or more utility providers, as the case may be. Grantee shall not oppose and shall cooperate with any such dedication, including by executing and delivering one or more deeds or other instruments of conveyance or transfer of the Easement Tract or Improvements to the City or other transferee and taking such other further actions as may be required by the City or applicable utility providers. Without limiting the generality of the foregoing, prior to or as an alternative to dedication of title to the Easement Tract, the City may require an easement for access and utilities in its favor in the same location as the Easement Tract (and TCE Tract). Upon such conveyance and transfer (or the grant

of any such easement to the City or utility providers on an exclusive basis), and any required written acceptance by the City or applicable utility providers, the Easement and this Agreement shall automatically terminate, except that the indemnity provisions of **Section 6** shall survive as to any Loss arising before termination. Grantee shall have the sole responsibility for any maintenance bonding of any of the Improvements.

9. **Cooperation with Permitting**. Grantor shall also cooperate with Buyer as Grantee in obtaining all permits and entitlements and other governmental and private approvals necessary or convenient to develop the Grantee Property and to construct the Improvements on the Easement Tract, and Grantor shall execute all documents Grantee may reasonably require for the foregoing, including without limitation applications for permits or approvals; provided, however, Grantor shall not be required to incur out-of-pocket expenses in providing its cooperation that are not reimbursed by Grantee. Grantee shall pay all costs related to its applications for permits and approvals (including any required for the Improvements).

10. **Remedies**. Grantor shall indemnify Grantee and hold Grantee harmless from and against any Loss resulting from any failure by Grantor to perform its obligations under **Sections 8 and 9** of this Agreement. In addition, Grantee may pursue any and all available remedies against Grantor for any such failure. This includes without limitation the right to pursue and obtain an order of specific performance of such obligations or other equitable relief. In addition, Grantor confirms that, in the Agreement for Easements, Grantor has granted a special power of attorney to Buyer to carry out various obligations on Grantor's behalf, including obligations under this Agreement following the execution and recordation of this Agreement.

11. **Binding Effect.** This Agreement touches and concerns the Grantor Property and Grantee Property and shall bind and inure to the benefit of Grantor, Grantee, and their respective successors and assigns, including without limitation any owners association established for the Grantee Property. In addition, until Buyer (or its successors and assigns) has acquired the Grantee Property, Buyer (or its successors and assigns) shall be an express third-party beneficiary of Grantor's obligations under this Agreement. **[Delete if this is executed at Closing]**

12. **Attorneys' Fees.** In any litigation, arbitration, or other proceeding arising out of or brought to enforce or interpret this Agreement, the prevailing party shall be entitled to an award of its reasonable attorneys' fees incurred therein, in the preparation therefor, and on any appeal or rehearing thereof.

13. **Further Acts.** Grantor and Grantee shall each execute further documents and instruments and take such other further actions as may be reasonably necessary to provide assurances of performance of and otherwise carry out the intent and provisions of this Agreement.

14. **Counterparts.** This Agreement may be executed in multiple identical counterparts which taken together constitute one and the same instrument.

SEPA ENVIRONMENTAL CHECKLIST
APPLICATION REVIEW

Purpose of checklist:
Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

***Instructions for applicants*:**
This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. **You may use "not applicable" or "does not apply" only when you can explain why it does not apply and not when the answer is unknown.** You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to **all parts of your proposal**, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Instructions for Lead Agencies:
Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

Use of checklist for nonproject proposals:
For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B plus the SUPPLEMENTAL SHEET FOR NONPROJECT ACTIONS (part D). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in Part B - Environmental Elements –that do not contribute meaningfully to the analysis of the proposal.

Application Format
The application will only be accepted if the original form is used (with typewritten answers in the spaces provided) or the application is reproduced in identical form.

NOTE: The checklist questions apply to all parts of your proposal, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. You may be asked to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Required Attachments
Submit the original checklist form and six (6) copies (for a total of seven (7)) along with seven (7) copies of each of the following:

1. Vicinity map clearly showing the location of the project with respect to public streets and other parcels and development
2. Site plan*
3. Conceptual building elevations
4. Preliminary Civil Plans
5. Wetland Delineation, if applicable
6. Geotechnical Reports, if applicable
7. Critical Areas Report (fish and wildlife habitat), if applicable

**The site plan must show north arrow and engineering scale; any significant or natural features such as creeks, wetlands, steep slopes; dimensions and shape of the lot; location and size of existing and proposed buildings and development, including parking and landscape areas, adjacent streets and point of ingress and egress, and adjacent uses.*

Correspondence
Note that all correspondence regarding the environmental review of your project will be sent to the person listed as **Applicant.**

Fees
There is a nonrefundable application fee for all environmental checklists. Submit the fee with the application(s) and make checks payable to the City of Marysville. The required fees for SEPA Review may be found here:
https://www.codepublishing.com/WA/Marysville/#!/Marysville22G/Marysville22G030.html#22G.030.020

Pre-application Conference
Most projects that are not categorically exempt from SEPA will require a pre-application conference; in some cases, at the discretion of the Community Development Director, the pre-application conference may be waived. The pre-application conference must be conducted prior to the submittal of the environmental checklist.

SEPA Exempt Determinations

Projects that meet the thresholds for categorical exemptions of Chapter 22E.030 MMC are exempt from filing an environmental checklist. All other project and non-project actions require a completed environmental checklist and a project permit application to be submitted. If an applicant feels that their proposal should be considered to be SEPA-exempt, the applicant can submit a letter requesting a SEPA exempt determination with the environmental checklist and fee. The Community Development Director will review the request and if the application is determined to be SEPA exempt, a letter will be issued confirming the SEPA exempt status.

Project Phasing
The Checklist questions apply to all parts of your proposal, even if you plan to phase the project over a period of time or on different parcels of land. You must include any additional information that helps describe your proposal or its environmental effects. You may be asked to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact(s).

SEPA Appeals
Any agency or person may appeal a Determination of Non Significance (DNS) or Determination of Significance (DS) by completing and submitting an appeal form to the Hearing Examiner within fourteen (14) calendar days of the date the determination is final. Such appeals must be filed with the City Clerk. Appeals of environmental determinations under SEPA, including administrative appeals of a threshold determination, shall be heard by the Hearing Examiner and shall proceed pursuant to Chapter 22G.010 Article VIII *Appeals*. There is a nonrefundable $500 Administrative

Appeal fee to be submitted with appeal.

A. BACKGROUND

1. Name of proposed project, if applicable:

   Lakewood Heights PRD

2. Name of applicant: http://sepaguidance.epermitting.wa.gov/DesktopModules/help.aspx?project=0&node=554

   MJS Investors

3. Address and phone number of applicant and contact person:

   Applicant: 11201 SE 8th St. Ste 116
   Bellevue, WA 98004
   425.559.2726

Contact: Land Technologies, Inc.
18820 3rd Ave NE
Arlington, WA 98223
360.652.9727

4. Date checklist prepared:

   January 22, 2024

5. Agency requesting checklist:

   City of Marysville

6. Proposed timing or schedule (including phasing, if applicable):

   Work to commence as soon as permits can be approved; expect summer 2024

7. Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.

   No, this 182 lot PRD is the final plan for the site. Adjacent properties will be developed by other developers and not as an "expansion" of this project.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

   1. ***SEPA***
   2. ***Critical Area Report***
   3. ***Traffic Report***
   4. ***Geotechnical Report***
   5. ***Stormwater Management Report***
   6. ***Stormwater Pollution Prevention Plan***

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

An Administrative Rezone is required. This is trading areas to remove split zoning.

10. List any government approvals or permits that will be needed for your proposal, if known.

From the City of Marysville:

1. ***Land Disturbing Activity Permit***
2. ***SEPA Determination***
3. ***PRD Binding Site Plan Approval***
4. ***Construction Stormwater General Permit from DOE***
5. ***Forest Practice Permit from DNR***

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)

"Lakewood Heights PRD" is a 29.48 Acre Site in the City of Marysville. It is zoned R-6.5 Single-Family High. The proposal is for a 182 lot Planned Residential Development.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

SE ¼ Section 19, Township 31N, Range 5E

Address is 1125 & 1507 172nd St NE, Marysville WA 98271

B. ENVIRONMENTAL ELEMENTS

1. Earth

a. General description of the site
(*bold/italicize*): ***Flat***, rolling, hilly, steep slopes, mountainous, other _____

b. What is the steepest slope on the site (approximate percent slope)?

The site is mostly "level" with slopes averaging in the range of 0 to 5 percent for the majority of the developable area. The site has an average slope of 3.89%.

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.

Per NRCS mapping, the majority of the site is mapped as moderately well-drained Alderwood gravelly sandy loan. The eastern side of the site is mapped as Kitsap silt loam. Neither of these soils are considered hydric or wetland soils.

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

No

e. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.

Site grading for development of lots, roads and homesites covers about 27 acres. There is a clearing of a mixture of pastures/hay crops and wooded areas. Grading estimates will include about 50,000 cys of total earth work. A good portion of that is stripping of organic soils and replacement with compost amended soils in the landscape areas of the site. That also includes that replacement of gravels and paving for road areas. Structural cuts and fills will come very close to balancing.

f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.

Heavy rains on exposed subgrade materials could erode surface soils picking up silt into runoff water.

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

Total Impervious Surfaces with roofs, driveways and roads is less than 60% and will be kept under the 70% Maximum allowed.

h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:

Best Management Practices (BMPs) per the Current Stormwater Management Manual are proposed. The primary concern will to be to contain any silt laden runoff from leaving the fill site. Vegetative Strips, Wattles, Plastic Covering, and Sediment Traps are a few of the options but not all inclusive.

2. **Air**

a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

Dust can be raised during dry weather earth work and exhaust from construction equipment. During operation, exhaust from onsite equipment and vehicles coming to the site. Possibility of some dust being raised moving materials around during dry weather could happen

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

No

c. Proposed measures to reduce or control emissions or other impacts to air, if any:

If there is persistent dry weather during construction, watering for dust control will be first measure of control. Combinations of keeping access ways clean of silts and dirt may be combined with watering in extreme conditions.
Construction equipment and onsite operating equipment will have all exhaust control devices in proper working order. Licensed trucks and autos emissions are controlled by licensing laws.

3. Water

a. Surface Water:

1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

There is a small wetland in a wooded portion of the NW corner of the site. There is another offsite wetland in the NE corner where a buffer extends onto this property. Any runoff from the site is picked up by Road Ditches or old Farm Ditches off this project near the RR. These ditches direct flow to the south and it eventually may get to the West Fork Quilceda Creek which is a ¼ mile south of the SW corner of the property and ½ mile south of the SE corner of the property.

2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.

There will be work within 200' of the wetlands but no work in the wetlands. There may be some buffer mitigation.

3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

None

4) Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities if known.

No

5) Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.

No

6) Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.

No discharge of waste to surface waters

b. Ground Water:

1) Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give general description, purpose, and approximate quantities if known.

No groundwater withdrawals.

2) Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: Domestic sewage; industrial, containing the following chemicals. . .; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

No waste is to be discharged to the ground.

c. Water runoff (including stormwater):

1) Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.

Runoff will be from roads, driveways, and rooftops. The runoff is being collected in biocells for treatment and will be flow-controlled in rock chamber under the treatment cell. The runoff will infiltrate through a biofilter that will

providing enhanced treatment before passing into a rock chamber for flow control.

Roof runoff will be conveyed directly into flow-control facilities after treatment and filtering through a small yard basin structure and/or a downspout filter.

In the rock chambers, flows will be metered to the MS4 stormwater conveyance. This MS4 does discharge a quarter to half mile offsite into Quilceda Creek.

2) Could waste materials enter ground or surface waters? If so, generally describe.

Not likely. All runoff is filtered before being released to rock chambers for flow control. The biofiltration through the biocells are considered enhanced treatment.

3) Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.

Drainage patterns in the vicinity will not be measurably impacted. Runoff from the graded site will be similar to the existing drainage patterns—Threshold Discharge Areas (TDAs) will be maintained.

d. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any:

Providing Erosion Control BMPs and treatment BMPs as needed. Set up site to collect and treat runoff before metering discharge to pre-development release rates.

4. Plants

a. ***Bold/Italicize*** the types of vegetation found on the site:

deciduous tree: ***alder, maple, aspen***, other
evergreen tree: ***fir,*** **cedar**, pine, other
shrubs
Grass, pasture
crop or grain **Hay and some winter wheat**
Orchards, vineyards or other permanent crops.
wet soil plants: cattail, ***buttercup***, bullrush, skunk cabbage, other
water plants: water lily, eelgrass, milfoil, other
other types of vegetation:

b. What kind and amount of vegetation will be removed or altered? http://sepaguidance.epermitting.org/DesktopModules/help.aspx?project=0&node=619

The 29.48 is acres has a mix of pasture or hay-crop fields and wooded areas. About 27 acres of this will be cleared.

c. List threatened and endangered species known to be on or near the site.

None known

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

Provide landscape buffers and screening per City of Marysville Code

e. List all noxious weeds and invasive species known to be on or near the site.

None

5. Animals

a. ***Bold/Italicize*** any birds and <u>other</u> animals which have been observed on or near the site or are known to be on or near the site. Examples include:

birds: ***hawk***, heron, eagle, ***songbirds***, other:

mammals: ***deer***, bear, elk, beaver, other:

fish: bass, salmon, trout, herring, shellfish, other _____

b. List any threatened and endangered species known to be on or near the site.

None

c. Is the site part of a migration route? If so, explain.

The Puget Sound area is all part of the Pacific Flyway. This site is not otherwise a specific migration route.

d. Proposed measures to preserve or enhance wildlife, if any:

None needed as site has been mostly farmed.

e. List any invasive animal species known to be on or near the site.

None known

6. Energy and natural resources

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

Electricity will be the primary energy source. There may be some wood stoves or solar provided by individuals later.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

No

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any:

None

7. Environmental health

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste that could occur as a result of this proposal? If so, describe.

Gasoline, motor oils, hydraulic fluid, brake fluid, and battery acids are used in vehicles accessing or working at the site. However, none will be stored at the site; placing equipment will be refueled from mobile trucks.

Once Construction is completed, just hazards associated with a residential community could occur.

1) Describe any known or possible contamination at the site from present or past uses.

There are none.

2) Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.

None

3) Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.

Gasoline, Diesel, Hydraulic Fluid, brake fluids are used in the equipment working the site. None will be stored onsite.

4) Describe special emergency services that might be required.

The likeliest emergency service would be for someone hurt in the operation of the sitework. This could be physical injury from heavy equipment operations requiring ambulance service to the hospital.

5) Proposed measures to reduce or control environmental health hazards, if any:

Think Safety and Operate per OSHA Guidelines

b. Noise

1) What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?

There are the railroad tracks to the east of the site but the train noise will not be detrimental to the use of the site.

2) What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site.

During permitted hours of work, noise will be created by grading and excavation equipment during development, and saws and hammers from carpenters when building homes. This additional noise will be temporary in nature.

There will be increased background noise from a future residential community by the increase in density. This is a by-product of GMA on a site designated for the increase in density by GMA.

3) Proposed measures to reduce or control noise impacts, if any:

Work will be performed during allowed hours of operation and equipment will have noise suppression equipment in good working order.

8. Land and shoreline use

a. What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.

The land is in the Area known as the Lakewood Neighborhood of the City of Marysville. The area is rapidly developing with retail, commercial, and high-density residential projects.

To the south is a mix of uses. There are some single family homes and some commercial uses including a small store and gas station. There is some office space with a couple of tenants. The adjacent land is zoned Mixed Use. Across

172nd is the Lakewood School Complex with the high school located directly south of the site.

To the west and across 11th Ave NE are rural residential uses outside the City. The same rural uses are to the north also. A new rural plat is in process on the adjacent property to the north.

To the east is vacant land zoned for Mixed Use and east of that land is Burlington Northern Railroad lines.

Any change has the perception of "impacts" by existing properties but adjacent property uses will not be affected; any existing uses and planned uses per current rules and regulations will not be impacted.

b. Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses as a result of the proposal, if any? If resource lands have not been designated, how many acres in farmland or forest land tax status will be converted to nonfarm or non-forest use?

Significant parts of the site have been farmed in the past and fields have been maintained in pasture grasses for hay or cover crops in recent years. The field provided some part-time farmer income but not enough to be self-supporting.

1) Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how:

No

c. Describe any structures on the site. http://sepaguidance.epermitting.org/DesktopModules/help.aspx?project=0&node=641

There are existing homes on the site per this proposal. One home will be saved but the other old house will be removed.

d. Will any structures be demolished? If so, what?

Yes, one old farmhouse built in 1912 will be removed

e. What is the current zoning classification of the site?

R-6.5 Multi-Family High

f. What is the current comprehensive plan designation of the site?

R-6.5 Multi-Family High

g. If applicable, what is the current shoreline master program designation of the site?

Not in a Shoreline Management Area

h. Has any part of the site been classified as a critical area by the city or county? If so, specify.

City of Marysville Critical Area mapping shows no streams or wetlands. Snohomish County shows some unverified wetlands suspected on the site from Remote Sensing. On the ground evaluations by Critical Area Consultant has found one small onsite wetland and an offsite wetland that has a buffer extending onto this site.

i. Approximately how many people would reside or work in the completed project?

Theoretical average would be 510 people based on SEPA average of 2.8 residents per home.

j. Approximately how many people would the completed project displace?

None

k. Proposed measures to avoid or reduce displacement impacts, if any:

NA

l. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:

This development consistent with the zoning and comprehensive plan for the area.

m. Proposed measures to ensure the proposal is compatible with nearby agricultural and forest lands of long-term commercial significance, if any:

NA

9. HOUSING

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

182 middle income single family detached homes.

c. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

One old house built in 1912 will be replaced, the second house on the site will remain.

d. Proposed measures to reduce or control housing impacts, if any:

NA—this project is adding supply of housing to a poorly supplied industry.

10. AESTHETICS

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

Thirty feet

b. What views in the immediate vicinity would be altered or obstructed?

Instead of pasture and woods there will be streets and single family homes.

c. Proposed measures to reduce or control aesthetic impacts, if any:

Providing a 10-foot landscape buffer and/or 6' fence around the perimeter of the site to screen views from offsite.

11. LIGHT AND GLARE

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

There may be some instantaneous glare come from chrome, glass, or mirrors on the trucks, equipment, and cars as they are moved around the site.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

No

c. What existing off-site sources of light or glare may affect your proposal?

None that will seriously impact the site.

d. Proposed measures to reduce or control light and glare impacts, if any:

None needed

12. RECREATION

a. What designated and informal recreational opportunities are in the immediate vicinity?

To the south across 172nd St NE is Lakewood High School which does have an interlocal agreement with Snohomish County Parks for after school hours use of fields for baseball, softball, soccer, football, tennis etc.

b. Would the proposed project displace any existing recreational uses? If so, describe.

No

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

The project will provide a little over five acres of active and passive recreation area.

13. HISTORIC and CULTURAL PRESERVATION

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers located on or near the site? If so, specifically describe.

No historic structures are shown onsite or nearby on the Washington State DAHP website.

b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

None known and none discovered on nearby projects.

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

Consulted Washington State DAHP WISSARD. There is a moderate risk of encountering archaeological findings. Checked with landowners who have lived at the site for 60 plus years to see if they ever heard of any findings of archeological evidence.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

If there should be anything found, work to stop and local tribes to be notified.

14. TRANSPORTATION

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

172nd St NE is the existing Public Road that will be the Primary Access serving this site. 11th Ave NE which intersects with 172nd at the SW corner of this site is a dead street that is adjacent to the western property line; there are two roads proposed to intersect with 11th.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

Public Transit does provide service along 172nd St NE. There is a westbound Bus Stop at 172nd and 11th Ave NE , an eastbound stop at 172nd just east of 11th Ave NE, westbound at 172nd St NE & 19th Dr NE and eastbound at 172nd St NE & 16th Dr NE.

c. How many additional parking spaces would the completed project or non-project proposal have? How many would the project or proposal eliminate?

Minimum new spaces will be 546 with none eliminated.

d. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

There will be frontage improvements on 11th Ave NE along the entire length of the west property line. There will be some improvements along a short portion of 172nd where this project has frontage. New Public Roads will be constructed internal to the project.

e. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

Burlington Northern Railroad tracks are to the east of the project, however, there are no stations in the immediate vicinity.

f. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and non-passenger vehicles). What data or transportation models were used to make these estimates?

The 182 homes would generate about 1762 Average Daily Trips with 184 Peak hour Trips. Exact Peak Hour not known but likely about 5 PM. See provided traffic report.

g. Will the proposal interfere with, affect or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.

No

h. Proposed measures to reduce or control transportation impacts, if any:

Pay Mitigation Fees.

15. PUBLIC SERVICES

a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.

Only GMA planned increases in Public Services will result from this proposal. When projects are built per Comprehensive Plans and Zoning, jurisdictions are required by GMA to plan for planned increases in Public Services. This project will not result in increased services outside what should have already been planned for.

b. Proposed measures to reduce or control direct impacts on public services, if any.

None Needed, project is per zoning and comprehensive plan and impacts, per GMA, are to be planned for by the local jurisdictions

16. UTILITIES

a. ***Bold/Italicize*** utilities currently available at the site:

Electricity
natural gas
water
refuse service
telephone
sanitary sewer
septic system
other _____

b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

City of Marysville Sewer Extension is in the works as a separate project. City of Marysville Water will be extended from 172nd into the site and will loop back into the main on 172nd.

All other utilities will be extended into the site from 172nd. The Utilities needed for the project will be provided by:

Snohomish County PUD Power
Wave Cable
Ziply Fiber Phone
Marysville Sanitary Sewer and Water

C. SIGNATURE

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

RE: Lakewood Heights PRD – Critical Area Report
City of Marysville, Washington
SWC Job #23-170

This report describes our observations of any jurisdictional wetlands, streams or buffers on or within 200' of Parcel #31051900400900 and a portion of #31051900401100 located at 1125 & 1507 172nd Street NE in the City of Marysville, Washington (the "site").

Above: Vicinity Map

The 29.76 acre site is located in the SE ¼ of Section 29, Township 31 North, Range 5 east of the W.WM.

The site is an irregular shaped and contains active agricultural fields as well as several single family homes, barns, several small outbuildings and associated gravel driveways and landscaped area. Some disturbed douglas fir dominated forest is also present on the site containing an informal atv type road track throughout.

Above: Snohomish County Parcel Map of the site.

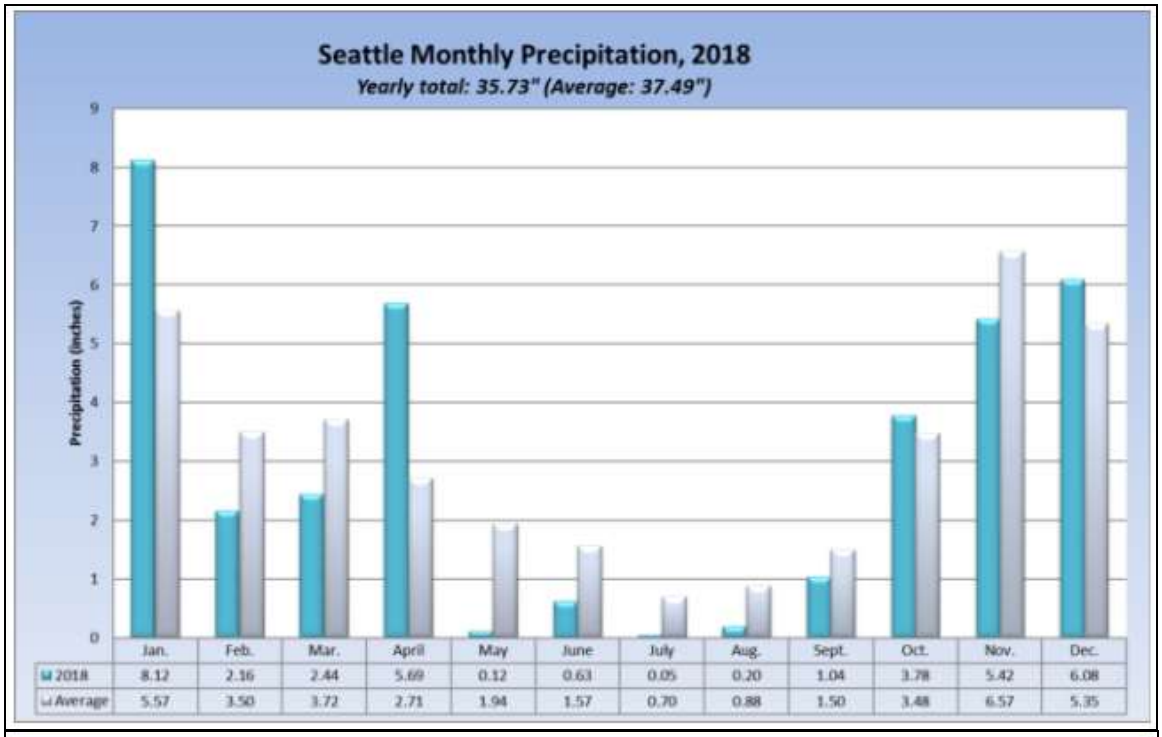
METHODOLOGY

Ed Sewall of Sewall Wetland Consulting, Inc. inspected the site between February and May 30 of 2019 and on July 28, 2021. The site had also been reviewed in the past prior to incorporation into Marysville in 2005. The site was reviewed again on October 25,2023 and all conditions remained the same as previous site visits.

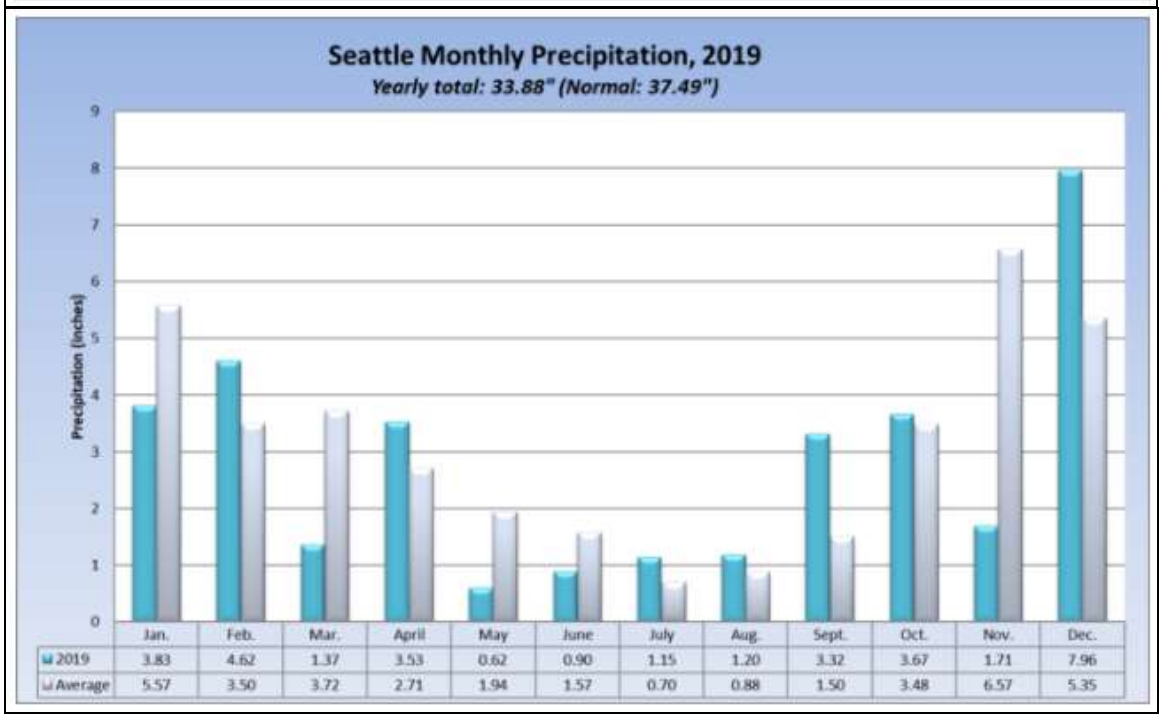
The site was reviewed using methodology described in the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory, 1987), and the *Western Mountains, Valleys and Coast region Supplement* (Version 2.0) dated June 24, 2010, as required by the US Army Corps of Engineers.

Given the agricultural use and existing drainage modifications that exists (drainage ditches tiles ect) in the western side of the site where inventoried wetlands were mapped, hydrology monitoring in the early growing season was used to verify if wetland hydrology exists on this agricultural field.

The presence of wetland hydrology is the driving force behind wetland presence, without wetland hydrology, an area does not meet wetland criteria. Therefore, only areas on the site that contain all three parameters during the early growing season meet the definition of a wetland. Areas that do not have hydrology do not meet wetland criteria and are considered upland.



Site Hydrology Monitoring Methods



A total of 16 data points (soil pits) were sampled to determine if wetland vegetation, soils and hydrology was present on the site within 12” of the soil surface.

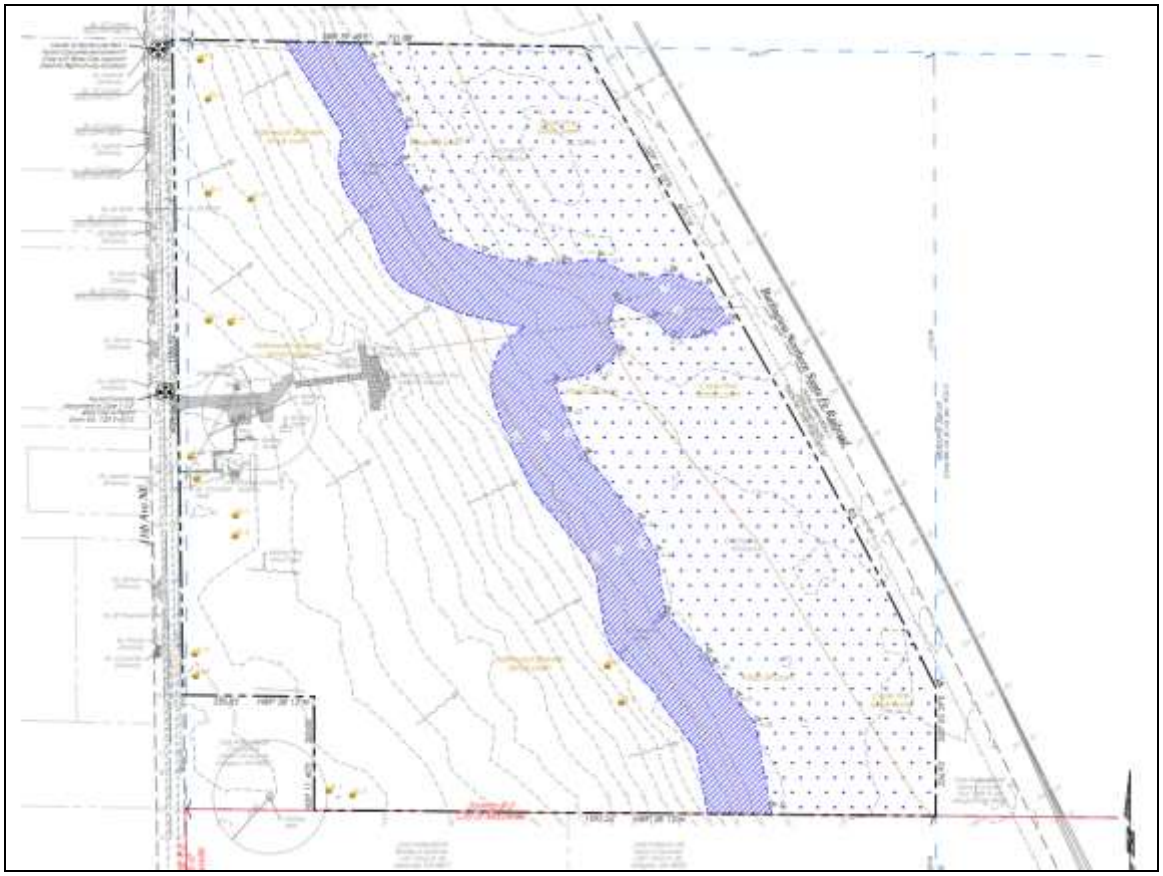
Above: Data point locations on the site

The site was visited between February 28th and May 25 of 2019 to collect hydrology data. Site visits were also conducted in April and July of 2021 to confirm nothing had changed since the 2019 hydrology monitoring.

Rainfall in the region for the water year through the growing season starting in October 2018 and ending in May 2019 was 29.29", which was 90% of a normal rainfall of 32.84". However, this small amount of

difference was not enough to invalidate our hydrology monitoring results, and given the drier years we have been having over the last decade, may be closer to normal at this point in time.

At each data point soil pit was excavated -18" deep. At each pit observations of the level of standing water and/or soil saturation (if any) were recorded through the monitoring period. Only the data point within Wetland A was found to contain wetland hydrology long enough to be called a wetland.



OBSERVATIONS

Existing Site Documentation.

Prior to visiting the site, a review of several natural resource inventory maps was conducted. Resources reviewed included previous studies of the site in 2005 as well as a study of the site to the north of the eastern side of the site, the City of Marysville Critical Areas map, National Wetland Inventory Map, the NRCS Soil Survey online mapping and Data, WADNR Fpars stream mapping and the WDFW Priority Habitats mapping website.

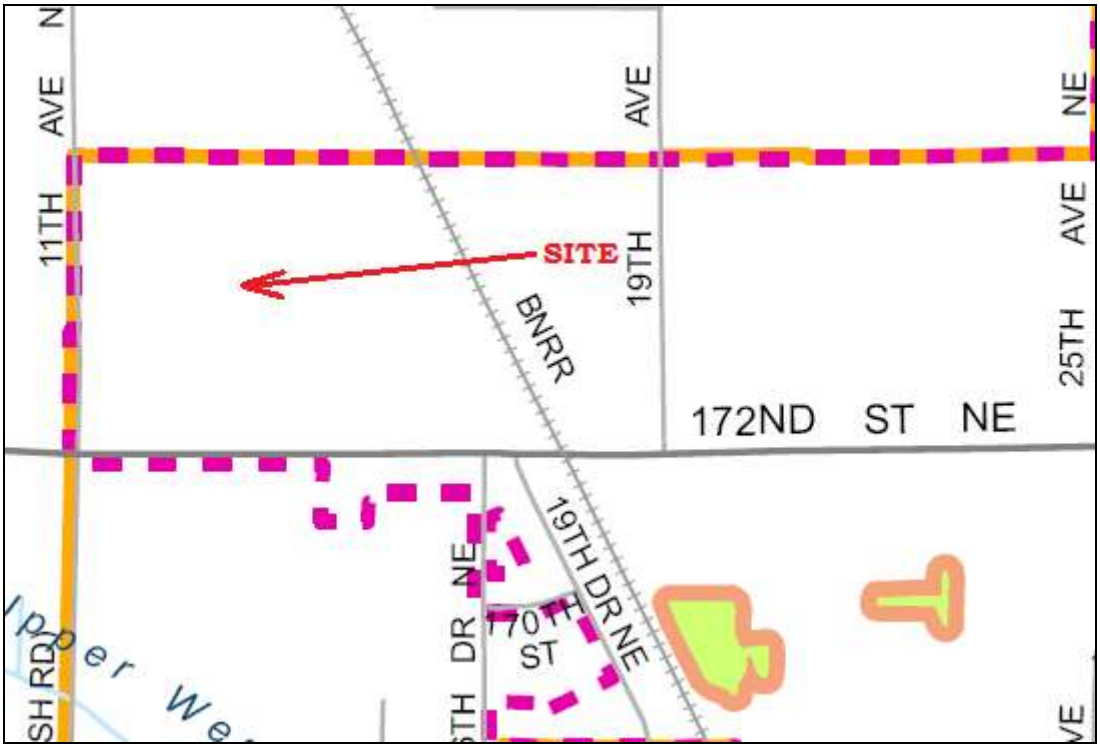
Centered Ventures Study of Parcel#31051900401600

Sewall wetland Consulting conducted a study of Parcel#31051900401600 in October of 2020. This parcel lies immediately north of the site in unincorporated Snohomish County. A single Category III wetland was identified on the eastern side of the site. The hydrology of this area was not confirmed at that time as it was conducted in the dry season.

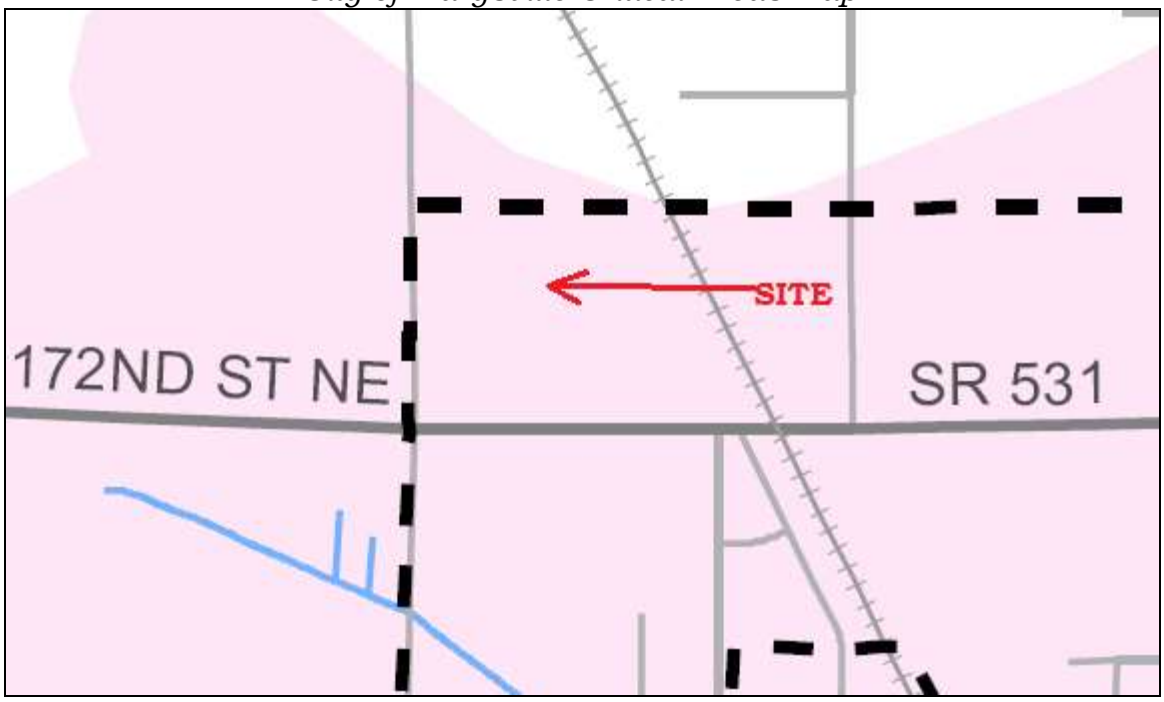
Above: Wetland Map of Category III wetland on Parcel#31051900401600 located immediately north of the site.

The pasture wetland ended at the site at an east-west ditch which drained towards the railroad tracks to the east. Again, wetland hydrology was not confirmed for this study and areas with wetland grasses and soils were assumed to be wetland.

Snohomish County Mapping



The Snohomish County PDS mapping of the site with wetland and stream layers activated depicts a large wetland to the east of the site in the area shown on the Centered Ventures site, as well as a wetland in the center of the western pasture.



Above: Snohomish County PDS wetland and stream mapping of the area of the site.

City of Marysville Critical Areas Map

According to the City of Marysville Critical Areas Maps, there are no wetlands or streams on the site

City of Marysville Critical Areas Map

Above: City of Marysville Stream mapping.

National Wetlands Inventory (NWI)

The NWI map depicts the same wetlands as shown on the Snohomish County PDS mapping, and in fact the County mapping is a carry-over from the NWI maps. These inventory maps were not field verified and are just an aerial photograph interpretation of the area.

Above: NWI Map of the area of the site.

Soil Survey

According to the NRCS Soil Mapper website, the majority of the site is mapped as moderately well-drained Alderwood gravelly sandy loam. The

eastern side of the site is mapped as Kitsap silt loam. Neither of these soils are considered hydric or wetland soils.

Above: NRCS Soil map of the study area.

WADNR Fpars

The WADNR Fpars stream typing map for the site there are no streams on or near the site.

Above WDNR Fpars Stream Typing map.

WDFW Priority Habitats

According to the WDFW Priority Habitats mapping website, there are no priority habitats on the site. The wetlands identified on the NWI maps have been replicated on this map as wetlands are considered priority habitats.

Above: WDFW Priority Habitats Map of the site

Field observations

Uplands

The site has a high point along the east edge and from there slopes off to the east and gently to the west and south. As previously described, several single family homes are found on the site with associated outbuildings and landscaped lawn areas and gravel driveways.

The eastern and northwest corner contain forested areas with numerous trails and dirt roads throughout. Douglas fir, red alder and big leaf maple make up the sparse overstory in these areas. An informal atv type track is located along the eastern portion of the site and this area is generally disturbed.

The western side of the site contains a large pasture area which is mowed for hay and a portion is used as a large garden area for the westernmost residence. Numerous drainage tiles were noted to be in place in this pasture as outfalls are present along ditches to the west and south of the site with tile outfalls.

The pasture contains a mix of pasture species including sweet vernal grass, orchard grass, reed canary grass and bent grass. Monitoring of data points throughout this pasture revealed none of the pasture meets the criteria of a wetland although some hydric soils and facultative grass species are present.

Soil pits excavated throughout the site were very mixed and varied, with loam in the western area of the site and some dense silty loam and sandy loam and loamy sand on the eastern side of the site. Soils were generally high chroma with colors of 10YR 3/3-3/4. Some areas in the pasture contained marginal hydric soils with B-horizon colors of 2.5Y 3/2 with few fine faint redoximorphic concentrations. However, hydrology monitoring of these areas revealed they do not contain wetland hydrology and were probably drained years ago by tile placement and ditching along the site perimeter.

One area along the northwest corner of the site was determined to meet wetland hydrology criteria. In addition, the buffer of the off-site wetland from the Category III wetland to the north encroaches onto the site. Below is a description of these areas;

Wetland A

A small forested wetland was identified and delineated on the northwest corner of the site with pink flags labeled A1-A12. This area is sparsely vegetated as there are trails through this area removing much of the understory. Small cedars and quaking aspens are present as well as some speedwell and creeping buttercup in the understory.

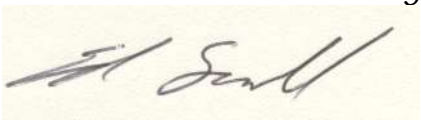
Soil pits excavated within the wetland revealed a gravelly loam with a color of 10YR 3/2 with common, medium distinct redoximorphic concentrations. Soils were saturated near the surface in our early growing season observations of this area.

This area would be classified as PFO4C (palustrine, forested needle leaved evergreen, seasonally flooded) using the US Fish and Wildlife wetland classification method (Cowardin et al 1979).

City of Marysville Code (MMC 22E.010.060 Wetland rating and classification) states: Wetlands shall be classified as Category I, II, III, or IV using the Washington State Department of Ecology's Wetland Rating System for Western Washington, Publication No. 04-06-025, or as amended hereafter. As a result the wetland area was rated using the 2014 Wetland Rating system.

Using the 2014 WADOE Wetland Rating system and rating the wetland as a depressional wetland, this wetland scored a total of 16 points with 4 for habitat.

Off-site wetland to north



As previously described, our study of the parcel to the north identified a category III wetland. This wetland was found to end at an agricultural ditch that is oriented in an east-west direction, draining to the east. The area to the south which is eats of the site is plowed agricultural field which does not contain any vegetation, nor was any wetland hydrology observed in this area.

The off-site wetland was never confirmed for wetland hydrology so its mapping may be conservative and larger than actually meets wetland criteria. However, we have no further data on this area so it is presumed to be wetland.

Using the 2014 WADOE Wetland Rating system and rating the off-site wetland as a depressional type wetland, the wetlands scored a total of 16 points with 5 for habitat. This indicates a Category III wetland. This indicates a Category III wetland. Category III wetlands in the City of Marysville have a 75' buffer measured from the wetland edge.

If you have any questions in regards to this report or need additional information, please feel free to contact me at (253) 859-0515 or at esewall@sewallwc.com .

Sincerely,
Sewall Wetland Consulting, Inc.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Surface Soil Cracks (B6)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)
- Water-Stained Leaves (B9) (except MLRA 1, 2, 4A, and 4B)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres along Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Stunted or Stressed Plants (D1) (LRR A)
- Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- Water-Stained Leaves (B9) (MLRA 1, 2, 4A, and 4B)
- Drainage Patterns (B10)
- Dry-Season Water Table (C2)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- Shallow Aquitard (D3)
- FAC-Neutral Test (D5)
- Raised Ant Mounds (D6) (LRR A)
- Frost-Heave Hummocks (D7)

Field Observations:

RATING SUMMARY – Western Washington

Name of wetland (or ID #): Wet A Gemmers Date of site visit: 3-7-14

Rated by Ed Sarff Trained by Ecology? Yes No Date of training

HGM Class used for rating Depressional Wetland has multiple HGM classes? Y N

NOTE: Form is not complete without the figures requested *(figures can be combined).*

Source of base aerial photo/map

OVERALL WETLAND CATEGORY III (based on functions / or special characteristics)

1. Category of wetland based on FUNCTIONS

_____ **Category I** – Total score = 23 - 27

_____ **Category II** – Total score = 20 - 22

/ **Category III** – Total score = 16 - 19

_____ **Category IV** – Total score = 9 - 15

FUNCTION	Improving Water Quality	Hydrologic	Habitat	
	Circle the appropriate ratings			
Site Potential	H (M) L	H M (L)	H M (L)	
Landscape Potential	H (M) L	H (M) L	H (M) L	
Value	(H) M L	H (M) L	H M (L)	TOTAL
Score Based on Ratings	7	5	4	16

Score for each function based on three ratings *(order of ratings is not important)*

9 = H,H,H
8 = H,H,M
7 = H,H,L
7 = H,M,M
6 = H,M,L
6 = M,M,M
5 = H,L,L
5 = M,M,L
4 = M,L,L
3 = L,L,L

2. Category based on SPECIAL CHARACTERISTICS of wetland

CHARACTERISTIC	CATEGORY
Estuarine	I II
Wetland of High Conservation Value	I
Bog	I
Mature Forest	I
Old Growth Forest	I
Coastal Lagoon	I II
Interdunal	I II III IV
None of the above	/

Wetland name or number A

Maps and figures required to answer questions correctly for Western Washington

Depressional Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	D 1.3, H 1.1, H 1.4	
Hydroperiods	D 1.4, H 1.2	
Location of outlet *(can be added to map of hydroperiods)*	D 1.1, D 4.1	
Boundary of area within 150 ft of the wetland *(can be added to another figure)*	D 2.2, D 5.2	
Map of the contributing basin	D 4.3, D 5.3	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	D 3.1, D 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	D 3.3	

Riverine Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Ponded depressions	R 1.1	
Boundary of area within 150 ft of the wetland *(can be added to another figure)*	R 2.4	
Plant cover of trees, shrubs, and herbaceous plants	R 1.2, R 4.2	
Width of unit vs. width of stream *(can be added to another figure)*	R 4.1	
Map of the contributing basin	R 2.2, R 2.3, R 5.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	R 3.1	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	R 3.2, R 3.3	

Lake Fringe Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	L 1.1, L 4.1, H 1.1, H 1.4	
Plant cover of trees, shrubs, and herbaceous plants	L 1.2	
Boundary of area within 150 ft of the wetland *(can be added to another figure)*	L 2.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	L 3.1, L 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	L 3.3	

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of **dense** trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of **dense, rigid** trees, shrubs, and herbaceous plants *(can be added to figure above)*	S 4.1	
Boundary of 150 ft buffer (can be added to another figure)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

Wetland name or number ____

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

NO – go to 2 **YES** – the wetland class is **Tidal Fringe** – go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

NO – Saltwater Tidal Fringe (Estuarine) **YES – Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

NO – go to 3 **YES** – The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?
   ___The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
   ___At least 30% of the open water area is deeper than 6.6 ft (2 m).

NO – go to 4 **YES** – The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?
   ___The wetland is on a slope (*slope can be very gradual*),
   ___The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks,
   ___The water leaves the wetland **without being impounded**.

NO – go to 5 **YES** – The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?
   ___The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
   ___The overbank flooding occurs at least once every 2 years.

Wetland name or number 1

NO – go to 6 **YES** – The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

NO – go to 7 **YES** – The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

NO – go to 8 **YES** – The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

Wetland name or number A

DEPRESSIONAL AND FLATS WETLANDS

Water Quality Functions - Indicators that the site functions to improve water quality

D 1.0. Does the site have the potential to improve water quality?

D 1.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	~~points = 1~~	2
Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic *(use NRCS definitions)*.	Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):		
Wetland has persistent, ungrazed, plants > 95% of area	points = 5	
Wetland has persistent, ungrazed, plants > ½ of area	points = 3	
Wetland has persistent, ungrazed plants > $^1/_{10}$ of area	points = 1	5
Wetland has persistent, ungrazed plants < $^1/_{10}$ of area	points = 0	
D 1.4. Characteristics of seasonal ponding or inundation:		
This is the area that is ponded for at least 2 months. See description in manual.		
Area seasonally ponded is > ½ total area of wetland	points = 4	
Area seasonally ponded is > ¼ total area of wetland	points = 2	
Area seasonally ponded is < ¼ total area of wetland	points = 0	2
Total for D 1	Add the points in the boxes above	9

Rating of Site Potential If score is: ___12-16 = H ✓ 6-11 = M ___0-5 = L *Record the rating on the first page*

D 2.0. Does the landscape have the potential to support the water quality function of the site?

D 2.1. Does the wetland unit receive stormwater discharges?	Yes = 1 No = 0	0
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?	Yes = 1 No = 0	1
D 2.3. Are there septic systems within 250 ft of the wetland?	Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1-D 2.3? Source_____	Yes = 1 No = 0	0
Total for D 2	Add the points in the boxes above	1

Rating of Landscape Potential If score is: ___3 or 4 = H ✓ 1 or 2 = M ___0 = L *Record the rating on the first page*

D 3.0. Is the water quality improvement provided by the site valuable to society?

D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?	Yes = 1 No = 0	1
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?	Yes = 2 No = 0	2
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality *(answer YES if there is a TMDL for the basin in which the unit is found)*?	Yes = 2 No = 0	2
Total for D 3	Add the points in the boxes above	5

Rating of Value If score is: ✓ 2-4 = H ___1 = M ___0 = L *Record the rating on the first page*

Wetland name or number A

DEPRESSIONAL AND FLATS WETLANDS

Hydrologic Functions - Indicators that the site functions to reduce flooding and stream degradation

D 4.0. Does the site have the potential to reduce flooding and erosion?

D 4.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression with no surface water leaving it (no outlet)	points = 4	
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet	points = 2	
Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch	points = 1	2
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 0	
D 4.2. Depth of storage during wet periods: *Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.*		
Marks of ponding are 3 ft or more above the surface or bottom of outlet	points = 7	
Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet	points = 5	
Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet	points = 3	
The wetland is a "headwater" wetland	points = 3	
Wetland is flat but has small depressions on the surface that trap water	points = 1	
Marks of ponding less than 0.5 ft (6 in)	points = 0	0
D 4.3. Contribution of the wetland to storage in the watershed: *Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.*		
The area of the basin is less than 10 times the area of the unit	points = 5	
The area of the basin is 10 to 100 times the area of the unit	points = 3	
The area of the basin is more than 100 times the area of the unit	~~points = 0~~	3
Entire wetland is in the Flats class	points = 5	
Total for D 4	Add the points in the boxes above	5

Rating of Site Potential If score is: ___12-16 = H ___6-11 = M ✓ 0-5 = L *Record the rating on the first page*

D 5.0. Does the landscape have the potential to support hydrologic functions of the site?

D 5.1. Does the wetland receive stormwater discharges?	Yes = 1 No = 0	0
D 5.2. Is >10% of the area within 150 ft of the wetland in land uses that generate excess runoff?	Yes = 1 No = 0	1
D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?	Yes = 1 No = 0	0
Total for D 5	Add the points in the boxes above	1

Rating of Landscape Potential If score is: ___3 = H ✓ 1 or 2 = M ___0 = L *Record the rating on the first page*

D 6.0. Are the hydrologic functions provided by the site valuable to society?

D 6.1. The unit is in a landscape that has flooding problems. *Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.*		
The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds):		
• Flooding occurs in a sub-basin that is immediately down-gradient of unit.	points = 2	
• Surface flooding problems are in a sub-basin farther down-gradient.	points = 1	
Flooding from groundwater is an issue in the sub-basin.	points = 1	
The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. *Explain why* _____	points = 0	1
There are no problems with flooding downstream of the wetland.	points = 0	
D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?	Yes = 2 No = 0	0
Total for D 6	Add the points in the boxes above	1

Rating of Value If score is: ✓ 2-4 = H ___1 = M ___0 = L *Record the rating on the first page*

Wetland name or number A

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class.* Check the Cowardin plant classes in the wetland. *Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

___ Aquatic bed	4 structures or more: points = 4	
___ Emergent	3 structures: points = 3	
___ Scrub-shrub (areas where shrubs have > 30% cover)	2 structures: points = 1	
___ Forested (areas where trees have > 30% cover)	1 structure: points = 0	0
If the unit has a Forested class, check if:		
___ The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon		

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

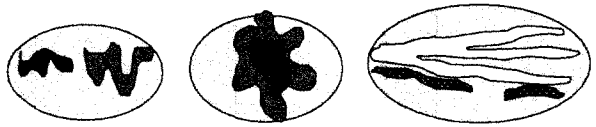
___ Permanently flooded or inundated	4 or more types present: points = 3	
___ Seasonally flooded or inundated	3 types present: points = 2	
___ Occasionally flooded or inundated	2 types present: points = 1	
___ Saturated only	1 type present: points = 0	0
___ Permanently flowing stream or river in, or adjacent to, the wetland		
___ Seasonally flowing stream in, or adjacent to, the wetland		
___ **Lake Fringe wetland**	**2 points**	
___ **Freshwater tidal wetland**	**2 points**	

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft^2.

Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. ***Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle***

If you counted: > 19 species	points = 2	
5 - 19 species	points = 1	1
< 5 species	points = 0	



H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points **Low** = 1 point **Moderate** = 2 points

All three diagrams in this row are **HIGH** = 3points

0

Wetland name or number A

H 1.5. Special habitat features:

Check the habitat features that are present in the wetland. *The number of checks is the number of points.*

- ___ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long).
- ___ Standing snags (dbh > 4 in) within the wetland
- ___ Undercut banks are present for at least 6.6 ft (2 m) **and/or** overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)
- ___ Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present *(cut shrubs or trees that have not yet weathered where wood is exposed)*
- ___ At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated *(structures for egg-laying by amphibians)*
- ___ Invasive plants cover less than 25% of the wetland area in every stratum of plants (*see H 1.1 for list of strata*)

1

Total for H 1 — Add the points in the boxes above: 2

Rating of Site Potential If score is: ___ **15-18 = H** ___ **7-14 = M** ___ **0-6 = L** *Record the rating on the first page*

H 2.0. Does the landscape have the potential to support the habitat functions of the site?

H 2.1. Accessible habitat (include *only habitat that directly abuts wetland unit*).

Calculate: / % undisturbed habitat 9 + [(% moderate and low intensity land uses)/2] 5 = 6 %

If total accessible habitat is:

> 1/3 (33.3%) of 1 km Polygon	points = 3
20-33% of 1 km Polygon	points = 2
10-19% of 1 km Polygon	points = 1
< 10% of 1 km Polygon	points = 0

0

H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.

Calculate: 20 % undisturbed habitat 60 + [(% moderate and low intensity land uses)/2] 30 = 45 %

Undisturbed habitat > 50% of Polygon	points = 3
Undisturbed habitat 10-50% and in 1-3 patches	points = 2
Undisturbed habitat 10-50% and > 3 patches	points = 1
Undisturbed habitat < 10% of 1 km Polygon	points = 0

2

H 2.3. Land use intensity in 1 km Polygon: If

> 50% of 1 km Polygon is high intensity land use	points = (- 2)
≤ 50% of 1 km Polygon is high intensity	points = 0

0

Total for H 2 — Add the points in the boxes above: 2

Rating of Landscape Potential If score is: ___ **4-6 = H** ___ **1-3 = M** ___ **< 1 = L** *Record the rating on the first page*

H 3.0. Is the habitat provided by the site valuable to society?

H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? *Choose only the highest score that applies to the wetland being rated.*

Site meets ANY of the following criteria: points = 2

- — It has 3 or more priority habitats within 100 m (see next page)
- — It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)
- — It is mapped as a location for an individual WDFW priority species
- — It is a Wetland of High Conservation Value as determined by the Department of Natural Resources
- — It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan

Site has 1 or 2 priority habitats (listed on next page) within 100 m: points = 1

Site does not meet any of the criteria above: points = 0

Rating of Value If score is: ___ **2 = H** ___ **1 = M** ___ **0 = L** *Record the rating on the first page*

Wetland name or number A

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp. http://wdfw.wa.gov/publications/00165/wdfw00165.pdf or access the list from here: http://wdfw.wa.gov/conservation/phs/list/)

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: ***NOTE:*** *This question is independent of the land use between the wetland unit and the priority habitat.*

— **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).

— **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).

— **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.

— **Old-growth/Mature forests:** Old-growth west of Cascade crest - Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests - Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.

— **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).

— **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.

— **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).

— **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.

— **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page).*

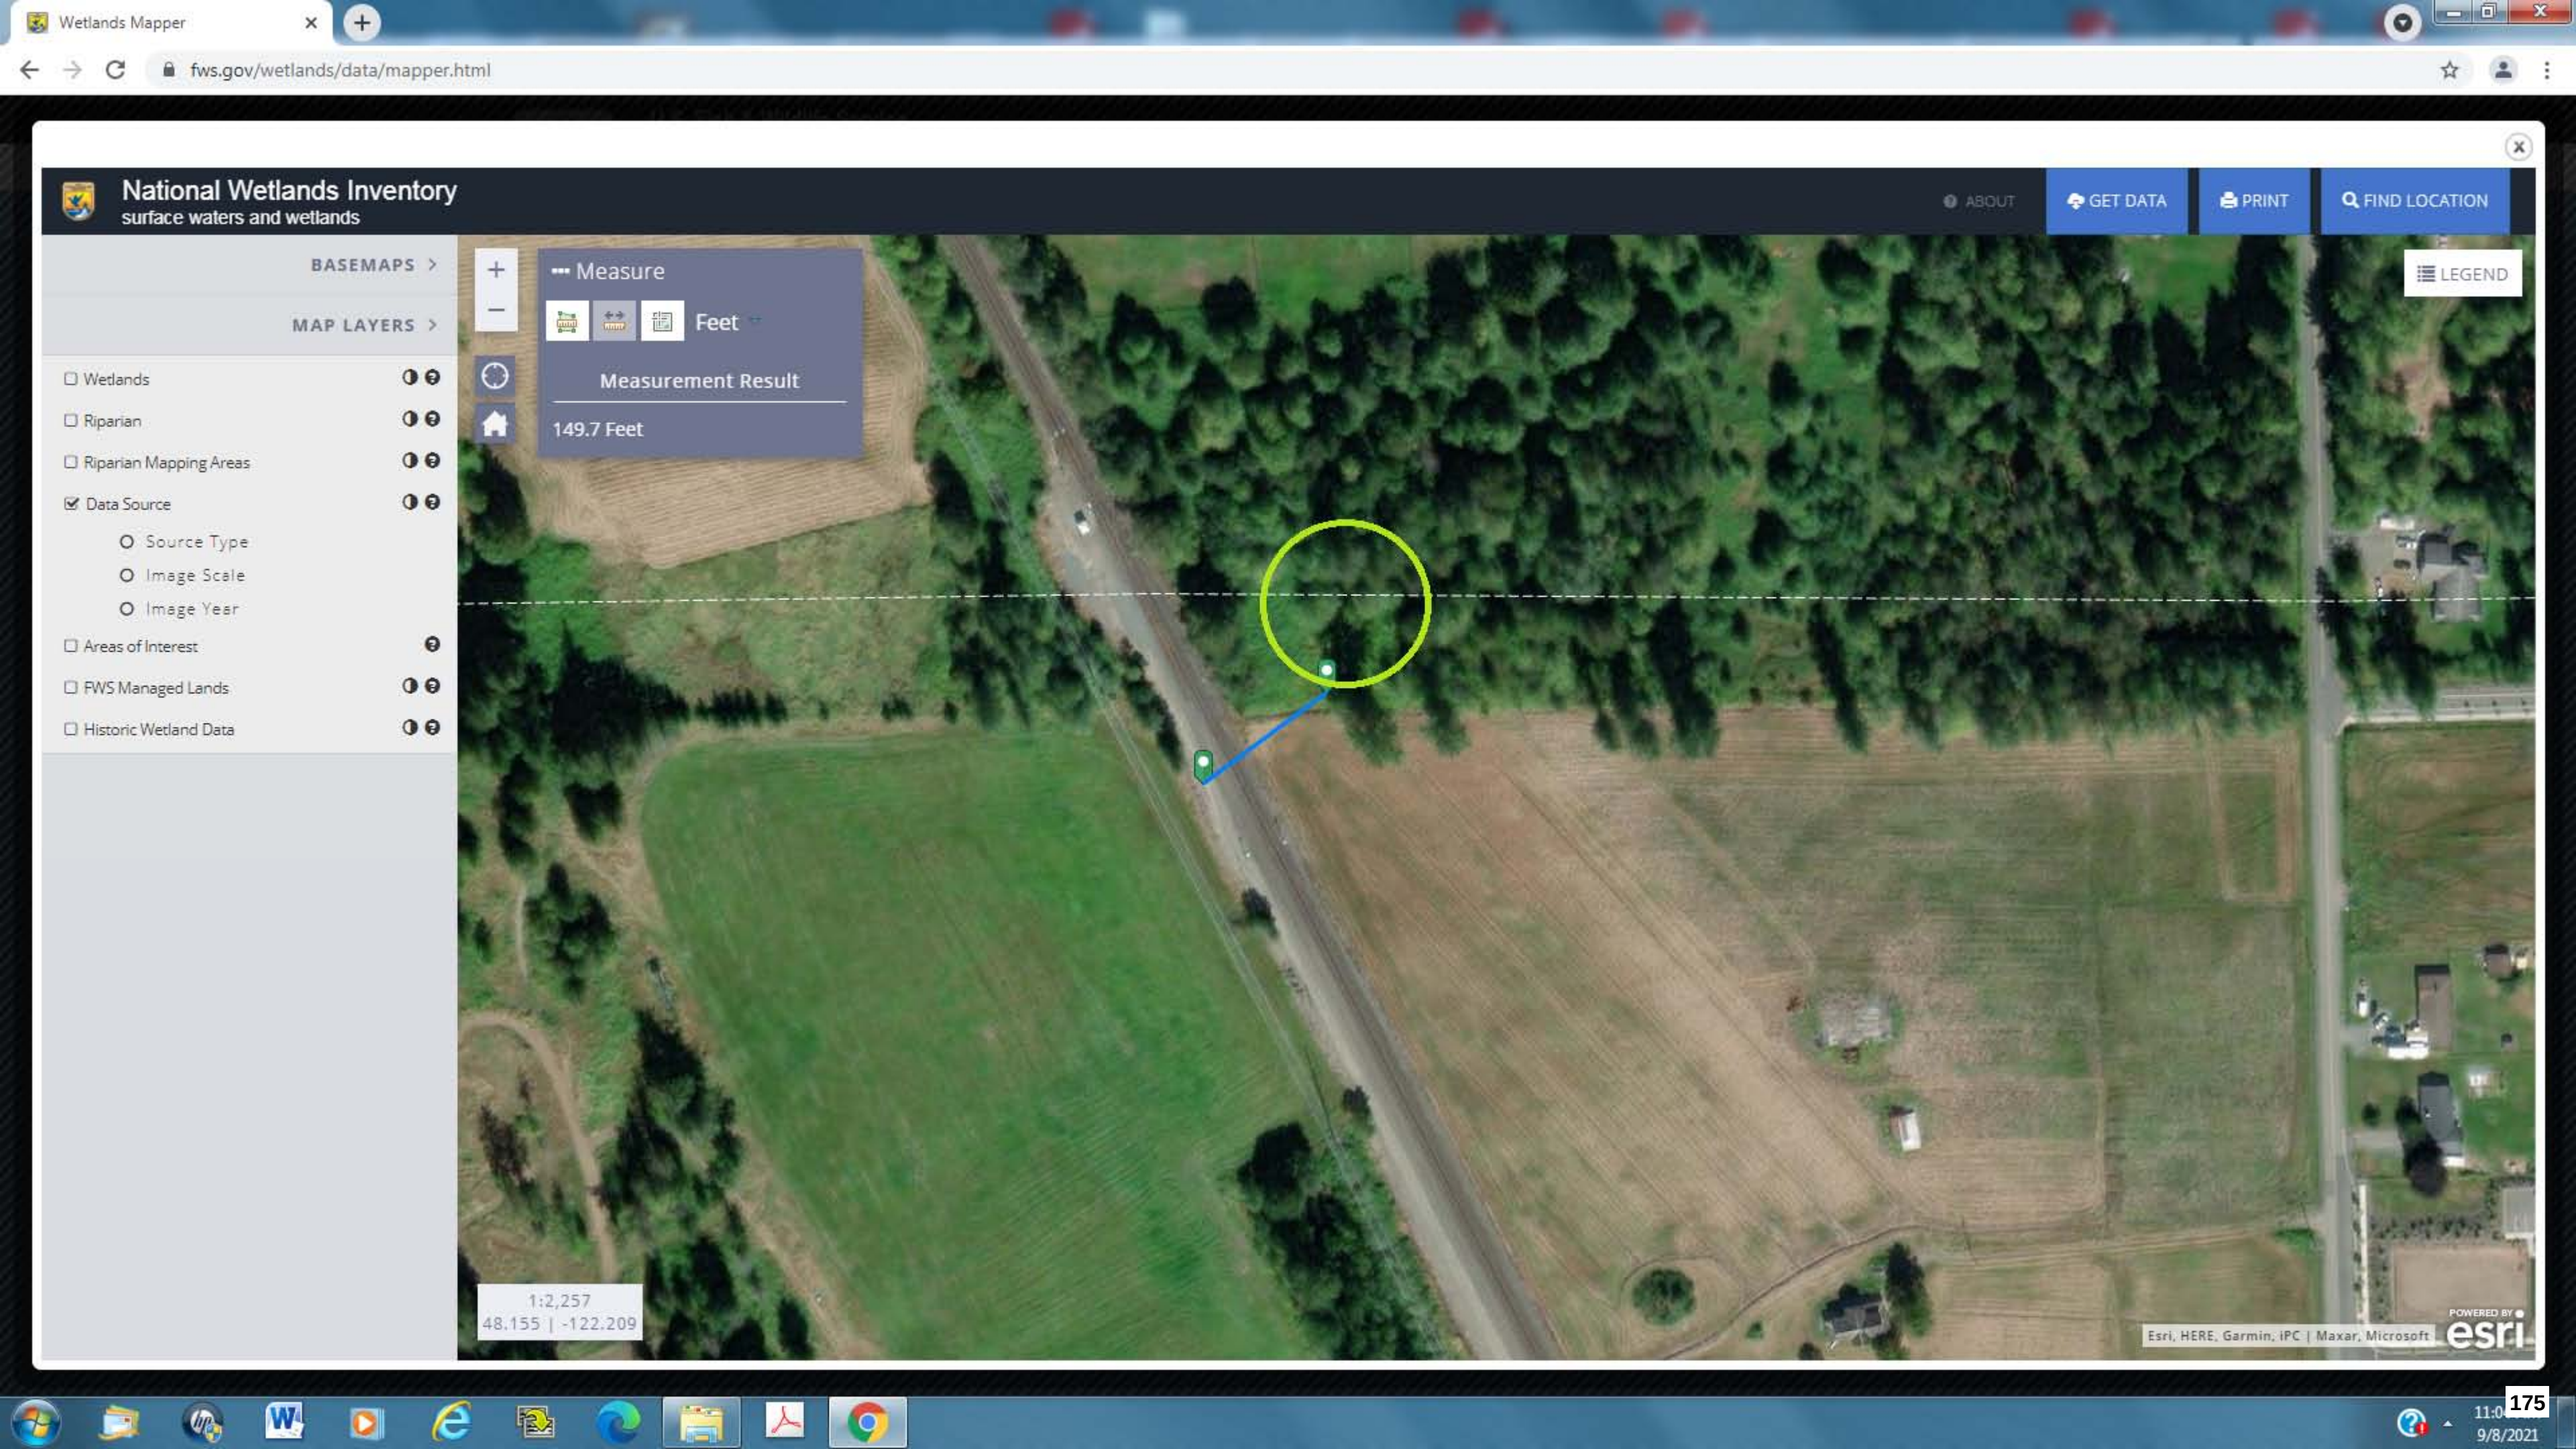
— **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.

— **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.

— **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.

— **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.



Wetland name or number A

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type *Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.*	**Category**
SC 1.0. Estuarine wetlands Does the wetland meet the following criteria for Estuarine wetlands? — The dominant water regime is tidal, — Vegetated, and — With a salinity greater than 0.5 ppt Yes –Go to **SC 1.1** No= **Not an estuarine wetland**	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? Yes = **Category I** No - Go to **SC 1.2**	**Cat. I**
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? — The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are *Spartina*, see page 25) — At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. — The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. Yes = **Category I** No = **Category II**	**Cat. I** **Cat. II**
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? Yes – Go to **SC 2.2** No – Go to **SC 2.3** SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? Yes = **Category I** No = **Not a WHCV** SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf Yes – **Contact WNHP/WDNR and go to SC 2.4** No = **Not a WHCV** SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? Yes = **Category I** No = **Not a WHCV**	**Cat. I**
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? *Use the key below. If you answer YES you will still need to rate the wetland based on its functions.* SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? Yes – Go to **SC 3.3** No – Go to **SC 3.2** SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? Yes – Go to **SC 3.3** No = **Is not a bog** SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? Yes = **Is a Category I bog** No – Go to **SC 3.4** **NOTE:** If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? Yes = **Is a Category I bog** No = **Is not a bog**	**Cat. I**

Wetland name or number A

SC 4.0. Forested Wetlands Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.*** — **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. — **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). Yes = **Category I** No = **Not a forested wetland for this section**	**Cat. I**
SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? — The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks — The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon *(needs to be measured near the bottom)* Yes – Go to **SC 5.1** No = **Not a wetland in a coastal lagoon**	**Cat. I**
SC 5.1. Does the wetland meet all of the following three conditions? — The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). — At least ⅓ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. — The wetland is larger than $^{1}/_{10}$ ac (4350 ft^2) Yes = **Category I** No = **Category II**	**Cat. II**
SC 6.0. Interdunal Wetlands Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.*** In practical terms that means the following geographic areas: — Long Beach Peninsula: Lands west of SR 103 — Grayland-Westport: Lands west of SR 105 — Ocean Shores-Copalis: Lands west of SR 115 and SR 109 Yes – Go to **SC 6.1** No = **not an interdunal wetland for rating**	**Cat I**
SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)? Yes = **Category I** No – Go to **SC 6.2**	**Cat. II**
SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger? Yes = **Category II** No – Go to **SC 6.3**	**Cat. III**
SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac? Yes = **Category III** No = **Category IV**	**Cat. IV**
Category of wetland based on Special Characteristics If you answered No for all types, enter "Not Applicable" on Summary Form	NA

0 40 80

SCALE IN FEET

1/1 **WETLAND BUFFER ENHANCEMENT SITE PLAN**

GENERAL NOTES:

1. WORK SHALL CONFORM TO ALL CITY OF MARYSVILLE CODES, ORDINANCES, AND REGULATIONS.
2. BEFORE THE START OF ANY WORK, A PRE-CONSTRUCTION MEETING MUST BE HELD BETWEEN CITY OF MARYSVILLE, THE OWNER, AND THE PLAN DESIGNER.
3. A COPY OF THESE APPROVED DRAWINGS MUST BE ON THE JOB SITE WHENEVER WORK IS IN PROGRESS.
4. SITE CONDITIONS MAY VARY BASED ON SEASON AND/OR TIME OF YEAR. ACCOMMODATE REALIZED AND ANTICIPATED SITE CONDITIONS WHEN COMPLETING THE WORK SHOWN ON THESE DRAWINGS.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING ADEQUATE SAFEGUARDS, SAFETY DEVICES, PROTECTIVE EQUIPMENT, FLAGGERS, AND ANY OTHER NEEDED ACTIONS TO PROTECT THE LIFE, HEALTH, AND SAFETY OF THE PUBLIC, AND TO PROTECT PROPERTY IN CONNECTION WITH THE PERFORMANCE OF THE WORK SHOWN ON THESE DRAWINGS. ANY WORK WITHIN THE TRAVELED RIGHT-OF-WAY THAT MAY INTERRUPT NORMAL TRAFFIC FLOW SHALL REQUIRE TRAFFIC CONTROL IN ACCORDANCE WITH ANY AND ALL CITY OF MARYSVILLE STANDARDS.

RECOMMENDED WORK SEQUENCE:

1. FLAG WORK AREA LIMITS.
2. REQUEST AND ATTEND A PRE-CONSTRUCTION MEETING WITH OWNER.
3. CONTROL NOXIOUS/NON-NATIVE WEEDS.
4. INSTALL NATIVE PLANTS.
5. PLACE MULCH AT THE BASE OF INSTALLED PLANTS.
6. IRRIGATE INSTALLED PLANTS (2 YEARS).
7. MAINTAIN AND MONITOR INSTALLED PLANTS (3 YEARS).

NOXIOUS WEED CONTROL:

PRIOR TO PLANT INSTALLATION, CONTROL NOXIOUS WEEDS WITHIN THE PLANTING AREA. TARGET NOXIOUS WEED SPECIES SHALL INCLUDE ALL CLASS "A", "B", AND "C" NOXIOUS WEEDS (INCLUDING NON-REGULATED "B" AND "C" NOXIOUS WEEDS AND "WEEDS OF CONCERN") IDENTIFIED ON THE LATEST SNOHOMISH COUNTY NOXIOUS WEED LIST. DURING NOXIOUS WEED CONTROL WORK, EXISTING NATIVE VEGETATION SHALL BE PROTECTED FROM DAMAGE. ALL NOXIOUS WEED CONTROL CUTTINGS AND DEBRIS SHALL BE REMOVED FROM THE SITE. ACCEPTABLE CONTROL METHODS INCLUDE THE FOLLOWING:

1. REDUCE TOP GROWTH OF NOXIOUS WEEDS. ACCEPTABLE METHODS INCLUDE: WALK BEHIND OR TRACTOR MOUNTED MOWER, EXCAVATOR WITH BUCKET AND THUMB, POWER SAW, BRUSH HOG, LINE TRIMMER, LOPPERS, CLIPPERS, HAND PULLING, OR APPROVED EQUAL.

2. GRUB OUT LARGE ROOT CROWNS AND MAJOR ROOTS BY HAND USING CLAW MATTOCK, PULASKI, OR APPROVED EQUAL.

PLANT INSTALLATION NOTES:

1. PLANT MATERIAL QUALITY AND LOCATIONS SHALL BE INSPECTED BY PLAN DESIGNER OR OWNER PRIOR TO INSTALLATION.
2. PLANTS SHALL BE DERIVED FROM STOCK ACCLIMATED TO WESTERN WASHINGTON ENVIRONMENTAL CONDITIONS.
3. PLANTS SHALL BE PROPAGATED FROM NATIVE STOCK. SALVAGED PLANTS MAY BE ACCEPTABLE SUBJECT TO OWNER APPROVAL.
4. PLANTS SHALL BE NORMAL IN PATTERN OF GROWTH, HEALTHY, WELL-BRANCHED AND HAVE ALL LEADERS AND BUDS INTACT. TREES SHALL NOT HAVE SUNSCALDS, DISFIGURING KNOTS, FRESH CUTS OF LIMBS, DAMAGED LEADERS, AND/OR DEFORMED TRUNKS.
5. CONTAINERIZED PLANT STOCK SHALL BE GROWN IN A CONTAINER LONG ENOUGH TO DEVELOP A ROOT SYSTEM THAT REACHES THE EDGES OF THE CONTAINER IN WHICH IT HAS GROWN. TREES AND SHRUBS SHALL BE WELL ROOTED AND SHALL HAVE SUFFICIENT ROOT MASS TO HOLD TOGETHER THE SOIL, IN WHICH PLANT IS GROWING, WHEN REMOVED FROM THE POT.

PLANT INSTALLATION SCHEDULE:

COMMON NAME	SCIENTIFIC NAME	SIZE/FORM	QTY.	SPACING
BIGLEAF MAPLE	*ACER MACROPHYLLUM*	2 GAL CONT.	75	9 FT ON-CENTER
BITTER CHERRY	*PRUNUS EMARGINATA*	2 GAL CONT.	50	9 FT ON-CENTER
DOUGLAS-FIR	*PSEUDOTSUGA MENZIESII*	2 GAL CONT.	125	9 FT ON-CENTER
VINE MAPLE	*ACER CIRCINATUM*	2 GAL CONT.	95	5 FT ON-CENTER
INDIAN PLUM	*OEMLERIA CERASFORMIS*	2 GAL CONT.	110	5 FT ON-CENTER
THIMBLEBERRY	*RUBUS PARVIFLORUS*	2 GAL CONT.	140	5 FT ON-CENTER
SALMONBERRY	*RUBUS SPECTABILIS*	2 GAL CONT.	125	5 FT ON-CENTER
BALDHIP ROSE	*ROSA GYMNOCARPA*	2 GAL CONT.	163	5 FT ON-CENTER
COMMON SNOWBERRY	*SYMPHORICARPUS ALBUS*	2 GAL CONT.	175	5 FT ON-CENTER

MULCH SPECIFICATION:

MULCH SHALL BE COMMERCIALLY AVAILABLE "MEDIUM MULCH" (WWW.PACIFICTOPSOILS.COM; 425-337-2700), ARBORIST CHIPS, OR APPROVED EQUAL. MULCH SHALL NOT CONTAIN RESIN, TANNIN, OR OTHER COMPOUNDS IN QUANTITIES THAT WOULD BE DETRIMENTAL TO PLANT LIFE. MULCH SHALL NOT BE DERIVED FROM STUMP GRINDINGS AND SHALL NOT CONTAIN SOIL. HOG FUEL OR EQUAL IS NOT ACCEPTABLE. SUBJECT TO REVIEW BY THE PLAN DESIGNER, LOCAL ARBORIST AND/OR COMMERCIAL TREE TRIMMING COMPANIES MAY BE ALTERNATIVE ACCEPTABLE MATERIAL SOURCES.

TEMPORARY IRRIGATION:

TEMPORARY IRRIGATION SHALL BE PROVIDED FOR TWO (2) GROWING SEASONS FOLLOWING PLANT INSTALLATION. IRRIGATION SHALL PROVIDE A MINIMUM RAINFALL EQUIVALENT OF 1 INCH PER WEEK FROM JUNE 15 THROUGH SEPTEMBER 15. IRRIGATION SHALL BE APPLIED IN A MANNER THAT MAINTAINS PLANT HEALTH, PREVENTS WILTING, AND PROMOTES DEEP PLANT ROOT SYSTEMS.

GOALS, OBJECTIVES, AND PERFORMANCE STANDARDS:

ENHANCEMENT PLAN GOALS, MONITORING SCHEDULE, AND PERFORMANCE STANDARDS ARE OUTLINED BELOW. THE GOALS OF THIS PLAN ARE CONSIDERED ACHIEVED WHEN THE PERFORMANCE STANDARDS ARE SATISFIED.

GOAL - ENHANCE WETLAND BUFFER PER CITY OF MARYSVILLE STANDARDS

OBJECTIVE - INSTALL DENSE NATIVE PLANTINGS WITHIN THE BUFFER AREA SHOWN ON THIS DRAWING.

PERFORMANCE STANDARD -

YEAR 1 - 100% SURVIVAL

YEAR 2 THROUGH YEAR 3 - 80% SURVIVAL

THIS STANDARD CAN BE ACHIEVED THROUGH PLANT ESTABLISHMENT OR THROUGH PLANT REPLACEMENT.

MONITORING PLAN (3 GROWING SEASONS):

THE MONITORING PLAN OUTLINED BELOW WILL ENSURE THAT THE PERFORMANCE STANDARDS ESTABLISHED FOR THIS PLAN HAVE BEEN MET.

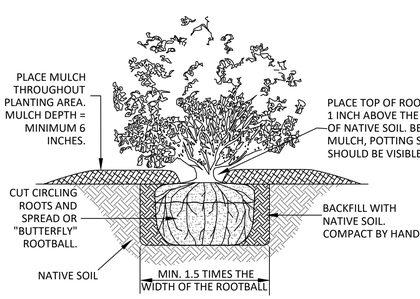
MONITORING SCHEDULE

1. AT THE TIME OF CONSTRUCTION (AS-BUILT)
2. THIRTY DAYS AFTER PLANTING
3. EARLY IN THE GROWING SEASON OF THE FIRST YEAR (YEAR 1)
4. END OF THE GROWING SEASON OF THE FIRST YEAR (YEAR 1)
5. TWICE THE SECOND GROWING SEASON (YEAR 2)
6. ONCE DURING THE THIRD GROWING SEASON (YEAR 3)

AS-BUILT

FOLLOWING COMPLETION OF THE WORK SHOWN ON THIS PLAN, A QUALIFIED PROFESSIONAL SHALL PREPARE AN AS-BUILT OF THE COMPLETED WORK. THE AS-BUILT SHALL SUMMARIZE THE COMPLETED WORK AS WELL AS ANY DEVIATIONS FROM THE APPROVED VERSION OF THIS PLAN. THE AS-BUILT SHALL BE SUBMITTED TO THE CITY OF MARYSVILLE NO LATER THAN 30 DAYS FROM THE DATE THAT THE WORK SHOWN ON THIS PLAN HAS BEEN COMPLETED.

MONITORING (3 GROWING SEASONS)



ANNUAL MONITORING SHALL BE COMPLETED FOR A PERIOD OF THREE GROWING SEASONS. UNLESS OTHERWISE ALLOWED BY THE CITY OF MARYSVILLE, ANNUAL MONITORING SHALL BE COMPLETED BY A QUALIFIED PROFESSIONAL AND SHALL COMPRISE A SITE INVESTIGATION AND REPORTING TO THE CITY OF MARYSVILLE. THE PURPOSE OF THE SITE INVESTIGATION IS TO EVALUATE CONDITIONS WITHIN THE PLANTING AREAS PER THE CURRENT YEAR'S PERFORMANCE STANDARDS. A DIRECT COUNT INVENTORY AND ASSESSMENT OF ALL INSTALLED PLANTS SHALL BE USED TO EVALUATE PERCENT SURVIVAL. THE RATIONALE FOR POOR CONDITIONS, IF PRESENT, WILL BE DETERMINED TO THE EXTENT FEASIBLE. IN ADDITION, PHOTOGRAPHS SHALL BE TAKEN FROM THE PERMANENT PHOTO POINTS. THE RESULTS OF EACH MONITORING ASSESSMENT SHALL BE SUMMARIZED IN A WRITTEN REPORT AND SUBMITTED TO THE CITY OF MARYSVILLE NO LATER THAN 30 DAYS FOLLOWING EACH SITE INVESTIGATION.

MAINTENANCE PLAN:

INSTALLED PLANTS SHALL BE MAINTAINED AT REGULAR INTERVALS DURING THE MONITORING PERIOD TO PROMOTE THE SUCCESSFUL ESTABLISHMENT AND VIGOROUS GROWTH. GENERAL MAINTENANCE SHALL INCLUDE: 1) RE-APPLYING BARK MULCH TO MAINTAIN A 6" MINIMUM APPLIED THICKNESS - GROWING SEASON 1 ONLY; 2) THE PRUNING OF INSTALLED PLANTS TO REMOVE DEAD WOOD AND PROMOTE VIGOROUS PLANT GROWTH AND PROPER FOR; 3) THE REPLACEMENT OF DEAD, DISTRESS AND/OR DISEASED PLANTS; 4) THE REMOVAL OF UNDESIRABLE VEGETATION; 5) THE REMOVAL OF TRASH, LITTER, AND/OR OTHER NON-DECOMPOSING DEBRIS; 6) REPAIR DAMAGES CAUSED BY EROSION, SETTLING, AND/OR OTHER GEOMORPHIC PROCESSES. GENERAL MAINTENANCE WORK SHALL OCCUR MONTHLY DURING THE GROWING SEASON AND/OR AT A FREQUENCY OTHERWISE NECESSARY TO ENSURE THE SUCCESSFUL ESTABLISHMENT AND VIGOROUS GROWTH OF THE INSTALLED PLANTS.

CONTINGENCY PLAN:

SHOULD ANY MONITORING ASSESSMENT REVEAL THAT THE PERFORMANCE STANDARDS FOR THE RESPECTIVE YEAR ARE NOT SATISFIED, THE PERMITTEE SHALL WORK WITH THE CITY OF MARYSVILLE TO DEVELOP A CONTINGENCY PLAN TO ADDRESS THE DEFICIENCY(IES). CONTINGENCY PLANS CAN INCLUDE, BUT ARE NOT LIMITED TO, THE FOLLOWING ACTIONS: 1) ADDITIONAL PLANT INSTALLATION; 2)EROSION CONTROL; 3) HERBIVORY PROTECTION; 4) MODIFICATION TO THE IRRIGATION REGIME; AND/OR 5) PLANT SUBSTITUTIONS OF TYPE, SIZE, QUANTITY, AND LOCATION. SUCH CONTINGENCY PLAN SHALL BE SUBMITTED TO THE CITY OF MARYSVILLE WITHIN 30 DAYS OF WHEN DEFICIENCIES ARE DISCOVERED. UNLESS OTHERWISE APPROVED BY THE CITY OF MARYSVILLE, ACTIONS SPECIFIED ON AN APPROVED CONTINGENCY PLAN MUST BE COMPLETED WITHIN 60 DAYS. IF THE FAILURE IS SUBSTANTIAL, THE CITY OF MARYSVILLE MAY EXTEND THE COMPLIANCE MONITORING PERIOD FOR THE ENHANCEMENT WORK.

INTRODUCTION

This document provides the Intersection Control Evaluation (ICE) completed for the intersection of 172nd Street NE (State Route (SR) 531) and 11th Ave NE in Marysville, WA. The analysis was completed to evaluate intersection improvements as a result of the proposed *Gemmer Residential* development within the City of Marysville jurisdiction.

The *Gemmer Residential* project is located in the Lakewood area of the City of Marysville, WA as shown in Figure 1 site vicinity map. The proposed project will include up to 185 Single-Family Detached homes. The site includes one (1) existing Single-Family Detached home that would be removed with the proposed project. Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE (SR 531) via an existing gas station access located southeast of the site. A preliminary site plan is included in Appendix A.

Based on discussions with City of Marysville and WSDOT, three (3) potential intersection control alternatives were identified at the 172nd Street NE (SR 531)/11th Ave NE intersection consistent with criteria established in the WSDOT *Design Manual* section 1300.05(3). Of the three (3) intersection control alternatives identified, one (1) alternative was evaluated as a potential intersection control alternative at the 172nd Street NE (SR 531)/11th Ave NE intersection.

STEP 1: BACKGROUND AND PROJECT NEEDS

This document provides the Intersection Control Evaluation (ICE) completed for the intersection of 172nd Street NE (SR 531)/11th Ave NE located in the City of Marysville. The analysis was completed to evaluate potential improvements at the intersection. Three (3) potential intersection control alternatives were identified and evaluated consistent with criteria established in the WSDOT *Design Manual* section 1300.05(1) for an ICE. The analysis presented in this ICE is based on the *Gemmer Residential Traffic Impact Analysis* (TENW, November 2023), included in Appendix B. Step 1 of this evaluation includes documentation of existing conditions, establishes the various performance metrics and targets, and identifies the intersection control alternative(s) that were considered.

Existing Roadway

The intersection of 172nd Street NE (SR 531)/NE 11th Ave is an existing four leg intersection with 172nd Street NE (SR 531) running in the east/west direction and 11th Ave NE running in the north/south direction. The intersection is currently two-way stop-controlled with 172nd Street NE (SR 531) free flow. Existing channelization at the intersection includes single-lane southbound and northbound approaches, a shared eastbound left-through-right lane, a westbound left-turn lane, and a shared westbound through-right lane. Near the 172nd Street NE (SR 531)/11th Ave NE intersection, 172nd Street NE (SR 531) generally includes one (1) travel lane in each direction with a posted speed limit of 35 mph east of the intersection and 25 mph west of the intersection. 11th Ave NE consists of one (1) travel lane in each direction with a posted speed limit of 25 mph. 172nd Street NE (SR 531) is classified by WSDOT as a Major Collector in the project vicinity. 11th Ave NE is classified by the City of Marysville as a local street.

According to WSDOT, average annual daily traffic (AADT) on 172nd Street NE (SR 531) at 11th Ave NE is approximately 13,000 vehicles per day based on counts collected in 2022. The City of Marysville and WSDOT LOS standard at intersections is LOS D with one exception. The City of Marysville Traffic Impact Analysis Guidelines state that intersections on the 172nd Street NE (SR 531) corridor which have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E.

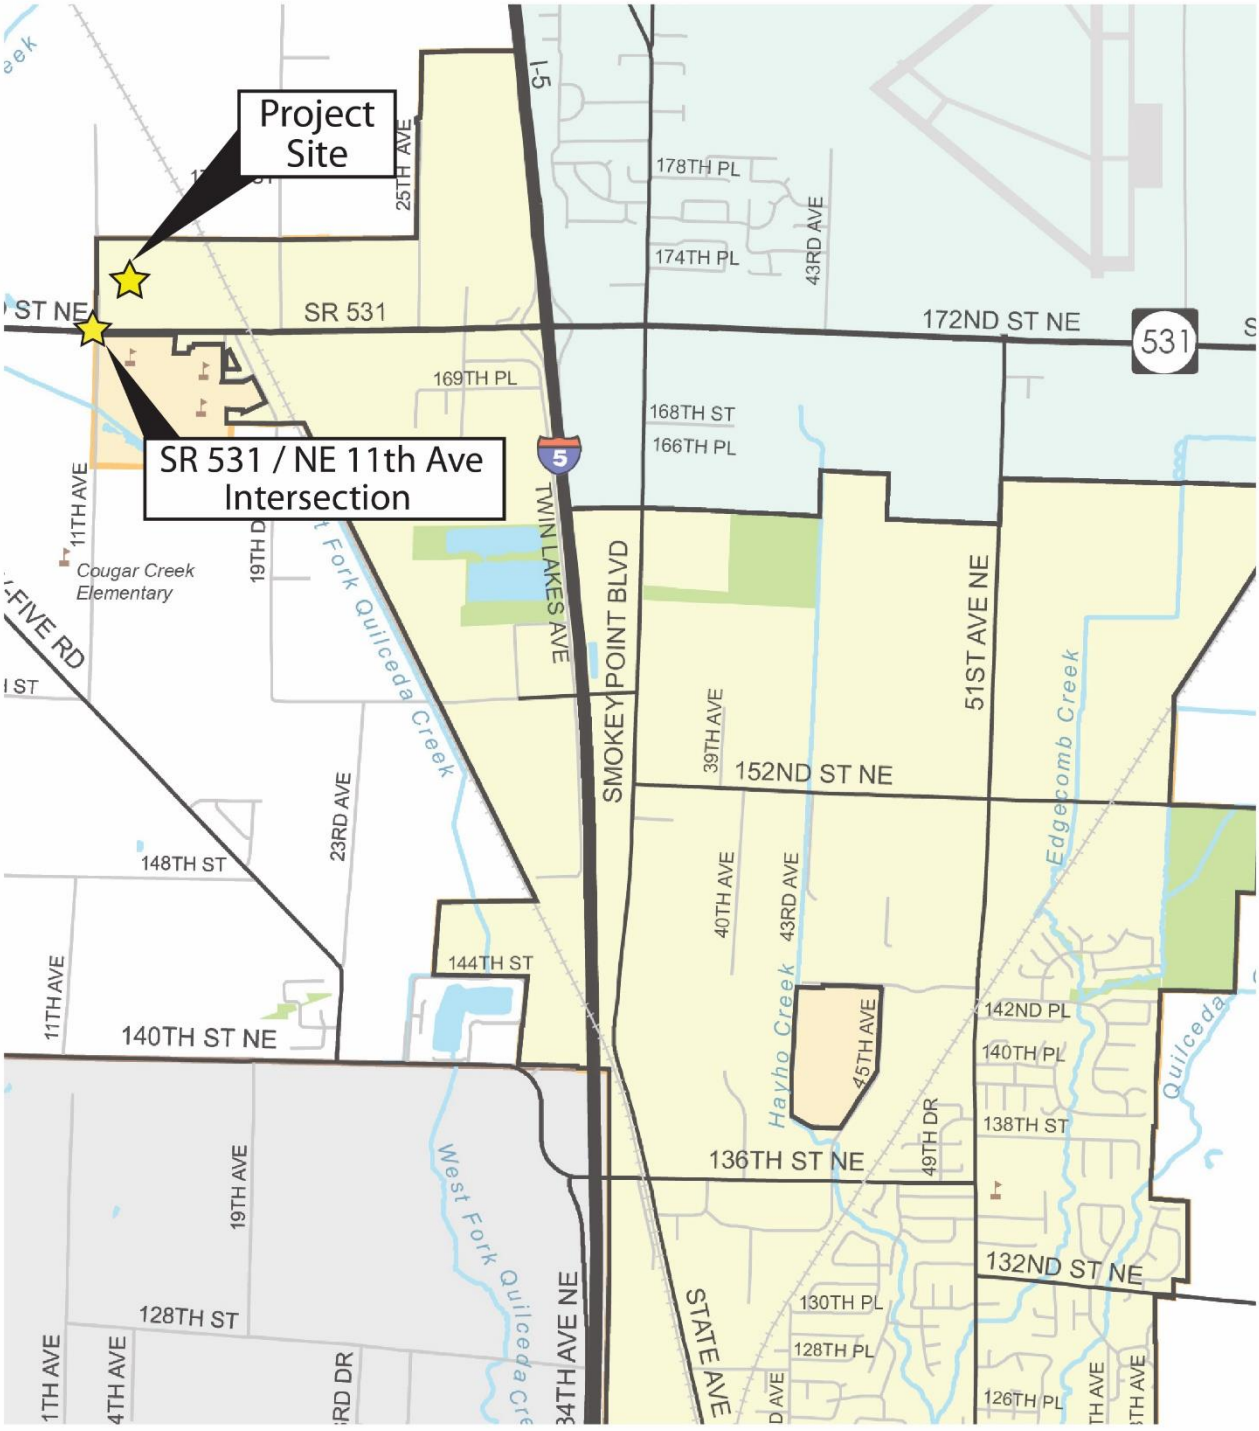

Figure 1: Project Site Vicinity

Existing Bicycle and Pedestrian Facilities

No marked crosswalks exist at the 172nd Street NE (SR 531)/11th Ave NE intersection. Sidewalks exist along the Lakewood Highschool project frontages on 11th Ave NE and 172nd Street NE (SR 531).

A bike lane exists on the east side of 11th Ave NE, south of 172nd Street NE (SR 531).

Existing Transit Services

Transit service in the project site vicinity is provided by Community Transit. The closest bus stop is located on 172nd Street NE at 11th Ave NE. The bus stop provides access to Community Transit Route 240 which provides service between Stanwood Downtown Park & Ride and Smokey Point Transit Center throughout the day with approximately 1-hour headways.

City Planned Improvements

Based on review of the currently adopted *City of Marysville 2023-2028 Six Year TIP (TIP)* and Marysville's Lakewood Neighborhood Master Plan, a future roundabout is planned at the 172nd Street NE (SR 531)/11th Ave NE intersection.

Future Traffic Volumes

The year of opening for the proposed *Gemmer Residential* project is 2030. However, a 2036 Horizon Year was used in this analysis, consistent with City of Marysville guidelines. Year 2036 Baseline (without project) peak hour traffic volumes were estimated by applying a 3.0 percent annual background growth rate to the existing 2023 volumes, consistent with the *Gemmer Residential Traffic Impact Analysis* (TENW, November 2023). Appendix C includes the existing PM peak hour traffic count sheets.

The 2036 With Project traffic volumes were determined by adding the trip assignment from the proposed development (per the *Gemmer Residential Traffic Impact Analysis* (TENW, November 2023)) to the future 2036 Baseline traffic volumes. The resulting 2036 Baseline and With Project PM peak hour traffic volumes at the 172nd Street NE (SR 531)/11th Ave NE intersection are shown in Figure 3.

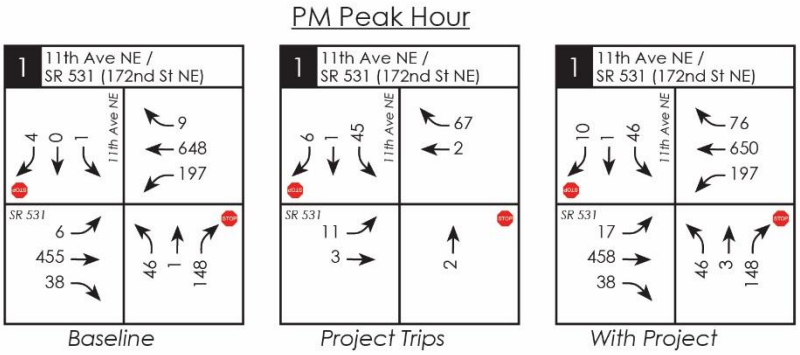

Figure 2: 2036 Weekday PM Peak Hour Traffic Volumes

N
NOT TO SCALE

Intersection Control Evaluation Alternatives and Initial Screening

The following section details the three (3) intersection control alternatives that were identified for preliminary consideration at the 172nd Street NE (SR 531)/11th Ave NE intersection.

A) No Action Alternative

The No Action Alternative would maintain the existing channelization at the intersection and maintain the stop-control from 11th Ave NE onto 172nd Street NE (SR 531).

The No Action Alternative does not pass initial screening at the 172nd Street NE (SR 531) intersection due to the level of service deficiencies (LOS F) reported in the *Gemmer Residential Traffic Impact Analysis* (TENW, November 2023).

B) Traffic Signal Alternative

The Traffic Signal Alternative would install a traffic signal at the intersection while maintaining the existing channelization.

Based on review of the currently adopted *City of Marysville 2023-2028 Six Year TIP (TIP)* and Marysville's Lakewood Neighborhood Master Plan, a future roundabout is planned at the 172nd Street NE (SR 531)/11th Ave NE intersection. Therefore, the Traffic Signal Alternative does not pass initial screening as it does not align with City goals/objectives at this intersection.

C) Compact Roundabout Alternative

The Compact Roundabout Alternative would install a new compact (single-lane) roundabout at the intersection, consistent with the City's future plans for this intersection and the 172nd Street NE (SR 531) corridor.

A preliminary conceptual plan illustrating the Roundabout Alternative is included in Appendix D.

Based on a review of the three (3) preliminary intersection control alternatives, only the Compact Roundabout Alternative passed initial screening. Therefore, the Compact Roundabout Alternative was evaluated at the 172nd Street NE (SR 531)/11th Ave NE intersection.

STEP 2: FEASIBILITY

Right-Of-Way (ROW)

Preliminary design of the Compact Roundabout Alternative (see Appendix D) anticipates that third-party right-of-way acquisition would likely not be required to complete the improvements.

Environmental

The addition of project traffic at the 172nd Street NE (SR 531)/11th Ave NE intersection may result in minor increases in emissions and fuel consumption under the Compact Roundabout Alternative. However, there are no known environmental constraints at the 172nd Street NE (SR 531)/11th Ave NE location that would prevent the alternative from being feasible. The Compact Roundabout Alternative, due to its reduced delay at the intersection, would be expected to result in a lower emissions impact. While the construction of a roundabout may result in short-term construction impacts on the community, roundabouts require low levels of long-term maintenance and are therefore expected to have low long-term impacts on the environment.

Context Sensitive & Sustainable Design

Context sensitive and sustainable design considers a transportation project's effects on the aesthetic, social, economic, and environmental values, needs, constraints, and opportunities in a larger community setting.

While construction of intersection improvements at the 172nd Street NE (SR 531)/11th Ave NE intersection will disrupt traffic under the Compact Roundabout Alternative, traffic control measures would be implemented to minimize impacts to commuters, freight movement, and adjacent neighborhoods/businesses.

Based on the findings of *NCHRP Project 03-110* which evaluates the life-cycle cost of intersection designs through various case studies, the Compact Roundabout Alternative would likely result in the relatively low life-cycle cost. Factors included in estimating total net present value include but are not limited to environmental impacts, safety, multimodal efficiency, and transit/truck reliability.

A future roundabout is identified as the preferred design alternative in the *City of Marysville 2023-2028 Six Year TIP (TIP)* and Marysville's Lakewood Neighborhood Master Plan. As a result, a compact roundabout at the 172nd Street NE (SR 531)/11th Ave NE intersection would align with regional/City/State goals, objectives, and plans for the 172nd Street NE (SR 531) corridor. Additionally, the Compact Roundabout Alternative would better control vehicular traffic on 172nd Street NE (SR 531) considering the heavy east/west volumes in comparison to the side street volumes.

Bicycle and Pedestrian Facilities

11th Ave NE and 172nd Street NE (SR 531) currently experience low pedestrian and bicycle activity during the PM peak hour; however, the City of Marysville is expected to experience developmental growth in the vicinity of the *Gemmer Residential* project by 2036.

The Compact Roundabout Alternative would offer non-motorized improvements by providing new sidewalk/bicycle facilities along the *Gemmer Residential* project frontage on 172nd Street NE (SR 531), and new sidewalk on 11th Ave NE. Additionally, the proposed roundabout design would tie into the existing sidewalks/bicycle facilities along the Lakewood High School project frontages on 11th Ave NE and 172nd Street NE. Curb, gutter, curb ramps, and marked crosswalks would be provided on all four legs of the roundabout.

The Compact Roundabout alternative would be expected to provide a desirable environment for a pedestrian crossing 172nd Street NE (SR 531) because it would lower speeds along the corridor, reduce conflict points at the intersection, and provide a median refuge for pedestrians crossing 172nd Street NE (SR 531).

Transit Services

Transit service in the project site vicinity is provided by Community Transit. The closest bus stops are located on 172nd Street NE at 11th Ave NE. The bus stop provides access to Community Transit Route 240 which provides service between Stanwood Downtown Park & Ride and Smokey Point Transit Center throughout the day with approximately 1-hour headways. The Compact Roundabout Alternative is not expected to have a significant impact on transit services at this location.

STEP 3: OPERATIONAL AND SAFETY PERFORMANCE ANALYSIS

Operations Analysis

Level of service (LOS), queuing, and volume to capacity (V/C) analyses were completed for future year 2036 weekday PM peak hour With Project conditions, consistent with the *Gemmer Residential Traffic Impact Analysis* (TENW, November 2023).

LOS, queuing, and volume to capacity calculations were based on *Synchro 12* and *Sidra 9* traffic analysis software. LOS methodology, queue, and volume to capacity calculations are included in Appendix E. The volumes used in the analyses were shown previously in Figure 2.

Table 1 summarizes the future year 2036 LOS, queuing, and volume to capacity results at the 172nd Street NE (SR 531)/11th Ave NE intersection. The reported queues are estimated 95th percentile queues that are exceeded only 5 percent of the time.

Table 1
Future 2036 PM Peak Hour LOS Summary

	ICE Alternative (With Project)			
	Compact Roundabout			
Time Period	LOS[1]	Delay (sec)[2]	95th % Queue (ft)	V/C Ratio
172nd Street NE (SR 531) / 11th Ave NE	A	5.0		
Eastbound Approach	A	6.1	125'	0.57
Westbound Approach	A	3.7	375'	0.84
Northbound Approach	A	6.2	50'	0.29
Southbound Approach	B	12.4	25'	0.14

1. LOS = Level of Service.
2. Delay refers to average control delay expressed in seconds per vehicle.

As shown in Table 1, the Compact Roundabout Alternative is expected to meet the applicable LOS standard with v/c ratios less than 1.0 for every approach. Additionally, queueing for the Compact Roundabout Alternative may be considered minimal.

Safety Analysis

Crash History

Crash history is summarized for the five-year period from 2018 to 2022 at the 172nd Street NE (SR 531)/11th Ave NE intersection. Crash data was provided by WSDOT.

It should be noted that *"Under 23 U.S. Code § 148 and 23 U.S. Code § 409, safety data, reports, surveys, schedules, lists compiled or collected for the purpose of identifying, evaluating, or planning the safety enhancement of potential crash sites, hazardous roadway conditions, or railway-highway crossings are not subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data."*

Summaries of the total, yearly average, and crashes per million entering vehicles (MEV) are provided in Table 2. Summaries of crashes by severity over the five-year period are provided in Table 3. Summaries of crashes by type over the five-year period are provided in Table 4. The detailed crash history is included in Appendix F.

Table 2
Crash Data Summary by Year, January 1, 2018 to December 31, 2022

	2018	2019	2020	2021	2022	Five-Year Total Crashes	Average Annual Crash Frequency	Est. AWDT[1]	Crashes per MEV [2]
Intersection									
172nd Street NE (SR 531) / 11th Ave NE	0	0	1	2	1	4	0.80	10,580	0.35

Source: WSDOT Crash Data.
[1] AWDT = Average Weekday Daily Traffic. Estimated daily volumes are based on 2023 PM volumes and a K-factor of 10.
[2] MEV = Million Entering Vehicles.

Table 3
Crash Data Summary by Severity, January 1, 2018 to December 31, 2022

	Fatal	Suspected Injury	No Injury/ Property Damage Only	Five-Year Total Crashes
Intersection				
172nd Street NE (SR 531) / 11th Ave NE	0	2	2	4

Source: WSDOT Crash Data.

Table 4
Crash Data Summary by Type, January 1, 2018 to December 31, 2022

	Crash Type							
	Angle (Left/Right)	Angle (T)	Sideswipe	Rear-end	Parked Veh / Fixed Object	Ped/ Bike	Other	Five-Year Total Crashes
Intersection								
172nd Street NE (SR 531) / 11th Ave NE	2	1	1	0	0	0	0	4

Source: WSDOT Crash Data.

A review of the crash data shows that two (2) of the four (4) crashes that occurred at the intersection resulted from entering at angle (Angle-Left/Right) crashes, one of which was reported to result in a suspected injury. One (1) crash resulted from vehicles crashing from opposite directions (Angle-T) and was reported to result in a suspected injury. One (1) crash resulted from a sideswipe crash and was not reported to result in any apparent injury.

The Compact Roundabout Alternative is expected to yield a positive impact to the safety performance at the 172nd Street NE (SR 531)/11th Ave NE intersection.

Per the U.S. Department of Transportation Federal Highway Administration (FHWA), a typical modern roundabout results in lower speeds and fewer conflict points than other intersection control alternatives and is a proven safety countermeasure for intersection control.[1] The Compact Roundabout Alternative would be expected to manage vehicular speeds along 11th Ave NE and 172nd Street NE (SR 531).

Given roundabouts result in lower speeds and fewer conflict points, the potential for severe right angle and left-turn head-on crashes is significantly reduced with a roundabout. Additionally, roundabouts are an effective traffic calming method that effectively transition traffic from high-speed to low-speed environments while maintaining efficiency.

Design Vehicle Turning Movements

For the Compact Roundabout Alternative, the final design would ensure that the intersection could accommodate the largest design vehicle as coordinated with WSDOT and the City of Marysville as part of the design review process.

STEP 4: SELECTION

Based on the analysis presented in this Intersection Control Evaluation (ICE), the proposed Compact Roundabout Alternative is the recommended alternative at the 172nd Street NE (SR 531)/11th Ave NE intersection.

FINDINGS/CONCLUSIONS

This traffic impact analysis (TIA) has been prepared for the proposed *Gemmer Residential* project located in the Lakewood area of the City of Marysville, WA.

Project Proposal. The proposed *Gemmer Residential* project site is located east of 11th Ave NE and north of 172nd Street NE. The proposed project will include up to 185 Single-Family Detached homes. The site includes one (1) existing Single-Family Detached home that would be removed with the proposed project.

Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located southeast of the site.

Trip Generation. The *Gemmer Residential* project is estimated to generate 1,762 net new weekday daily trips, with 129 net new trips (32 in, 97 out) occurring during the AM peak hour and 184 net new trips (116 in, 68 out) occurring during the PM peak hour.

Future City Road Plans. The City of Marysville has identified several future road improvements, intersections, and connections in the vicinity of the project site. These connector roads are identified on the City's Comprehensive Plan, City's Lakewood Neighborhood Plan, the City's six-year 2023-2028 Transportation Improvement Plan (TIP), and/or the City's traffic impact fee program. And it should be noted that portions of some of these City improvements would be completed by the *Gemmer Residential* project as mitigation, which is further described in the Mitigation section below.

Intersection Level of Service (LOS). The City of Marysville and WSDOT LOS standard at all study intersections is LOS D with one exception, as noted in the City of Marysville *Traffic Impact Analysis Guidelines,* which state that intersections on the 172nd Street NE (SR 531) corridor that have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E.

The intersection LOS analyses documented in this report were assessed during the weekday PM peak hour at eight (8) off-site study intersections. All study intersections are anticipated to meet the applicable LOS standards in 2030 (buildout year) and 2036 (horizon year) during the weekday PM peak hour without or with the proposed *Gemmer Residential* project with two (2) exceptions:

- 11th Ave NE / 172nd Street NE (LOS F in 2030 and 2036, without or with project): The City has identified a roundabout at this intersection in their transportation improvement plan (TIP #25). The *Gemmer Residential* project will construct a new single-lane roundabout (or a portion of a new roundabout) at this intersection as mitigation. As a single-lane roundabout, the intersection is anticipated to operate at LOS B in 2036 without or with the proposed project during the PM peak hour.
- 19th Ave NE / 172nd Street NE (LOS E in 2030, with project): The City has identified a roundabout at this intersection in their transportation improvement plan (TIP #24). The new roundabout is required as a condition of approval for the Lodge Apartments project. As such, this improvement is assumed to be completed by 2036 (when the 156th Street NE Interchange project is complete) and is expected to operate at LOS A in 2036 as a future roundabout, without or with the project. Therefore, no mitigation is proposed at this intersection with the *Gemmer Residential* project.

Site Access Evaluation. The LOS results indicate that the individual movements at the proposed site access intersection are expected to operate at LOS A with minimal queuing during the weekday PM peak hour in 2030 (buildout year) and 2036 (horizon year).

Mitigation. The following measures have been identified to mitigate traffic impacts of the *Gemmer Residential* project.

- City of Marysville Traffic Impact Fees. The City of Marysville requires payment of transportation impact fees to help fund planned roadway improvements throughout the City. Transportation impact fees for the proposed *Gemmer Residential* project were calculated based on the trip generation estimate documented in this TIA and the City of Marysville's currently adopted transportation impact fee rate of $6,300 per PM peak hour trip.

  The proposed *Gemmer Residential* project is estimated to generate 184 net new PM peak hour trips. As a result, the estimated City of Marysville transportation impact fee is **$1,159,200** ($6,300 X 184 PM peak hour trips). Actual impact fees will be calculated by the City at the time of building permit issuance.

- Snohomish County Mitigation. The City of Marysville and Snohomish County have adopted an interlocal agreement whereby developments in Marysville must assess potential mitigation for impacts on Snohomish County roadway facilities. Mitigation fees to Snohomish County are based on predetermined distribution percentages according to location or specific project impacts to planned roadway improvements.

  Mitigation fees to Snohomish County were estimated with application of the standard distribution percentage based on the project location (20%) multiplied by the daily trip generation (1,762 net new daily project trips) and adopted cost per ADT ($185 for residential developments within TSA A and the UGA). The resulting Snohomish County transportation impact fee is **$65,194**. A mitigation offer form to Snohomish County will be submitted separately.

- Future City Road Plans. The *Gemmer Residential* project would build a portion of the following City planned improvements:

  - Construct and dedicate right-of-way for the northern half-street of a 3-lane section on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. Construct frontage improvements including new curb, gutter, sidewalk, and street lighting on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. It should be noted that it is anticipated the applicant would receive transportation impact fee credit for frontage and roadway improvements on 172nd Street NE.
  - Construct frontage improvements on 11th Ave NE from 172nd Street NE to the northern site property line including new curb, gutter, sidewalk, and street lighting.
  - Construct a new roundabout (or a portion of a new roundabout) at 11th Ave NE / 172nd Street NE. Credit toward City transportation impact fees is expected with the anticipated addition of this roundabout to the next adoption of the City's six-year TIP.

INTRODUCTION

This traffic impact analysis (TIA) has been prepared for the proposed *Gemmer Residential* project located in the Lakewood area of the City of Marysville, WA. The proposed project will include up to 185 Single-Family Detached homes. A site vicinity map is provided in Figure 1.

Project Description

The proposed project will include up to 185 Single-Family Detached homes. The site includes one (1) existing Single-Family Detached home that would be removed with the proposed project.

Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located southeast of the site. A preliminary site plan is shown in Appendix A.

Traffic Scoping & Study Area

The scope of work for this Traffic Impact Analysis was prepared consistent with City of Maryville's adopted Traffic Impact Analysis guidelines (June 2023) and confirmed by the City during the scoping process. A total of eight (8) off-site study intersections were identified for evaluation during future weekday PM peak hour conditions in 2030 (buildout year) and 2036 (horizon year):

1. 11th Ave NE / 172nd St NE
2. Gas Station Access / 172nd St NE
3. 19th Dr NE / 172nd St NE
4. 19th Ave NE / 172nd St NE
5. 23rd Ave NE /172nd St NE
6. 27th Ave NE /172nd St NE
7. I-5 SB Ramps /172nd St NE
8. I-5 NB Ramps /172nd St NE

Project Approach

To analyze the traffic impacts of the *Gemmer Residential* development, the following tasks were undertaken:

- Assessment of existing conditions through field reconnaissance and review of existing planning documents.
- Estimation of weekday vehicular AM peak hour, PM peak hour, and weekday daily trips generated by the development.
- Evaluation of weekday PM peak hour level of service (LOS) at eight (8) off-site study intersections.
- Analyzed the weekday PM peak hour operations at the proposed site access intersection including LOS and queues. Review of City planning documents to evaluate long-term road improvements plans in project vicinity.
- Documentation of trip impacts at Snohomish County Key Intersections.
- Summary of mitigation including transportation impact fees to City of Marysville and Snohomish County, and construction of local roadway improvements adjacent to the site.

EXISTING CONDITIONS

This section describes existing transportation system conditions in the study area. Existing conditions described include an inventory of existing roadways, public transportation services, non-motorized transportation facilities, existing traffic volumes, and intersection levels of service (LOS).

Roadway Network

The existing street characteristics in the vicinity of the proposed *Gemmer Residential* project are described below in Table 1.

Table 1
Existing Roadway Network Summary – Project Site Vicinity

Roadway	Orientation	Classification	Speed Limit	Number of Travel Lanes	Street Parking	Sidewalks	Bicycle Facilities
172nd St NE (SR 531)	East-West	State Highway	35 mph	3 - 4	None	Intermittent	Intermittent Bike Lanes
11th Ave NE	North-South	Local Street	25 mph	2	None	None	None

Transit Service

Transit service in the project site vicinity is provided by Community Transit. The closest bus stop is located on 172nd Street NE at 11th Ave NE. The bus stop provides access to Community Transit Route 240 which provides service between Stanwood Downtown Park & Ride and Smokey Point Transit Center throughout the day with approximately 1-hour headways.

Non-motorized Transportation Facilities

Non-motorized transportation facilities in the project site vicinity include a mix of sidewalks and paved shoulders. Existing pedestrian activity is minimal in the project vicinity based on recent PM peak period traffic counts.

Collision History

Historical collisions at the eight (8) off-site study intersections and seven (7) roadway segments were analyzed for the three-year period from 2020 to 2022. Collision data was provided by WSDOT. Summaries of the total and yearly average collisions during this period at the off-site study intersections are provided in Table 2. Summaries of collisions by type at the off-site study intersections are provided in Table 3. Summaries of the total and yearly average collisions along the roadway segments are provided in Table 4.

The detailed collision history is included in Appendix B.

Table 2
Collision Data Summary, January 1, 2020, to December 31, 2022

Roadway Segment	2020	2021	2022	3-Year Total Collisions	Avg. Annual Collisions	Est. AWDT[1]	Collisions per MEV[2]
1) 11th Ave NE / 172nd St NE	1	2	1	4	1.33	10,580	0.35
2) Gas Station Access / 172nd St NE	0	0	0	0	1.00	10,310	0.00
3) 19th Dr NE / 172nd St NE	2	1	0	3	1.00	11,660	0.23
4) 19th Ave NE / 172nd St NE	2	3	2	7	2.33	12,050	0.53
5) 23rd Ave NE / 172nd St NE	1	2	3	6	2.00	15,100	0.36
6) 27th Ave NE / 172nd St NE	5	7	4	16	5.33	34,980	0.42
7) I-5 SB Ramps / 172nd St NE	4	7	8	19	6.33	38,660	0.45
8) I-5 NB Ramps / 172nd St NE	6	3	7	16	5.33	44,020	0.33

Source: WSDOT Collision Records.
[1] AWDT = Average Weekday Daily Traffic. Estimated daily volumes are based on 2023 PM volumes and a K-factor of 10.
[2] MEV = Million Entering Vehicles.
[3] MVM = Million Vehicle Miles.

Per the City of Marysville's *Traffic Impact Analysis Guidelines* (June 2023) intersection collision rates over 1.0 collision per MEV and roadway segment collision rates over 10.0 collisions per MEV generally warrant further review to determine if any patterns exist. Based on the collision data, none of the eight (8) off-site study intersections have rates that exceed 1.0 collision per MEV. Additionally, none of the seven (7) roadway segments have rates that exceed 10.0 collisions per MEV or 10.0 collisions per MVM.

Traffic Volumes

Existing weekday PM peak hour traffic volumes at the eight (8) off-site study intersections were based on counts conducted by All Traffic Data in October 2023. The PM peak hour represents the highest one-hour time period between 4:00 and 6:00 PM. Figure 2 illustrates the 2023 existing weekday PM peak hour traffic volumes at the eight (8) off-site study intersections. Appendix C includes the PM peak hour traffic count data sheets.

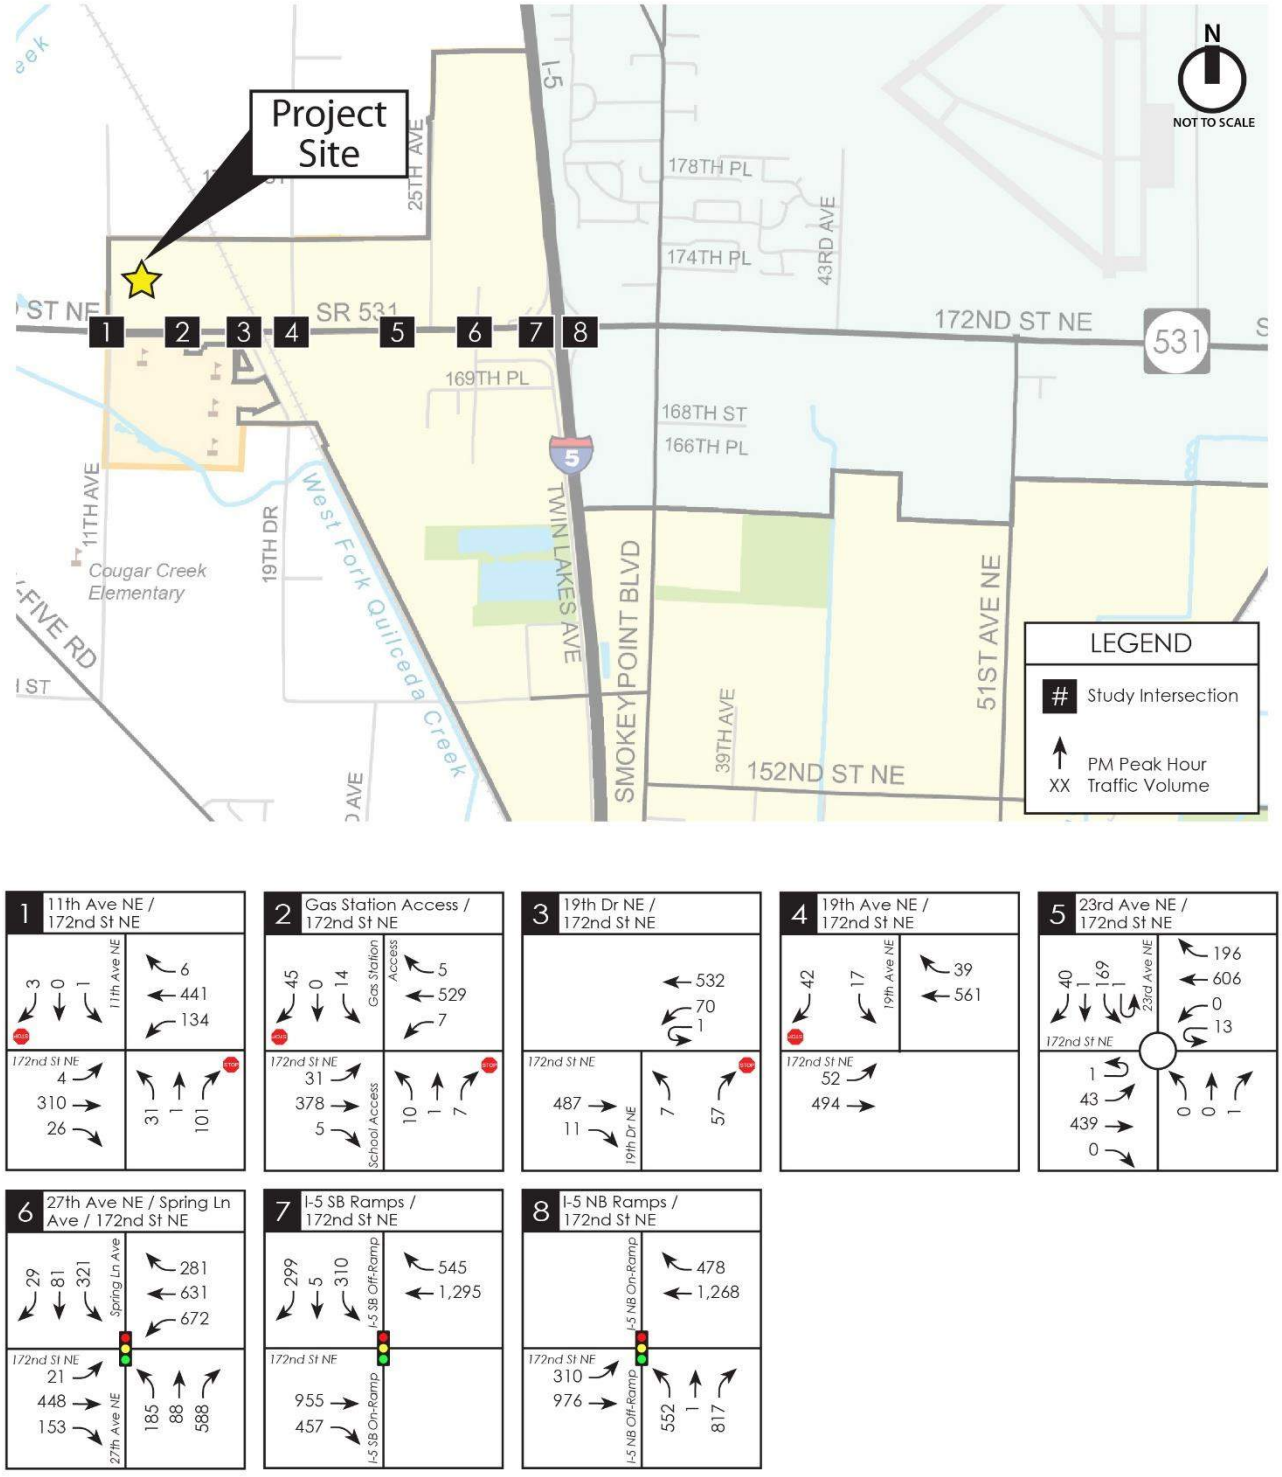

Figure 2: 2023 Existing PM Peak Hour Traffic Volumes

Intersection Levels of Service

Level of service calculations for intersections were based on the use of *Synchro 12* traffic analysis software. LOS methodology is included in Appendix C.

Existing signal timing was provided by WSDOT and City of Marysville at the signalized study intersections. Level of service calculations for the roundabout study intersections were based on WSDOT methodology and procedures outlined in the *WSDOT Sidra Policy Settings* document using *Sidra 9* traffic analysis software. The existing LOS results at the eight (8) off-site study intersections are summarized in Table 6. Detailed LOS summary worksheets are provided in Appendix D.

Table 5
2023 Existing Weekday PM Peak Hour LOS Summary

Study Intersection / Movement	LOS	Delay (sec)
Stop-Controlled Intersections:		
1) 11th Ave NE / 172nd St NE		
Eastbound Left-Turn	A	8.5
Westbound Left-Turn	A	8.5
Northbound Approach	D	32.4
Southbound Approach	C	15.5
2) Gas Station Access / 172nd St NE		
Eastbound Left-Turn	A	8.9
Westbound Left-Turn	A	8.3
Northbound Approach	C	15.8
Southbound Approach	B	14.9
3) 19th Dr NE / 172nd St NE		
Westbound Left-Turn	A	8.8
Northbound Approach	B	13.4
4) 19th Ave NE / 172nd St NE		
Eastbound Left-Turn	A	9.1
Southbound Approach	C	19.0
Roundabout:		
5) 23rd Ave NE / 172nd St NE	A	4.2
Signalized Intersections:		
6) 27th Ave NE / 172nd St NE	E	58.4
7) I-5 SB / 172nd St NE	A	7.5
8) I-5 NB / 172nd St NE	C	20.4

As shown in Table 6, all study intersections operate at LOS D or better during the weekday PM peak hour under 2023 existing conditions with the exception of the following intersection:

5. 27th Ave NE / 172nd St NE (LOS E)

The City of Marysville and WSDOT LOS standard at intersections is LOS D with one exception. The City of Marysville *Traffic Impact Analysis Guidelines* state that intersections on the 172nd Street NE (SR 531) corridor which have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E. Currently the 27th Ave NE / 172nd St NE intersection operates at LOS E, which applies to this statement.

FUTURE CONDITIONS & PROJECT IMPACTS

This section of the report describes the traffic impacts of the proposed *Gemmer Residential* project on the surrounding and adjacent road network, and at identified off-site study intersections in the project site vicinity. The analysis of traffic impacts includes a trip generation estimate, distribution/assignment of project trips, and PM peak hour LOS evaluation at the eight (8) off-site study intersections and the site access. Consideration of future planned roadway projects identified by the City of Marysville is also documented and considered in the evaluation of intersection LOS.

Future Planned Roadway Improvements

Marysville Comprehensive Plan

The Transportation Element of the *City of Marysville Comprehensive Plan 2015* includes a depiction of the functional classification of existing and planned future roadways within the City limits and adjacent jurisdictions. The planned roadways are intended to serve anticipated growth in Marysville and the surrounding area through 2035.

Marysville's Lakewood Neighborhood Master Plan

The City's Lakewood Neighborhood Master Plan (dated March 2017) cites that it is "consistent with the Marysville Comprehensive Plan and provides additional detail for the Lakewood Neighborhood. This plan focuses on the infrastructure and urban design aspects of the neighborhood."

The *Neighborhood Roadways* section of the Plan identifies roadway improvements to support growth in vehicular and non-motorized demand. The Plan further states that the neighborhood roads create network of minor and collector arterials that create a secondary network to provide alternate routes to 172nd Street NE and 27th Ave NE, and also supports the City's vision of a second I-5 interchange at 156th Street NE.

The Lakewood Neighborhood Master Plan identifies a similar system of north-south and east-west arterials (collector and minor) that were also identified in the City's Comprehensive Plan Transportation Element.

It should be noted that the roadway alignments shown in the Lakewood Neighborhood Master Plan and the City's Comprehensive Plan are intended to represent a planned roadway connection and not necessarily the exact alignment for a planned future roadway. The City's six-year Transportation Improvement Plan (TIP), which is typically adopted annually, implements the elements of the City Comprehensive Plan and Lakewood Neighborhood Plan; that plan is described next.

Marysville Transportation Improvement Plan

The City's plan for funding and implementing new roadway and intersection improvement projects that come out of the Comprehensive Plan and Neighborhood Master Plans is administered through a six-year Transportation Improvement Plan which is typically adopted and updated annually.

Based on review of the currently adopted *City of Marysville 2023-2028 Six Year Transportation Improvement Plan (TIP),* there are eight (8) planned improvements in the vicinity of the *Gemmer Residential* project that impact the off-site study intersections or connectivity of the adjacent street network.

Most of these projects are included in the City's Transportation Element of the Comprehensive Plan, the City's Lakewood Neighborhood Master Plan, and the City's Traffic Impact Fee program.

The eight (8) planned improvements in the vicinity of the *Gemmer Residential* project that impact the off-site study intersections or connectivity of the adjacent street network are as-follows:

- Marysville TIP #24 – 172nd Street NE / 19th Avenue NE Roundabout – construct new roundabout at the 19th Avenue NE / 172nd Street NE intersection. The project is anticipated to be funded by new development in the vicinity.

  Note: this improvement is required as a condition of approval for the Lodge Apartments project. Therefore, this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios (when the 156th Street NE Interchange project is complete).

- Marysville TIP #25 – 172nd Street NE / 11th Avenue NE Roundabout – construct new roundabout at the 11th Avenue NE / 172nd Street NE intersection. The project is anticipated to be funded by new development in the vicinity, and anticipated to be added to the City's funded list in the next update to the six-year TIP.

  Note: this project is not yet a condition of approval of any development and is not assumed in the future roadway network or traffic analysis herein. The Gemmer Residential project is anticipated to fund and construct a portion of this project.

- Marysville TIP #30 – 172nd Street NE: 27th Avenue NE to 19th Avenue NE – widen 172nd Street NE from a 3-lane section to a 4/5-lane section with pedestrian and bicycle facilities between 27th Avenue NE and 19th Avenue NE. The project is anticipated to be funded by new development in the vicinity.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- Marysville TIP #31 – 172nd Street NE: 11th Avenue NE to 19th Drive NE – widen 172nd Street NE from a 2-lane section to a 3-lane section with pedestrian and bicycle facilities between 11th Avenue NE and 19th Drive NE. The project is anticipated to be funded by new development in the vicinity.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor but does not change roadway geometry at any of the off-site intersections. The Gemmer Residential project is anticipated to complete a portion of this project along its' project frontage.

- Marysville TIP #36 – 172nd Street NE Railroad Crossing Improvements – widen 172nd Street NE from a 2-lane section to a 3-lane section with pedestrian and bicycle facilities and provide railroad crossing improvements.

  Note: this project is not yet a condition of approval of any development and is not otherwise funded. Therefore, this improvement is not assumed in the future roadway network.

- TIP #48 – 23rd Avenue NE & 169th Street NE – construct new 3-lane roadways including pedestrian and bicycle facilities. Connections to the existing street network would be provided at the existing roundabout at 23rd Avenue NE / 172nd Street NE and the existing western terminus of 169th Street NE. The project is anticipated to be funded and constructed by new development in the vicinity.

  Note: this project is not yet a condition of approval of any development and is not otherwise funded. Therefore, this improvement is not assumed in the future roadway network or traffic analysis herein.

- TIP #51 – 19th Avenue NE Extension from 156th Street NE to 172nd Street NE – construct new 3-lane roadway between 156th Street NE and 172nd Street NE that would include pedestrian and

bicycle facilities. The project is anticipated to be funded and constructed by new development in the vicinity.

Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- TIP #61 – 156th Street NE Interchange – convert the existing road overcrossing at 156th Street NE and Interstate 5 to a full single-point urban interchange (SPUI). The project is funded under Connecting Washington and WSDOT is the lead agency.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios only.

Project Trip Generation

Trip generation estimates associated with full buildout of the proposed *Gemmer Residential* project for weekday daily, AM peak hour, and PM peak hour were based on methodology documented in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition for Land Use Code (LUC) 210 (Single-Family Detached Housing). A weekday PM peak hour trip rate of 1.0 trip per single-family dwelling unit was used, consistent with the City scoping comments. Table 7 summarizes the net new weekday daily, AM peak hour, and PM peak hour trip generation. Detailed trip generation estimates are provided in Appendix E.

Table 6
Gemmer Residential – Trip Generation Summary

	Net New Trips Generated		
Weekday Time Period	In	Out	Total
Daily	881	881	1,762
AM Peak Hour	32	97	129
PM Peak Hour	116	68	184

Project Trip Distribution and Assignment

The distribution of project-generated trips during the weekday PM peak hour was estimated based on traffic model distribution figures provided by the City of Marysville. These figures are included in Appendix F. The model distribution was used to assign the net new weekday PM peak hour (116 inbound and 68 outbound) trips generated by the *Gemmer Residential* project to the adjacent street network. Separate distribution patterns were used for the 2030 (project buildout) and 2036 (horizon year) analyses due to anticipated changes in the roadway network in the site vicinity. The most significant change is a planned extension of 19th Avenue NE to the south (assumed by year 2036) where it will eventually connect to 156th Street NE.

Based on the trip distribution percentages, net new PM peak hour project trips were assigned through the study intersections. The distribution and assignment of the net new weekday PM peak hour trips through study intersections are shown in Figure 3 (2030 buildout) and Figure 6 (2036 horizon year).

Future Traffic Volumes

Future year 2030 and 2036 No Action PM peak hour traffic volumes were estimated by applying a three (3) percent annual growth rate to the existing traffic counts, which is consistent with City of Marysville TIA Guidelines. No additional pipeline projects were included in the 2030 and 2036 No Action volumes since a three (3) percent annual growth rate was used, which is also consistent with City of Marysville guidelines.

Based on discussions with the City of Marysville, 25 percent of traffic on 172nd Street NE east of 19th Ave NE may be diverted to the south through the Lakewood Neighborhood to account for planned roadway improvements in the vicinity, namely the planned 156th Street NE/I-5 interchange project which is expected to shift existing traffic off 172nd Street NE. Year 2036 PM peak hour traffic volumes were shifted to account for planned roadway improvements as-follows:

- 25 percent of 2036 No Action traffic volumes on 172nd Street NE were diverted to the south on 19th Ave NE and Twin Lakes Ave, and over to the future 156th Street NE interchange with I-5. Diversions were based on PM peak hour turning movement volume distribution on 172nd Ave NE west of the I-5 interchange as directed by City staff.

The resulting future 2030 (buildout year) and 2036 horizon year No Action PM peak hour traffic volumes at the eight (8) off-site study intersections are shown in Figures 4 and 7, respectively. The 2030 and 2036 With Project traffic volumes were determined by adding the trip assignment from the proposed development (shown in Figures 3 and 6) to the future 2030 and 2036 No Action traffic volumes (shown in Figures 4 and 7). The 2030 buildout year and 2036 horizon year With Project traffic volumes are shown in Figures 5 and 8, respectively.

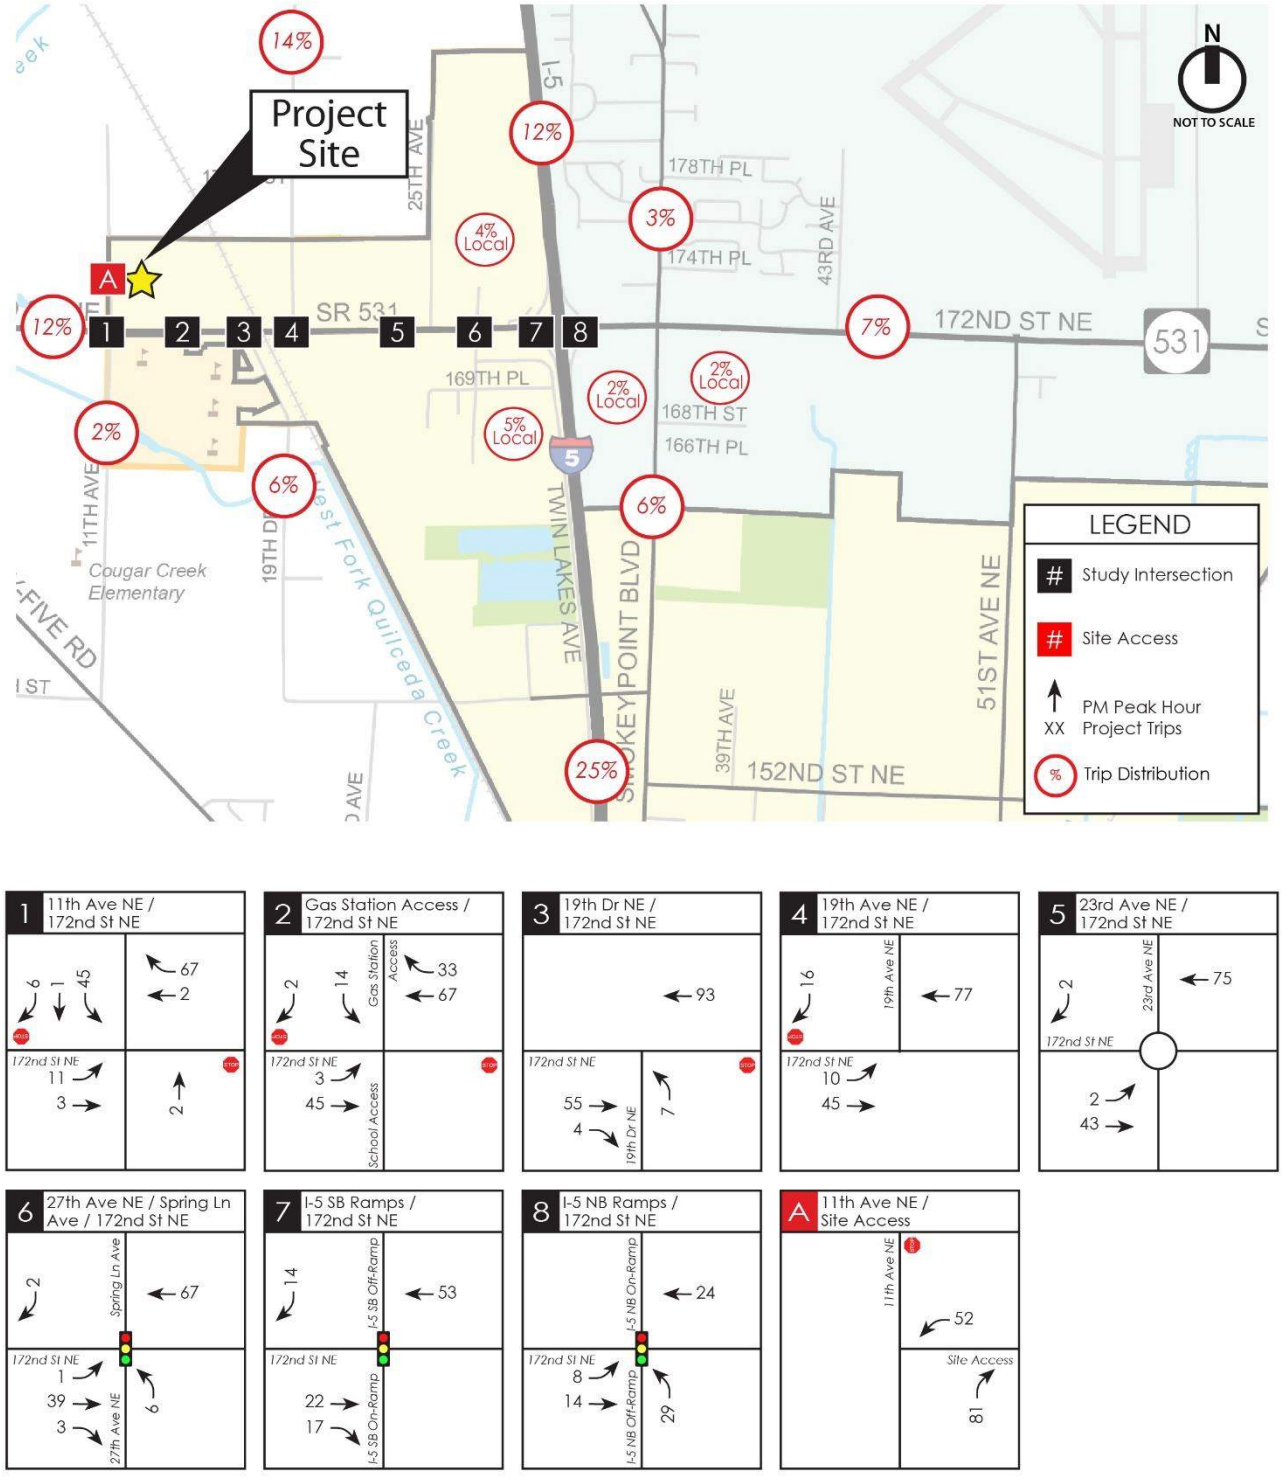

Figure 3: Weekday PM Peak Hour Project Trip Distribution and Assignment (2030 Buildout)

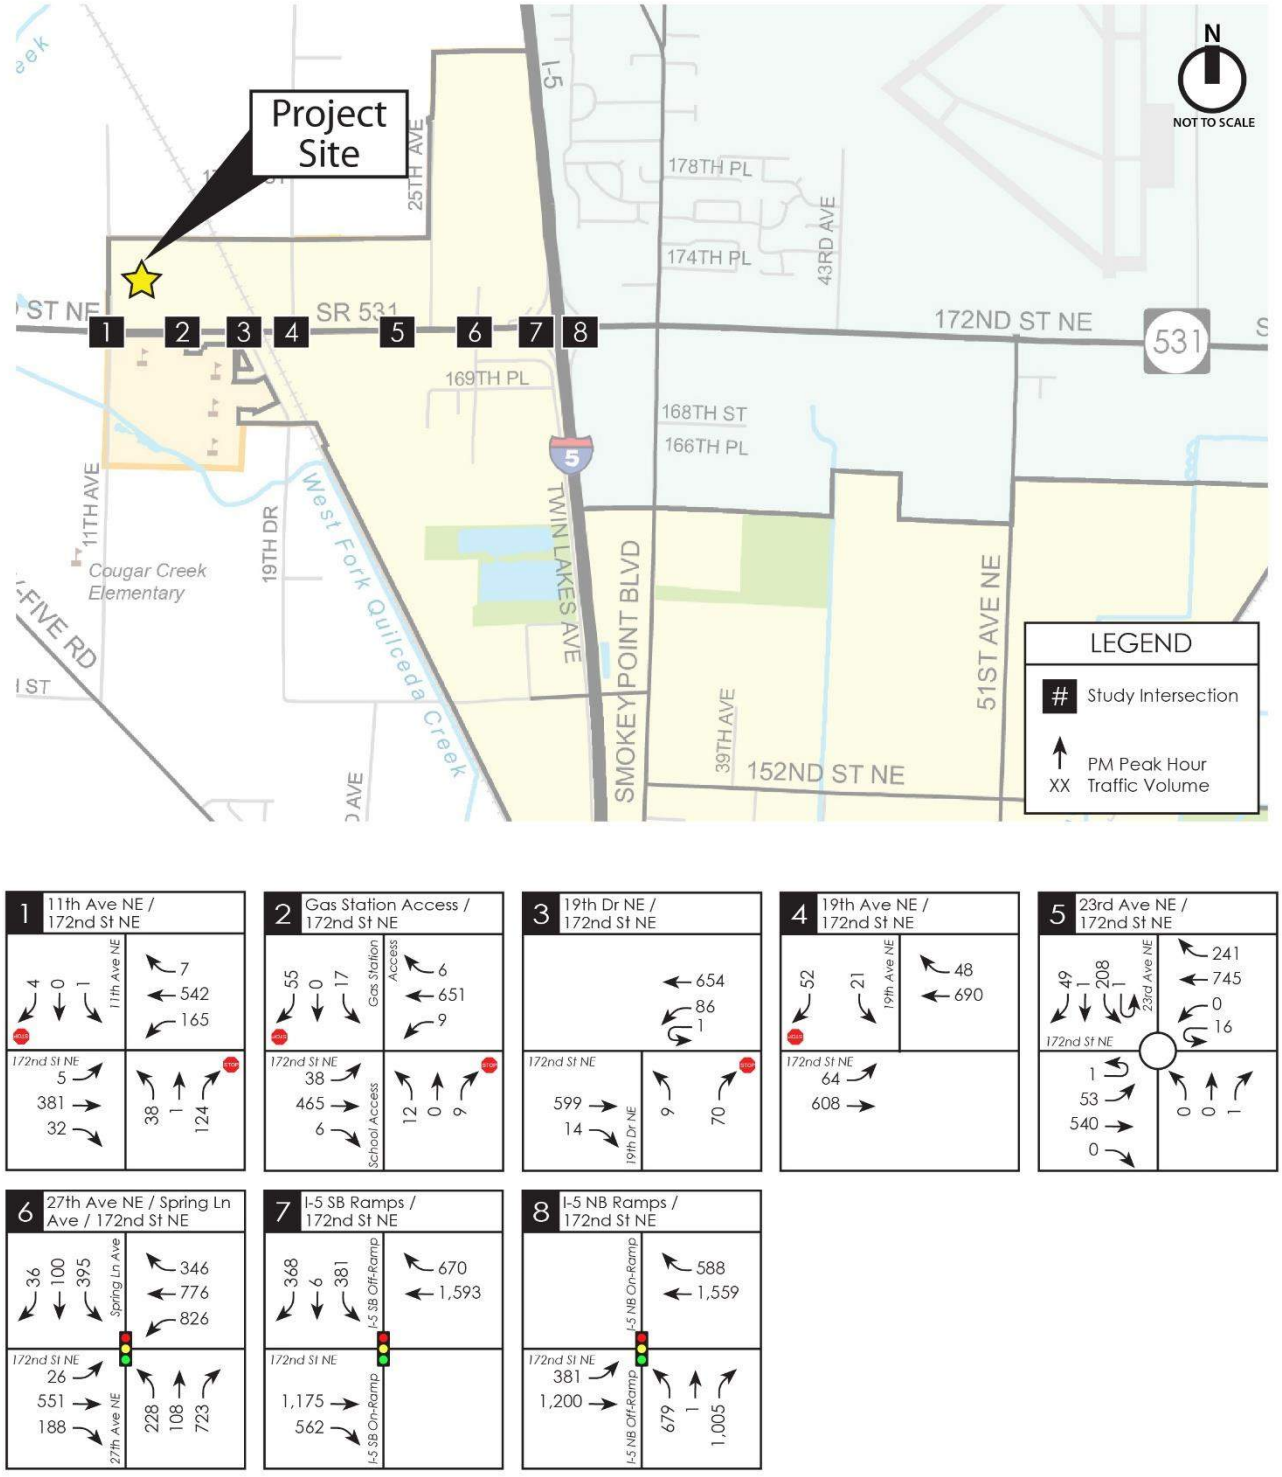

Figure 4: 2030 No Action Weekday PM Peak Hour Traffic Volumes (Buildout)

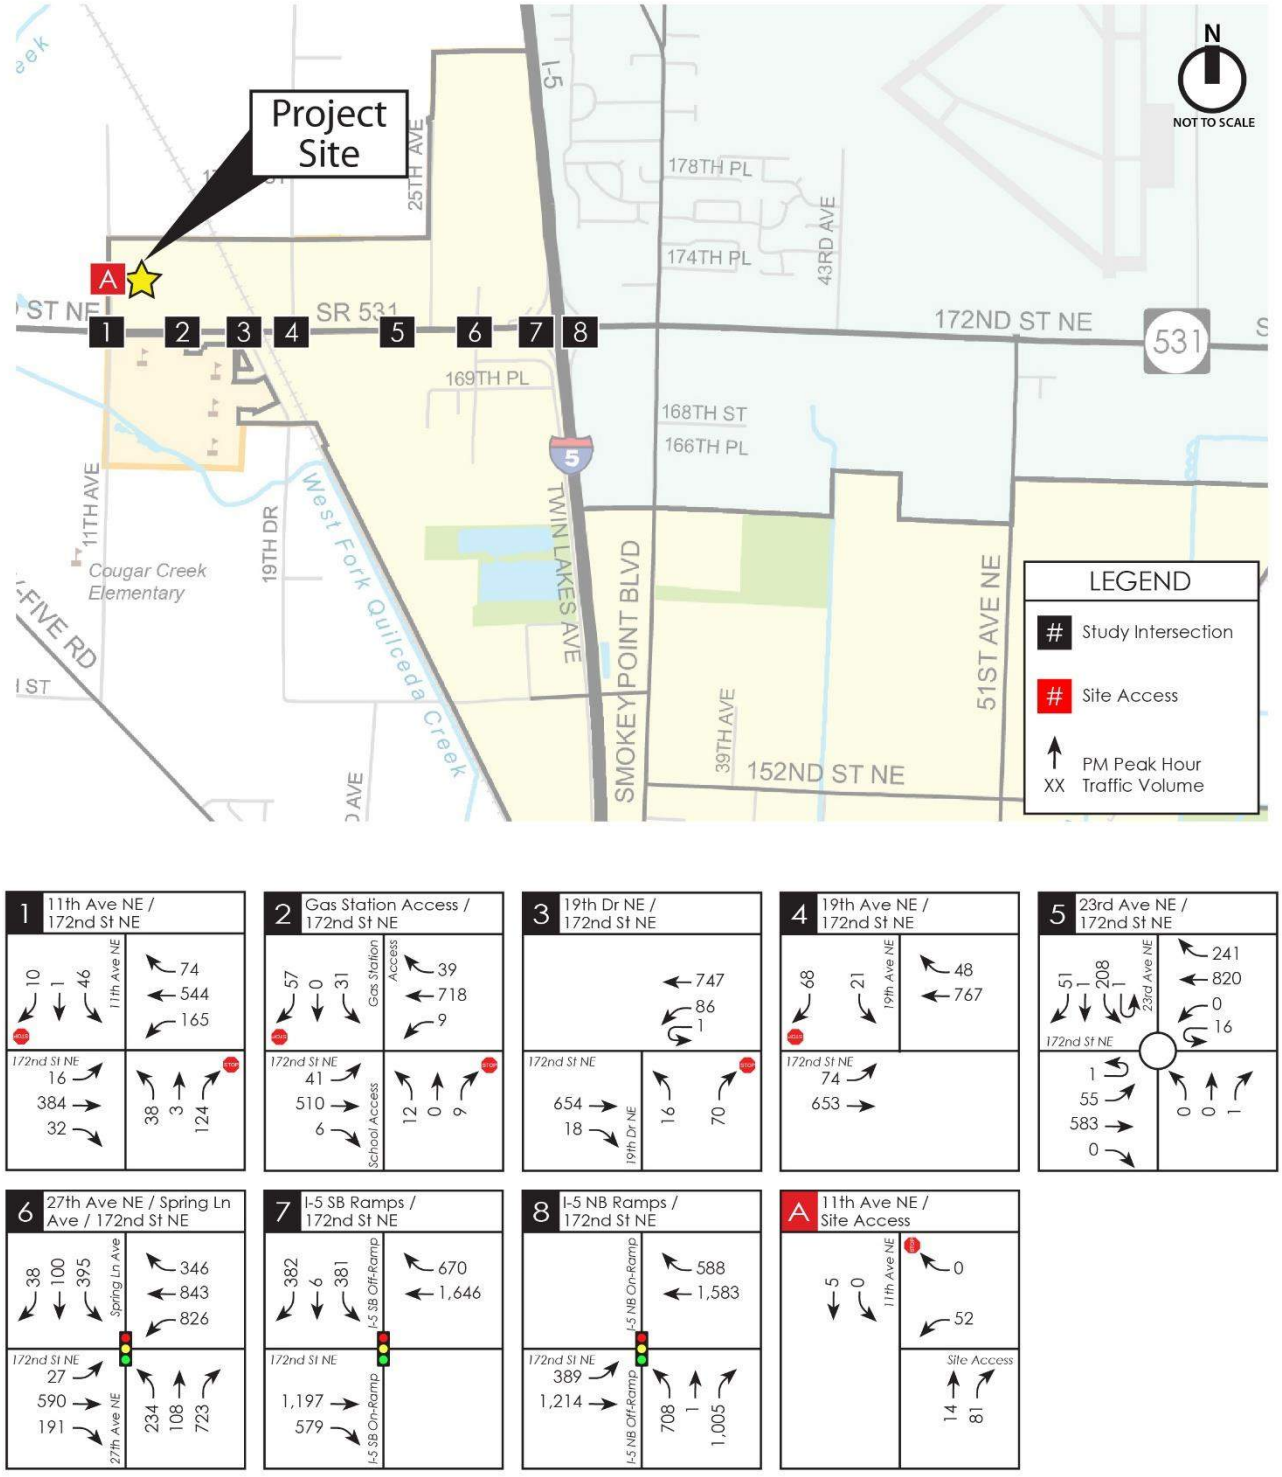

Figure 5: 2030 With Project Weekday PM Peak Hour Traffic Volumes (Buildout)

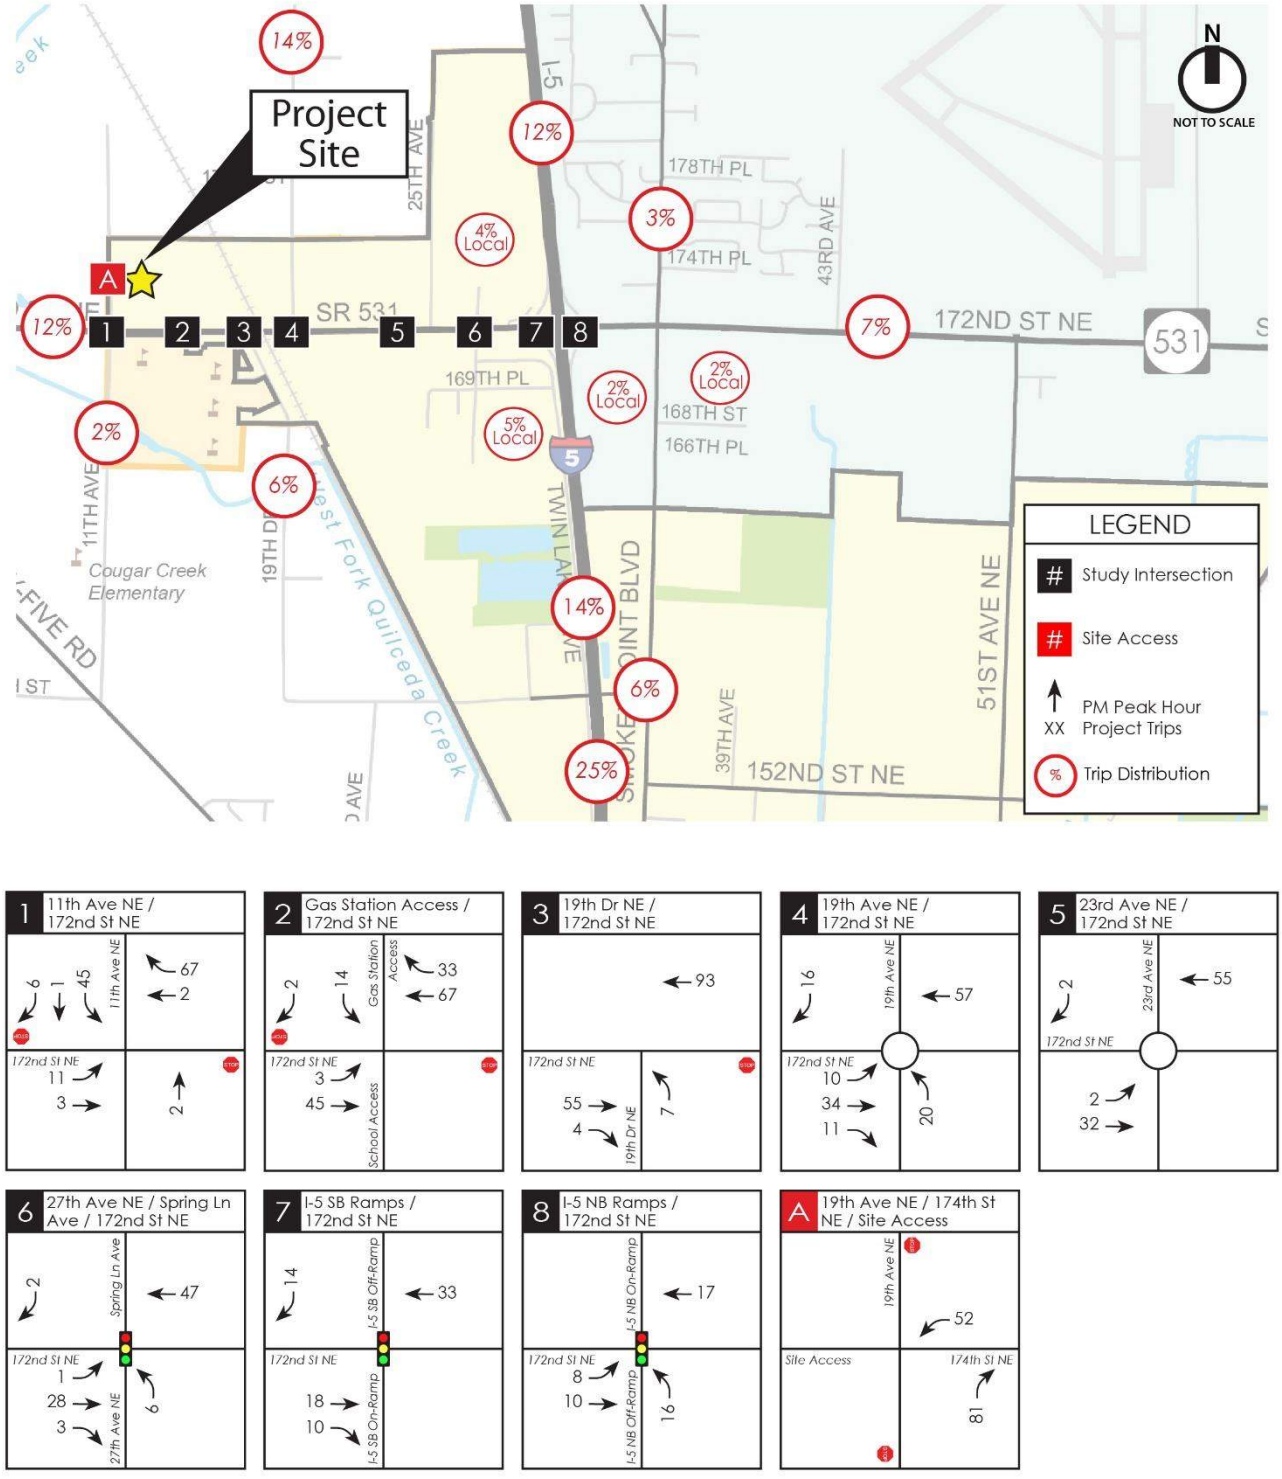

Figure 6: Weekday PM Peak Hour Project Trip Distribution and Assignment (2036 Horizon Year)

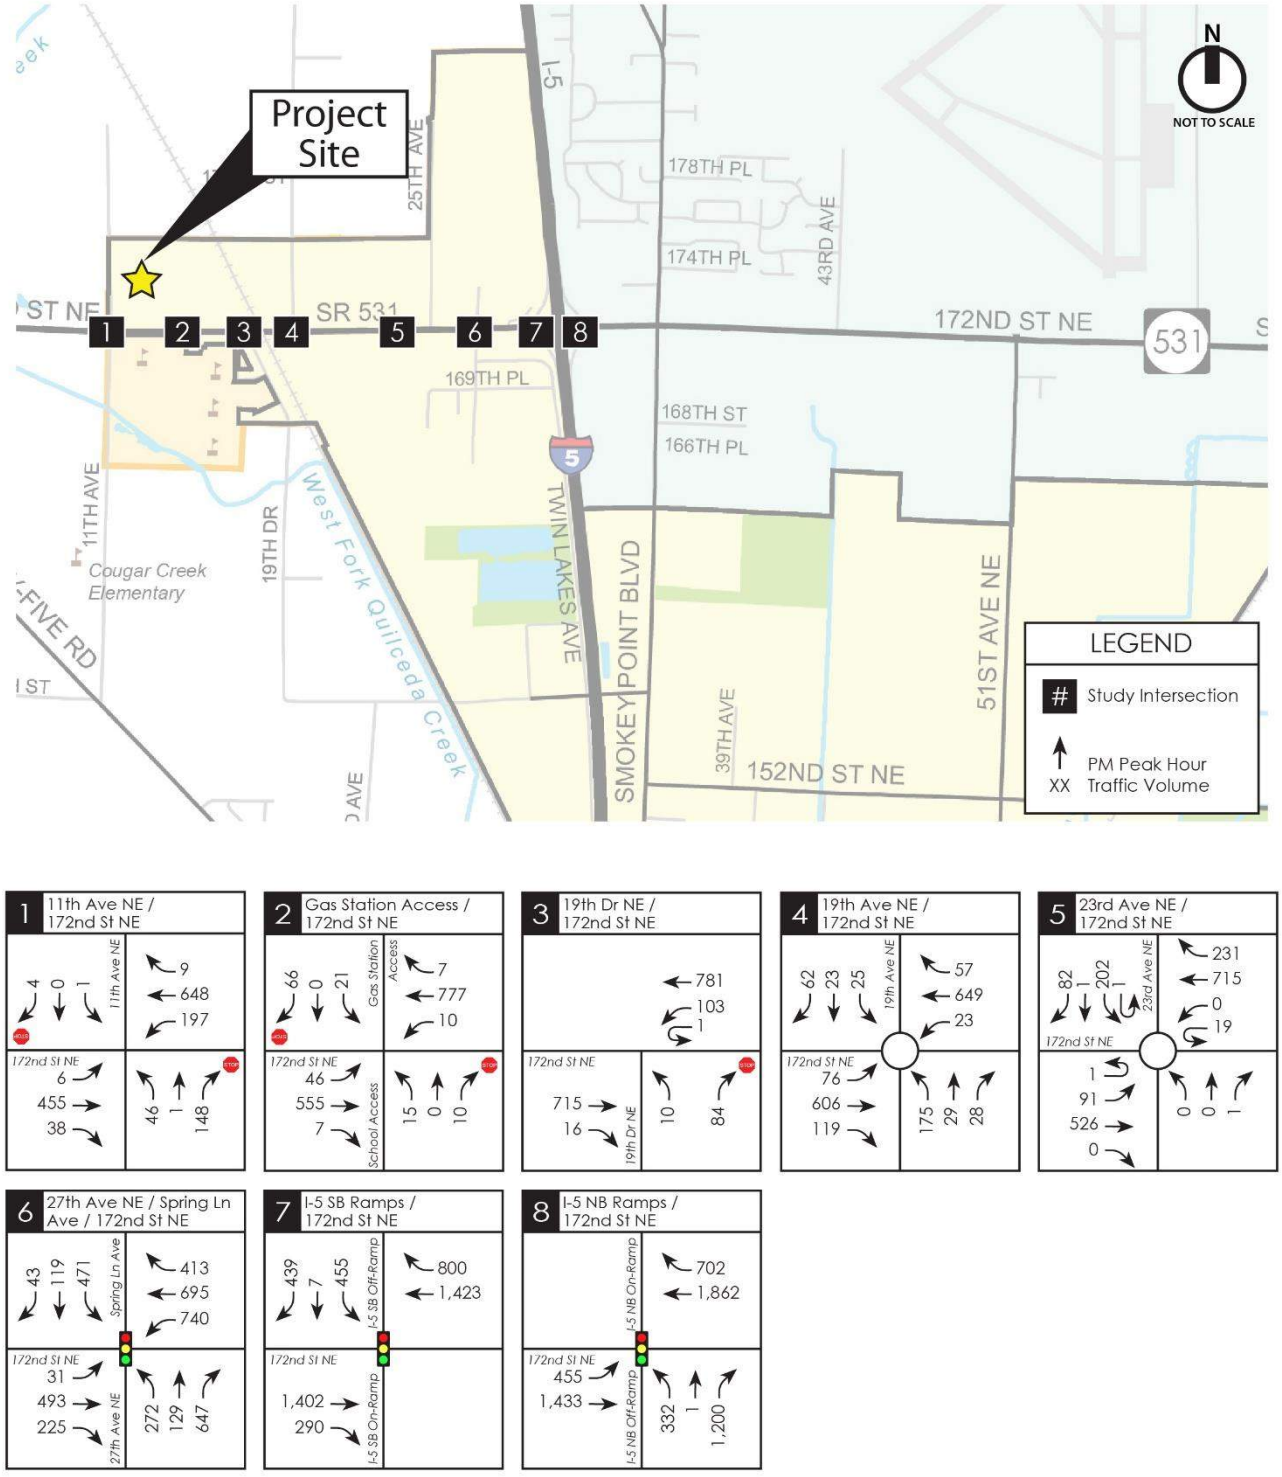

Figure 7: 2036 No Action Weekday PM Peak Hour Traffic Volumes (Horizon Year)

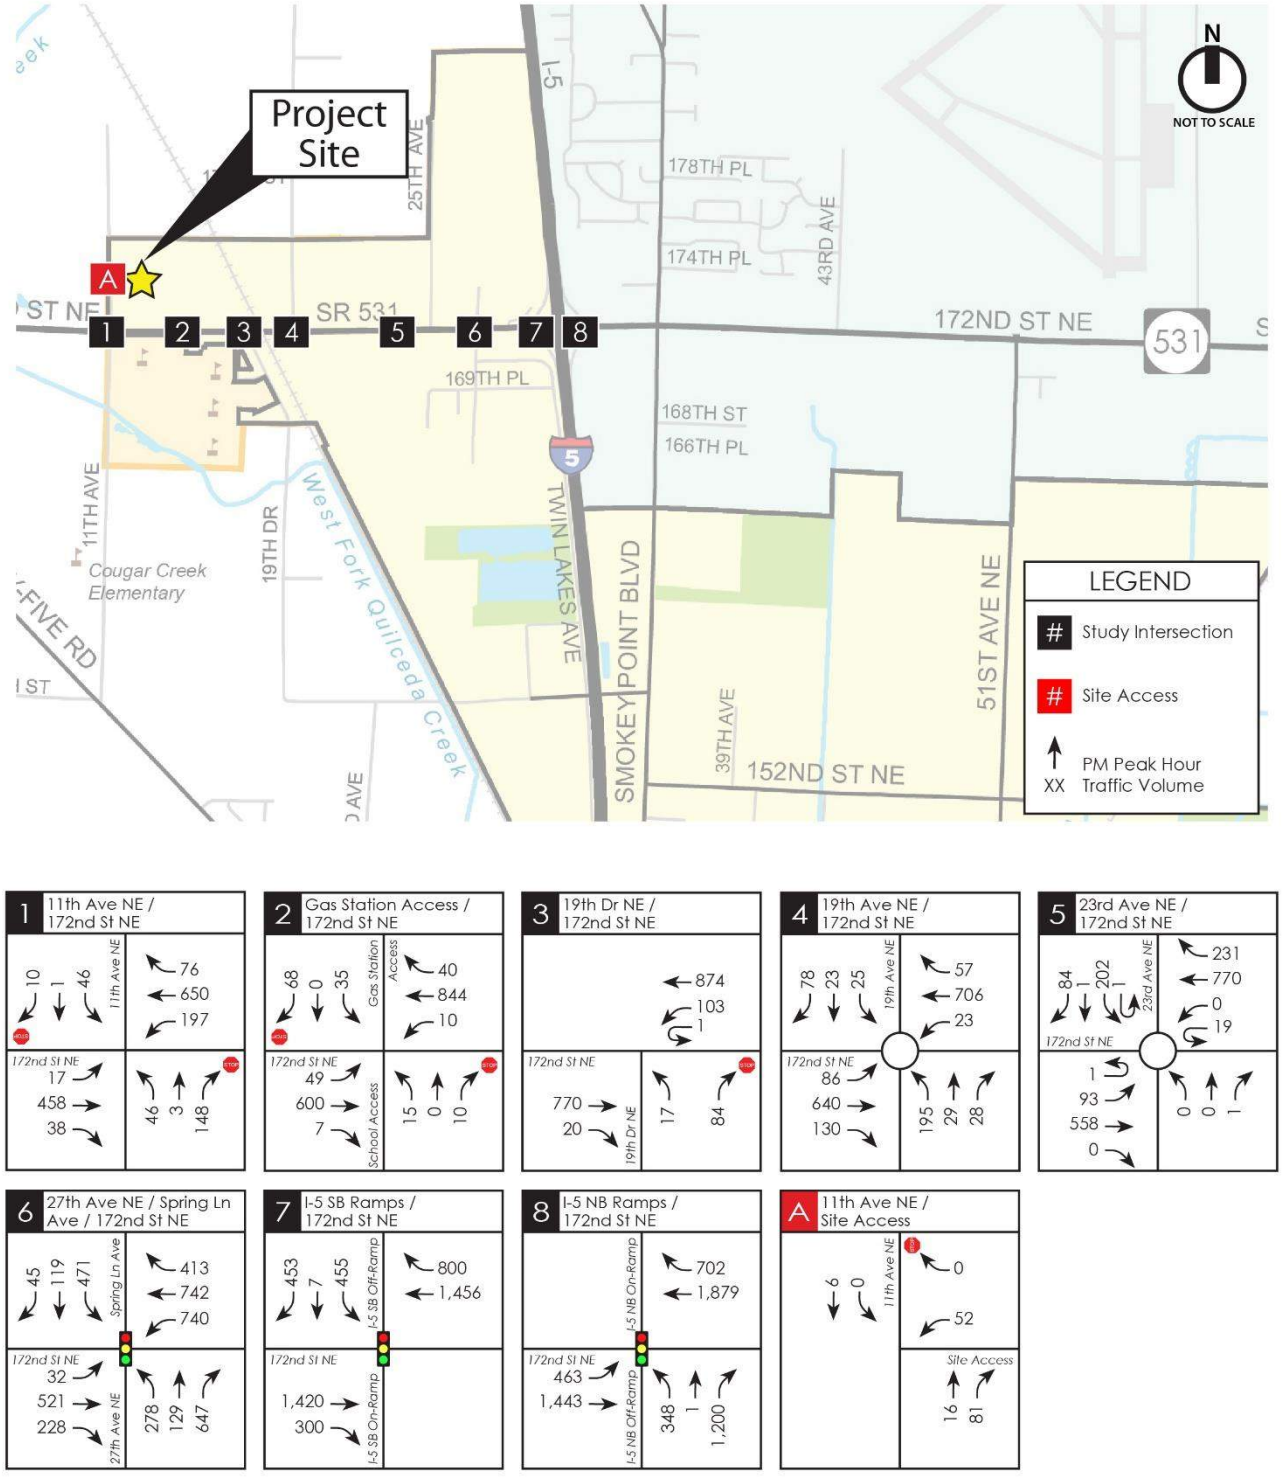

Figure 8: 2036 With Project Weekday PM Peak Hour Traffic Volumes (Horizon Year)

Intersection LOS Analysis

Future intersection LOS analyses during the weekday PM peak hour were evaluated at the eight (8) off-site study intersections for future year 2030 (buildout year) and 2036 (horizon year) conditions with and without the *Gemmer Residential* project. Off-site study intersections were identified based on the City of Marysville's *Traffic Impact Analysis Guidelines (June 2023),* and confirmed through the traffic scoping process. The signal timing data used at the off-site signalized study intersections were based on data provided by the City of Marysville and WSDOT.

The 2030 and 2036 roadway networks assumed in the future LOS analyses were based on existing intersection geometry, plus at least partial completion of the following City planned improvements, as noted below at each location:

- 172nd Street NE / 19th Avenue NE Roundabout – construct new roundabout at the 19th Avenue NE / 172nd Street NE intersection. (Marysville TIP Project #24)

  Note: this improvement is required as a condition of approval for the Lodge Apartments project. Therefore, this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios (when the 156th Street NE Interchange project is complete).

- 172nd Street NE from 27th Avenue NE to 19th Avenue NE – widen to a 4/5-lane section with pedestrian and bicycle facilities between 27th Avenue NE and 19th Avenue NE. (Marysville TIP 30)

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- 172nd Street NW from 11th Avenue NE to 19th Drive NE – widen to a 3-lane section with pedestrian and bicycle facilities between 19th Drive NE and 11th Avenue NE.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor but does not change roadway geometry at any of the off-site intersections. The Gemmer Residential project is anticipated to complete a portion of this project along it's project frontage.

- New 19th Avenue NE Extension – construct new 3-lane roadway between 156th Street NE and 172nd Street NE that would include pedestrian and bicycle facilities. (Marysville TIP #51)

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- 156th Street NE Interchange – convert the existing overcrossing to a full single-point urban interchange (SPUI) with Interstate 5. (Marysville TIP #61)

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios only.

The intersection LOS results are summarized in Tables 8 and 9 and detailed LOS worksheets are provided in Appendix D.

Table 7
2030 Buildout Year – Weekday PM Peak Hour LOS Summary

	No Action		With Project	
Study Intersection / Movement	LOS	Delay (sec)	LOS	Delay (sec)
Stop-Controlled Intersections:

Northbound Approach	C	19.4	C	23.6
Roundabouts:				
4) 19th Ave NE / 172nd St NE	A	5.7	A	6.1
5) 23rd Ave NE / 172nd St NE	A	4.7	A	4.7
Signalized Intersections:				
6) 27th Ave NE / 172nd St NE	E	67.3	E	65.8
7) I-5 SB / 172nd St NE	A	8.1	A	8.0
8) I-5 NB / 172nd St NE	C	26.7	C	28.7

The City of Marysville and WSDOT intersection LOS standard is LOS D with one exception. The City of Marysville *Traffic Impact Analysis Guidelines* state that WSDOT intersections on the 172nd Street NE (SR 531) corridor which have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E. This is the case at the intersection of 127th Ave NE/172nd Street NE. Therefore, as shown in Tables 7 and 8, all off-site study intersections are expected meet the applicable LOS standards during the weekday PM peak hour in year 2030 and 2036 without or with the proposed *Gemmer Residential* project with two (2) exceptions:

- 11th Ave NE / 172nd Street NE (LOS F in 2030 and 2036, without or with project): The City has identified a roundabout at this intersection in their transportation improvement plan (TIP #25). The *Gemmer Residential* project will construct a new single-lane roundabout (or a portion of a new roundabout) at this intersection as mitigation. As a single-lane roundabout, the intersection is anticipated to operate at LOS A in 2036 without or with the proposed project during the PM peak hour. Detailed 2036 No Action and With Project Mitigation LOS worksheets are included in Appendix D.

- 19th Ave NE / 172nd Street NE (LOS E in 2030, with project): The City has identified a roundabout at this intersection (TIP #24). The new roundabout is required as a condition of approval for the Lodge Apartments project. As such, this improvement is assumed to be completed by 2036 (when the 156th Street NE Interchange project is complete) and is expected to operate at LOS A in 2036 as a future roundabout, without or with the project. Therefore, no mitigation is proposed at this intersection with the *Gemmer Residential* project.

It should also be noted that the addition of project traffic to intersections #6 and #7 results in a decrease (improvement) in the overall average intersection delay during the weekday PM peak hour. This occurs because the *Gemmer Residential* project adds trips to non-critical movements (east and west through trips) instead of movements with higher levels of delay, which results in a decrease in the average delay for the entire intersection.

Site Access Evaluation

Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located south of the site. To evaluate the operations of the site access intersection on 11th Ave NE, a level of service (LOS) and queue analysis was completed. The weekday PM peak hour LOS and queue analysis at the site access intersection was based on the methodology outlined in the 7th Edition of the *Highway Capacity Manual* using *Synchro 12* software.

Table 10 summarizes the calculated LOS and the 95th percentile queues of the controlled movements at the site access intersection during the weekday PM peak hour in 2030 (buildout year) and 2036 (horizon year) with the proposed project. The reported 95th percentile queues represent a condition that is exceeded only 5 percent of the time. Detailed LOS and queue calculation worksheets are included in Appendix D.

Table 9
PM Peak Hour Site Access LOS and Queuing

	2030 With Project			2036 With Project		
Controlled Movements	LOS [1]	Delay	95th % Queue (ft)[3]	LOS [1]	Delay	95th % Queue (ft)[3]
A. 11th Ave NE / Site Access						
Westbound Approach	A	9.1	<25'	A	9.1	<25'
Southbound Left-Turn	A	0.0	0'	A	0.2	0'

1. LOS = Level of Service
2. Delay refers to average control delay expressed in seconds per vehicle.
3. Queues are 95th Percentile queues. <25' indicates 95th Percentile queue statistically less than 1 vehicle.

Snohomish County Key Intersections

In accordance with the *Snohomish County Traffic Worksheet and Traffic Study Requirements for Developments in the City of Marysville*, project trip impacts at Snohomish County key intersections were identified. Weekday AM and PM peak hour Trip Distribution and Assignment figures and tables were prepared consistent with these guidelines and are included in Appendix G.

MITIGATION

The following measures have been identified to mitigate traffic impacts of the proposed *Gemmer Residential* project.

City of Marysville Traffic Impact Fees. The City of Marysville requires payment of transportation impact fees to help fund planned roadway improvements throughout the City. Transportation impact fees for the proposed *Gemmer Residential* project were calculated based on the trip generation estimate documented in this TIA and the City of Marysville's currently adopted transportation impact fee rate of $6,300 per PM peak hour trip.

The proposed *Gemmer Residential* project is estimated to generate 184 net new PM peak hour trips. As a result, the estimated City of Marysville transportation impact fee is **$1,159,200** ($6,300 X 184 PM peak hour trips). Actual impact fees will be calculated by the City at the time of building permit issuance.

Snohomish County Mitigation. The City of Marysville and Snohomish County have adopted an interlocal agreement whereby developments in Marysville must assess potential mitigation for impacts on Snohomish County roadway facilities. Mitigation fees to Snohomish County are based on predetermined distribution percentages according to location or specific project impacts to planned roadway improvements. A mitigation offer form to Snohomish County will be submitted separately and is included in **Appendix H**.

Future City Road Plans. The *Gemmer Residential* project would build a portion of the following City planned roadway improvements:

- Construct and dedicate right-of-way for the northern half-street of a 3-lane section on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. Construct frontage improvements including new curb, gutter, sidewalk, and street lighting on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. It should be noted that it is anticipated the applicant would receive transportation impact fee credit for frontage and roadway improvements on 172nd Street NE.
- Construct frontage improvements on 11th Ave NE from 172nd Street NE to the northern site property line including new curb, gutter, sidewalk, and street lighting.
- Construct a new roundabout (or a portion of a new roundabout) at 11th Ave NE / 172nd Street NE. Credit toward City transportation impact fees is expected with the anticipated addition of this roundabout to the next adoption of the City's six-year TIP in 2024.

LOS, Queue, and V/C Calculations

Level of Service Methodology

Level of Service (LOS) generally refers to the degree of congestion at an intersection. It is a measure of vehicle operating speed, travel time, travel delays, and driving comfort. A letter scale from A to F generally describes intersection LOS.

Signalized Intersection LOS represents the average control delay (sec/veh) and can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only). The table below outlines the HCM (7th Edition) LOS criteria for signalized intersections.

LOS Criteria for Signalized Intersections [1]

Control Delay (sec/veh)	Level of Service [2]	General Description [3]
≤ 10	A	Exceptionally Favorable Progression (or very short cycle lengths) – Most vehicles arrive during the green indication and travel through the intersection without stopping.
> 10 to ≤ 20	B	Highly Favorable Progression (or short cycle lengths) – While more vehicles than LOS A stop, most vehicles still pass through the intersection without stopping.
> 20 to ≤ 35	C	Favorable Progression (or moderate cycle lengths) – Individual cycle failures begin to appear, but many vehicles still pass through the intersection without stopping.
> 35 to ≤ 55	D	Ineffective Progression (or long cycle lengths) – Many vehicles stop and individual cycle failures are noticeable.
> 55 to ≤ 80	E	Unfavorable Progression (and long cycle lengths) – Individual cycle failures are frequent.
> 80	F	Very Poor Progression (and long cycle lengths) – Most cycles fail to clear the queue at this level.

1 Source: Highway Capacity Manual 7th Edition, Transportation Research Board, 2022.
2 If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0, LOS F is assigned to the individual lane group. For approach-based and intersection-wide assessments at signals, LOS is defined solely by control delay.
3 Individual cycle failures: one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle.

Synchro 12 and/or HCM 2000 LOS methodology may be used when HCM 7th Edition methodology is not supported at an intersection (i.e., intersection geometry and/or custom phasing) or jurisdictional standards require use of an alternative methodology.

Unsignalized Intersection LOS (two-way stop control, all-way stop control, and roundabouts) is based on the average control delay. For two-way stop-controlled intersections, the LOS criteria apply to each controlled minor-street approach, controlled minor-street lane group, and controlled major-street movement (additional v/c ratio criteria apply to lane group LOS only). LOS is not calculated for major-street approaches or for the intersection as a whole at two-way stop-controlled intersections. For all-way stop-controlled intersections and roundabouts, LOS can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only). The table below outlines the HCM (7th Edition) LOS criteria for unsignalized intersections based on these methodologies.

LOS Criteria for Unsignalized Intersections[1]

Control Delay (sec/veh)	Level of Service [2]
≤ 10	A
> 10 to ≤ 15	B
> 15 to ≤ 25	C
> 25 to ≤ 35	D
> 35 to ≤ 50	E
> 50	F

1 Source: Highway Capacity Manual 7th Edition, Transportation Research Board, 2022.
2 If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0, LOS F is assigned to the individual lane group. For approach-based and intersection-wide assessments at unsignalized intersections, LOS is defined solely by control delay.

Traffic Mitigation Offer to Snohomish County

The applicant completes part one and submits it to the City with a completed county traffic worksheet. The City completes part two and sends it to the County. The County completes part three and sends it back to the City.

Part One to be completed by Applicant

Basic Development Information

Name of City in which development is located Marysville

Name of Proposed Development Gemmer Residential

City Project File Number (if known)

Name of Applicant MJS Investors

Address of Applicant 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

Proportionate Share Calculation: *Choose Option A or B*

☒ Option A: Based on a percentage of the County's adopted impact fee (attach traffic worksheet.)

1. The applicable percentage of the County's fee: 20 %
2. Net New Average Daily Traffic: 1,762 ADT
3. The adopted County impact fee for this development: 185 $/ADT
4. Total Proportionate Share Amount: $ 65,194

☐ Option B: Based on a comprehensive traffic study (attach traffic worksheet and traffic study)

_____ No road improvements are impacted. Hence, proportionate share amount is zero ($0).

_____ The following road improvements are impacted. The calculation of proportionate shares is summarized below.

List by Names/Description the Impacted County Projects (attach other pages if necessary)	County Project ID#	PHTs Impacting Project	Capacity Cost per PHT	Proportionate Share Obligation per Impacted Project
1.				
2.				
3.				
4. Total Proportionate Share Amount (sum of obligations for each impacted project)				$

☒ **Trip Distribution and Assignment if required**

If required, attach AM and PM peak-hour trip distribution and assignment. Attach traffic worksheet showing whether or not it is required and traffic study.

☒ **Mitigation of other impacts if required for developments generating more than 50 Peak-Hour Trips**

Mitigation of Impacts on Level of Service

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

Mitigation of Impacts on Inadequate Road Conditions

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

Mitigation for Impacts on Access or Circulation

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

☒ **Written Offer**

The Applicant hereby voluntarily agrees to pay the total proportionate share amount shown above for impacts of the proposed development on the capacity of Snohomish County roads and provide mitigation of all other impacts as indicated above and described in attached documents.

BY: _____ Date: 11/15/23

Signature by Authorized Official of Applicant or Authorized Representative

Print Name and Title Rob Risinger

Instructions to Applicant. Submit this Offer, a completed county traffic worksheet, and any other attachments to the City with your initial application or send directly to Contact.pwCMS@snoco.org.

Traffic Mitigation Offer to Snohomish County

The applicant completes part one and submits it to the City with a completed county traffic worksheet. The City completes part two and sends it to the County. The County completes part three and sends it back to the City.

Snohomish County Mitigation Request to City

Snohomish County has reviewed the traffic study worksheet and mitigation offer submitted by the applicant and has determined as follows:

☐ Snohomish County requests that the City impose the mitigation offered above as a condition of approval for the Development. Snohomish County agrees to accept changes in the mitigation payment amount shown above resulting from TDM or lot-yield adjustments approved by the City.

☐ Snohomish County requests that the City require additional supplemental information to adequately evaluate the proposed development's impacts.

☐ The information requested is shown in the notes below.

Attachment G2: Weekday PM Peak Hour Project Trip Distribution & Assignment

Snohomish County Traffic Worksheet and Traffic Study Requirements for Developments in the City of Marysville

Snohomish County government, through an interlocal agreement (ILA) with the City of Marysville, may request traffic mitigation measures from any new development in the city that impacts roads in the unincorporated county. The City will impose the requested mitigation to the extent that the City determines that the mitigation is reasonably related to the impacts of the development. To determine the impacts, and to determine reasonable mitigation measures, the City of Marysville requires a traffic study from any development in the city that may have impacts on county roads. This 'traffic study' may be as simple as completing sections one and two of the county traffic worksheet below, or having a professional traffic engineer conduct a formal traffic study consistent with the requirements in section three below.

- If a development generates less than ten peak-hour trips and the applicant chooses Option A for mitigation payment (standard payment by percent of county impact fee), then the applicant will generally only have to fill out the first two sections of this traffic worksheet and complete a mitigation offer (see section four).
- However, if a development generates more than ten peak-hour trips, or if the applicant chooses Option B for mitigation payment (comprehensive impact analysis), then the applicant will have to fill out the first section of this worksheet, complete a separate traffic study consistent with the requirements in section three, and complete a mitigation offer (see Section Four).
- Applicants should submit all documents *to the City* as part of their initial submittal.
- Traffic study requirements for impacts on county roads are based on the County's traffic mitigation ordinance (Chapter 30.66B) and the city/county ILA. At the end of this document find references to the county contacts and county web site (sources for may of the documents related to traffic mitigation).
- Following review of the documents submitted, the County may request supplemental information and analysis as necessary to determine the impacts of the development in accordance with the city/county ILA. The City will require the proposed development to submit the supplemental information and analysis to the extent that the City determines that it is necessary to determine the impacts of the development.

Section One (1) Worksheet General Information

1. Name of Proposed Development Gemmer Residential

   City Development File Number (if known)_____

2. Name, Address and Phone Number of Applicant_____

   MJS Investors, 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

   Phone #: 425-417-6004

3. Development Site Address 1507 172nd Street NE, Marysville, WA

4. Is it a residential or commercial development? Yes (residential)

5. Description of Development (size and specific type)_____
   The proposed project will include up to 185 Single-Family Detached Homes. The site includes 1 existing Single-Family Detached Home that would be removed with the project.

6. How many new vehicle trips are expected to be generated by the proposed development? (For many common types of developments this information can be provided by the city or the county. For more complex developments trip generation may have to be determined under section three below)

   129 AM Peak Hour 184 PM Peak Hour 1,762 Average Daily Trips (ADT)

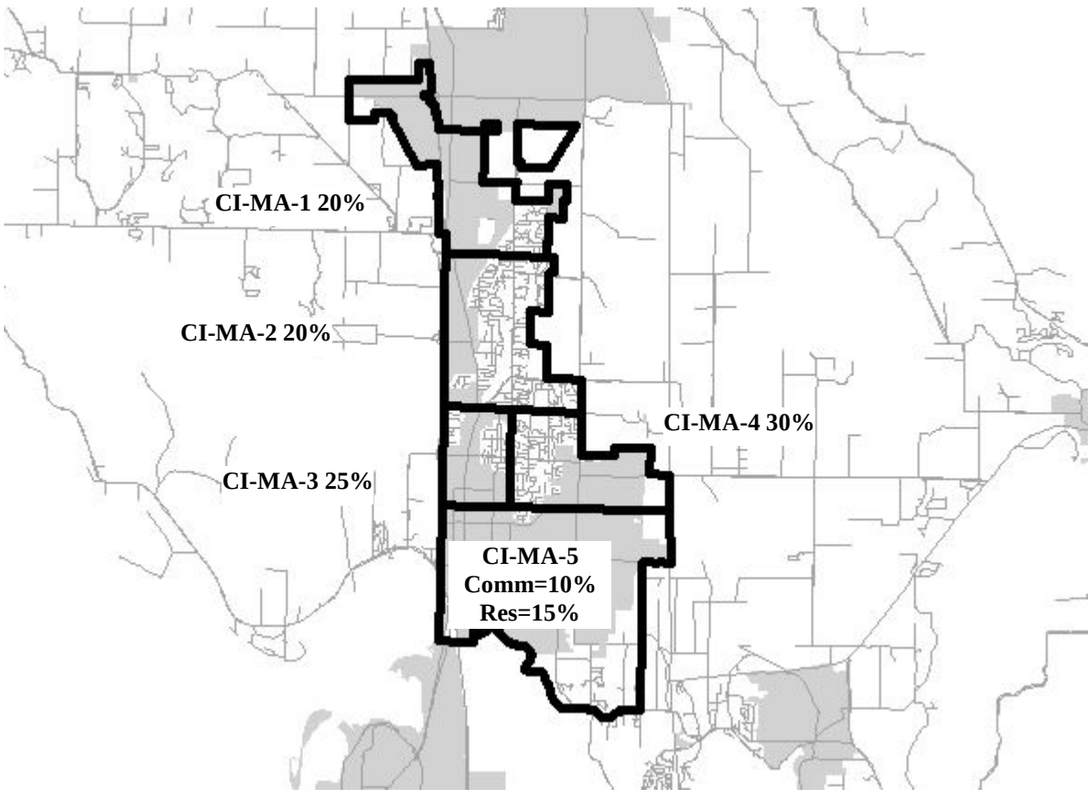
7. Proportionate Share Impact Mitigation: All applicants have two options in determining the amount of their traffic mitigation payment:

   x For determining the amount based on a percentage of the county fee go to section two.

   _____ For determining the amount based on a comprehensive traffic study go to section three.

Section Two (2) Proportionate Share Determined by Percentage of County Impact Fee

2(a) Calculation of Payment Amount



1. Standard default estimated percentage of trips impacting the City streets based on subareas (See below) 20 %

or

2. Other Percentage: (Note: See author's qualifications in section three below.) Estimated percentage of trips impacting county roads from attached trip distribution: _____ %

Sub-Area ID #	* City Subarea Description	Residential Developments	Commercial Developments
CI-MA-1	North of 136th ST SE.	20%	20%
CI-MA-2	North of 100th ST NE and South of 136th ST SE.	20%	20%
CI-MA-3	North of 76th ST NE, South of 100th ST SE, and West of 51st AV NE.	25%	25%
CI-MA-4	North of 76th ST NE, South of 100th ST SE, and East of 51st AV NE.	30%	30%
CI-MA-5	South of 76th ST NE.	15%	10%

* Note: Boundaries are either street centerlines or imaginary extensions of street centerlines in places where the actual streets do not exist.

3. Development New Average Daily Trip Generation (ADT) 1,762

4. Type of Development (Residential or Commercial) Residential

5. County Commercial Fee Rate $_____ 6. County Residential Fee Rate $ 185

(Note: Consistent with county code and the ILA, developments pay the rate in effect at the time of their submittal. As of 07/13/11 the rates were $39 for commercial developments and $46 for residential developments. Through ordinance, the County Council can change these rates at any time, so consult with the County or look at Snohomish County Code 30.66B.330 to find the latest fee rates.)

7. Calculation of Proportionate Share Impact Mitigation

20%	×	1,762	×	185	=	$ 65,194
#1 or #2 above: % of trips		#3 above: ADT		#5 or #6 above: Fee Rate		proportionate share mitigating payment

2(b) Determining whether or not an additional traffic study is necessary

Will the development generate more than 10 peak-hour trips *or* are there other impacts that need to be addressed (e.g., level of service, safety, or access and circulation)

_____ No. Skip section three and go to section four.

__X__ Yes. Read the introduction to section three and skip to section 3(b).

Section Three (3) Traffic Study Requirements

Introduction: This section outlines requirements for traffic studies for impacts on County roads. If an applicant chooses (or is required) to complete a traffic study, then it should be submitted along with this worksheet and a mitigation offer. (Note on Author's Qualifications: A traffic study under this section must be conducted by an engineer licensed to practice in the state of Washington with special training and experience in traffic engineering and, preferably, membership in the institute of transportation engineers. For individuals/firms not on the City's approved list, the developer will provide, with the traffic study, the credentials of the individual or firm performing the traffic study certifying compliance with these qualifications.)

3(a) Proportionate share impact mitigation based on comprehensive traffic study

1. Development's Trip Generation and Distribution. Determine the PM peak-hour trip generation and distribution for the development consistent with Section 3(b) below.
2. Impacted Improvements. Determine which of the road sections with planned improvements in the county's impact fee cost basis (Transportation Needs Report Appendix D) are impacted by three or more development-generated *directional* PM peak hour trips (PM PHT).
3. Current Counts. For each impacted improvement, provide current traffic counts to determine the PM PHT.
4. Reserve Capacity. Determine "reserve capacity" for each impacted improvement by subtracting the current PM PHT from the maximum service volume (MSV) for the existing facility. Reserve capacity is set to zero if current PM PHT exceeds the MSV. For MSVs see County DPW Rule 4224.
5. New Capacity. New capacity is the incremental increase in PHT that could be accommodated with the planned improvement. Determine the new capacity of each impacted improvement by subtracting the current MSV from the future MSV after the improvement.
6. Chargeable Capacity. For each impacted improvement, add the reserve capacity to the new capacity.
7. Final Adjusted Cost. Find the cost of each impacted improvement and make any adjustments used by the County for tax credits (see Transportation Needs Report Appendix D).
8. Capacity Cost per Peak-Hour Trip. For each impacted improvement, determine the capacity cost per PM PHT by dividing the final adjusted improvement cost by the chargeable capacity.
9. Traffic Impacts. From step one above, take the *total* number of PM PHT (in both directions) impacting each planned improvement.
10. Proportionate Share. For each impacted improvement, determine the proportionate share impact mitigation by multiplying the capacity cost per peak-hour trip by the number of PM PHT impacting the improvement.

3(b) Trip Generation and AM and PM Peak Hour Trip Distribution and Assignment

Calculate AM, PM and Daily trip generation consistent with the ITE Trip Generation Handbook and Snohomish County Public Works Rule 4220. Determine the trip distribution and assignments consistent with the County's document titled "Format for Trip Distributions"(available at County web site, see below).

- Within the developments transportation service area (TSA) the distributions will be carried out to each key intersection at which the approach or departure volumes on any leg have three (3) or more peak hour trips. Get the most current list of key intersections on the web site described below. Trips should be distributed onto the road system as it is expected to be in six years.
- The distribution should be a schematic map showing the broad distributions of trips in terms of percentages on different roads. Show all City boundaries.
- The assignment should be a schematic map with the impacted key intersections identified by ID# and turning movements for each shown in separate diagrams on the same page or on different pages. The assignment should also be presented in tabular form listing each intersection by intersection ID#, and the number of trips at each movement.

3(c) Additional Analysis for Developments Generating More Than Fifty (50) Peak Hour Trips

For large developments (i.e., those generating more than 50 peak-hour trips), the County may request mitigation for impacts on the level of service of County roads, documented safety locations (the County calls such locations "inadequate road conditions" or "IRCs"), and access or circulation. The traffic study requirements below are intended to disclose impacts. Based on this information the County may request through the City that the applicant provide additional information showing possible mitigation measures. If any off-site improvements were needed for mitigation the County would work with the applicant to determine requirements for right-of-way, construction plans, right-of-way use permits, construction/maintenance bonds, and other issues.

Impacts on Level of Service (LOS) of County Arterials

Contact Snohomish County Public Works for the most current list of arterial units in arrears and critical arterial units. Identify any arterial units in arrears or critical arterial units impacted by three or more directional peak-hour trips.

Impacts on Inadequate Road Conditions

Contact Snohomish County Public Works for a list of the current IRCs. Identify any IRCs impacted by three or more peak-hour trips. Note: Unlike LOS impacts in which at least three or more peak hour trips have to be added in one direction to require disclosure (e.g., 3 westbound), for IRCs, any three peak hour trips added to IRC locations are considered an impact for which disclosure is necessary (e.g., 2 westbound plus 1 eastbound).

Impacts on Access or Circulation

The County may request improvements to existing roads to provide safe and efficient access and/or circulation. In some instances, the County may request provisions for future County roads identified in the Comprehensive Plan or in Small Area Transportation Studies. If so, the County will request specific additional information through the City.

Section Four (4) Traffic Mitigation Offer to Snohomish County

The applicant should complete a traffic mitigation offer to Snohomish County that summarizes the mitigation identified in the county traffic worksheet and any additional traffic study. This will facilitate timely review of the development and processing of the application. The form to use for the mitigation offer is titled "Traffic Mitigation Offer to Snohomish County." This form is typically provided to all applicants along with this traffic study checklist. In addition, copies are available from the county contacts or the Snohomish County web site shown below.

Additional Information

County Web Site

Snohomish County Public Works has a web site with many documents related to traffic studies and mitigation requirements for developers. From the Snohomish County Home Page go to:

RE: Geotechnical Evaluation
Proposed Residential Development
Parcel No.'s 31051900400900 and 31051900401100
1125 and 1507 172nd Street NE
Marysville, Washington

In accordance with your authorization, Cobalt Geosciences, LLC has prepared this report to discuss the results of our geotechnical evaluation at the referenced site.

The purpose of our evaluation was to provide recommendations for foundation design, grading, and earthwork.

Site Description

The site is located at 1125 and 1507 172nd Street NE in Marysville, Washington. The site consists of two irregularly shaped parcels (Parcel No.'s 310519004011100 and 31051900400900) with a total area of about 35 acres.

The southern portions of both parcels are locally developed with residential and commercial structures and driveway areas. The remainder of the property is undeveloped and vegetated with grasses, ferns, ivy, blackberry vines, and variable diameter trees.

The site includes level and slightly sloping areas with relief of about 35 feet. The overall area slopes downward to the east. There are numerous graded areas with likely fill zones throughout the central portion of the site. Fill thicknesses appear to be generally less than 4 feet.

The site is bordered to the east by land and right-of-way, to the south by commercial and residential properties and 172nd Street NE, to the east by 11th Avenue NE and to the north by land.

The proposed development includes numerous residential lots (about 182), open spaces, access roadways, stormwater systems, and utilities. Figure 1 shows the proposed site layout.

Initial site work could include tree removal and temporary roadway construction for tree removal.

Stormwater will include infiltration or other systems depending on feasibility. Site grading may include cuts and fills of 15 feet or less for mass grading and cuts and/fill of 3 feet or less for foundation placement. Foundation loads are expected to be light. We should be provided with the final plans to verify that our recommendations remain valid and do not require updating.

Area Geology

The Geologic Map of the Arlington West Quadrangle, indicates that the site is underlain by Vashon Glacial Till.

Vashon Glacial Till includes mixtures of silt, sand, clay, and gravel. These materials are usually impermeable and are typically dense to very dense below a weathered zone.

Soil & Groundwater Conditions

As part of our evaluation, we excavated six test pits and four hand borings within the property, where accessible.

All of the explorations encountered approximately 6 inches of topsoil and vegetation underlain by approximately 1.5 to 3 feet of loose to medium dense, silty-fine to medium grained sand trace to with gravel (Weathered Glacial Till). These materials were underlain by dense to very dense, silty-fine to fine grained sand trace gravel (Vashon Glacial Till), which continued to the termination depths of these explorations. The till was partially to well cemented.

Groundwater was encountered in all of the explorations between about 1.5 and 3.75 feet below grade. Groundwater is consistent with interflow at the base of the weathered glacial till. This zone is relatively thin and volumes were generally light. Groundwater will likely be present between December and March of a typical year.

Water table elevations often fluctuate over time. The groundwater level will depend on a variety of factors that may include seasonal precipitation, irrigation, land use, climatic conditions and soil permeability. Water levels at the time of the field investigation may be different from those encountered during the construction phase of the project.

Erosion Hazard

The Natural Resources Conservation Services (NRCS) maps for Snohomish County indicate that the site is underlain by Alderwood gravelly sandy loam (0 to 8 percent slopes), Alderwood-Everett gravelly sandy loams (25 to 70 percent slopes) and Kitsap silt loam (0 to 8 percent slopes). These soils would have a slight to moderate erosion potential in a disturbed state depending on the slope magnitude.

It is our opinion that soil erosion potential at this project site can be reduced through landscaping and surface water runoff control. Typically, erosion of exposed soils will be most noticeable during periods of rainfall and may be controlled by the use of normal temporary erosion control measures, such as silt fences, hay bales, mulching, control ditches and diversion trenches. The typical wet weather season, with regard to site grading, is from October 31st to April 1st. Erosion control measures should be in place before the onset of wet weather.

Seismic Hazard

The overall subsurface profile corresponds to a Site Class *D* as defined by Table 1613.5.2 of the International Building Code (IBC). A Site Class *D* applies to an overall profile consisting of stiff/medium dense soils within the upper 100 feet.

We referenced the U.S. Geological Survey (USGS) Earthquake Hazards Program Website to obtain values for S_S, S_1, F_a, and F_v. The USGS website includes the most updated published data on seismic conditions. The following tables provide seismic parameters from the USGS web site with referenced parameters from ASCE 7-10 and 7-16.

Seismic Design Parameters (ASCE 7-10)

Site Class	Spectral Acceleration at 0.2 sec. (g)	Spectral Acceleration at 1.0 sec. (g)	Site Coefficients		Design Spectral Response Parameters		Design PGA
			F_a	F_v	S_{DS}	S_{D1}	
D	1.10.3	0.43	1.059	1.57	0.778	0.45	0.443

Seismic Design Parameters (ASCE 7-16)

Site Class	Spectral Acceleration at 0.2 sec. (g)	Spectral Acceleration at 1.0 sec. (g)	Site Coefficients		Design Spectral Response Parameters		Design PGA
			F_a	F_v	S_{DS}	S_{D1}	
D	1.084	0.387	1.066	Null	0.771	Null	0.459

Additional seismic considerations include liquefaction potential and amplification of ground motions by soft/loose soil deposits. The liquefaction potential is highest for loose sand with a high groundwater table. The site has a low likelihood of liquefaction. For items listed as "Null" see Section 11.4.8 of the ASCE.

Conclusions and Recommendations

General

The site is underlain by weathered and unweathered glacial till which becomes denser with depth. There are likely areas of fill throughout the property where prior grading has taken place.

The proposed residential structures may be supported on shallow foundation systems bearing on medium dense or firmer native soils or on structural fill placed on the native soils. Local overexcavation or recompaction of loose weathered native soils may be necessary depending on the proposed elevations and locations of the new footings.

We anticipate that stormwater runoff will be managed through detention systems with possible rain gardens, bioretention, dispersion, and permeable pavements. We can provide additional input upon request and once detailed plans are prepared.

Site Preparation

Trees, shrubs and other vegetation should be removed prior to stripping of surficial organic-rich soil and fill. Based on observations from the site investigation program, it is anticipated that the stripping depth will be 6 to 18 inches. Deeper excavations will be necessary below large trees and below foundation systems, and in areas with fill.

The native soils consist of silty-sand with gravel. Most of the native soils may be used as structural fill provided they achieve compaction requirements and are within 3 percent of the optimum moisture. Some of these soils may only be suitable for use as fill during the summer months, as they will be above the optimum moisture levels in their current state. These soils are variably moisture sensitive and may degrade during periods of wet weather and under equipment traffic.

Imported structural fill should consist of a sand and gravel mixture with a maximum grain size of 3 inches and less than 5 percent fines (material passing the U.S. Standard No. 200 Sieve). Structural fill should be placed in maximum lift thicknesses of 12 inches and should be compacted to a minimum of 95 percent of the modified proctor maximum dry density, as determined by the ASTM D 1557 test method.

Temporary Excavations

Based on our understanding of the project, we anticipate that the grading could include local cuts on the order of approximately 3 feet or less for foundation and most of the utility placement. Any deeper temporary excavations should be sloped no steeper than 1.5H:1V (Horizontal:Vertical) in loose native soils and fill, 1H:1V in medium dense native soils and 3/4H:1V in dense to very dense native soils. If an excavation is subject to heavy vibration or surcharge loads, we recommend that the excavations be sloped no steeper than 2H:1V, where room permits.

Temporary cuts should be in accordance with the Washington Administrative Code (WAC) Part N, Excavation, Trenching, and Shoring. Temporary slopes should be visually inspected daily by a qualified person during construction activities and the inspections should be documented in daily reports. The contractor is responsible for maintaining the stability of the temporary cut slopes and reducing slope erosion during construction.

Temporary cut slopes should be covered with visqueen to help reduce erosion during wet weather, and the slopes should be closely monitored until the permanent retaining systems or slope configurations are complete. Materials should not be stored or equipment operated within 10 feet of the top of any temporary cut slope.

Soil conditions may not be completely known from the geotechnical investigation. In the case of temporary cuts, the existing soil conditions may not be completely revealed until the excavation work exposes the soil. Typically, as excavation work progresses the maximum inclination of temporary slopes will need to be re-evaluated by the geotechnical engineer so that supplemental recommendations can be made. Soil and groundwater conditions can be highly variable. Scheduling for soil work will need to be adjustable, to deal with unanticipated conditions, so that the project can proceed and required deadlines can be met.

If any variations or undesirable conditions are encountered during construction, we should be notified so that supplemental recommendations can be made. If room constraints or groundwater conditions do not permit temporary slopes to be cut to the maximum angles allowed by the WAC, temporary shoring systems may be required. The contractor should be responsible for developing temporary shoring systems, if needed. We recommend that Cobalt Geosciences and the project structural engineer review temporary shoring designs prior to installation, to verify the suitability of the proposed systems.

Foundation Design

The proposed structures may be supported on shallow spread footing foundation systems bearing on undisturbed dense or firmer native soils or on properly compacted structural fill placed on the suitable native soils. Any undocumented fill and/or loose native soils should be removed and replaced with structural fill below foundation elements. Structural fill below footings should consist of clean angular rock 5/8 to 4 inches in size. We should verify soil conditions during foundation excavation work.

For shallow foundation support, we recommend widths of at least 16 and 24 inches, respectively, for continuous wall and isolated column footings supporting the proposed structure. Provided that the footings are supported as recommended above, a net allowable bearing pressure of 2,500 pounds per square foot (psf) may be used for design. Detention vaults set at least 5 feet below grade may be designed using a bearing pressure of 5,000 psf.

A 1/3 increase in the above value may be used for short duration loads, such as those imposed by wind and seismic events. Structural fill placed on bearing, native subgrade should be compacted to at least 95 percent of the maximum dry density based on ASTM Test Method D1557. Footing excavations should be inspected to verify that the foundations will bear on suitable material.

Exterior footings should have a minimum depth of 18 inches below pad subgrade (soil grade) or adjacent exterior grade, whichever is lower. Interior footings should have a minimum depth of 12 inches below pad subgrade (soil grade) or adjacent exterior grade, whichever is lower.

If constructed as recommended, the total foundation settlement is not expected to exceed 1 inch. Differential settlement, along a 25-foot exterior wall footing, or between adjoining column footings, should be less than ½ inch. This translates to an angular distortion of 0.002. Most settlement is expected to occur during construction, as the loads are applied. However, additional post-construction settlement may occur if the foundation soils are flooded or saturated. All footing excavations should be observed by a qualified geotechnical consultant.

Resistance to lateral footing displacement can be determined using an allowable friction factor of 0.40 acting between the base of foundations and the supporting subgrades. Lateral resistance for footings can also be developed using an allowable equivalent fluid passive pressure of 225 pounds per cubic foot (pcf) acting against the appropriate vertical footing faces (neglect the upper 12 inches below grade in exterior areas). The frictional and passive resistance of the soil may be combined without reduction in determining the total lateral resistance.

Care should be taken to prevent wetting or drying of the bearing materials during construction. Any extremely wet or dry materials, or any loose or disturbed materials at the bottom of the footing excavations, should be removed prior to placing concrete. The potential for wetting or drying of the bearing materials can be reduced by pouring concrete as soon as possible after completing the footing excavation and evaluating the bearing surface by the geotechnical engineer or his representative.

Concrete Retaining Walls

The following table, titled **Wall Design Criteria**, presents the recommended soil related design parameters for retaining walls with a level backslope. Contact Cobalt if an alternate retaining wall system is used. This has been included for new cast in place walls.

Wall Design Criteria	
"At-rest" Conditions (Lateral Earth Pressure – EFD+)	55 pcf (Equivalent Fluid Density)
"Active" Conditions (Lateral Earth Pressure – EFD+)	35 pcf (Equivalent Fluid Density)
Seismic Increase for "At-rest" Conditions (Lateral Earth Pressure)	18H* (Uniform Distribution) 1 in 2,500 year event
Seismic Increase for "At-rest" Conditions (Lateral Earth Pressure)	12H* (Uniform Distribution) 1 in 500 year event
Seismic Increase for "Active" Conditions (Lateral Earth Pressure)	6H* (Uniform Distribution)
Passive Earth Pressure on Low Side of Wall (Allowable, includes F.S. = 1.5)	Neglect upper 2 feet, then 275 pcf EFD+
Soil-Footing Coefficient of Sliding Friction (Allowable; includes F.S. = 1.5)	0.40

*H is the height of the wall; Increase based on one in 500 year seismic event (10 percent probability of being exceeded in 50 years),
+EFD – Equivalent Fluid Density

The stated lateral earth pressures do not include the effects of hydrostatic pressure generated by water accumulation behind the retaining walls. Uniform horizontal lateral active and at-rest pressures on the retaining walls from vertical surcharges behind the wall may be calculated using active and at-rest lateral earth pressure coefficients of 0.3 and 0.5, respectively. A soil unit weight of 125 pcf may be used to calculate vertical earth surcharges.

To reduce the potential for the buildup of water pressure against the walls, continuous footing drains (with cleanouts) should be provided at the bases of the walls. The footing drains should consist of a minimum 4-inch diameter perforated pipe, sloped to drain, with perforations placed down and enveloped by a minimum 6 inches of pea gravel in all directions.

The backfill adjacent to and extending a lateral distance behind the walls at least 2 feet should consist of free-draining granular material. All free draining backfill should contain less than 3 percent fines (passing the U.S. Standard No. 200 Sieve) based upon the fraction passing the U.S. Standard No. 4 Sieve with at least 30 percent of the material being retained on the U.S. Standard No. 4 Sieve. The primary purpose of the free-draining material is the reduction of hydrostatic pressure. Some potential for the moisture to contact the back face of the wall may exist, even with treatment, which may require that more extensive waterproofing be specified for walls, which require interior moisture sensitive finishes.

We recommend that the backfill be compacted to at least 90 percent of the maximum dry density based on ASTM Test Method D1557. In place density tests should be performed to verify adequate compaction. Soil compactors place transient surcharges on the backfill. Consequently, only light hand operated equipment is recommended within 3 feet of walls so that excessive stress is not imposed on the walls.

Stormwater Management Feasibility

The site is underlain by relatively dense glacial till. The unweathered till was cemented and acts as a restrictive layer. Groundwater was perched within the weathered till above the denser unweathered glacial till. Groundwater is consistent with seasonal interflow.

We anticipate that most of the runoff will be routed to shallow detention systems. Additional systems may include permeable pavements, rain gardens, dispersion trenches, and bioretention.

We performed a small scale pilot infiltration test in TP-6 at a depth of 2 feet below grade to provide information for any very shallow systems above the restrictive layer. Widespread infiltration in the denser till at depth is not feasible.

The design infiltration rate was determined by applying correction factors to the measured infiltration rate as prescribed in Volume III, Section 3.3.6 of the DOE. The measured rate must be reduced through appropriate correction factors for site variability (CF_V), uncertainty of test method (CF_T), and degree of influent control (CF_M) to prevent siltation and bio-buildup.

It should be noted that construction traffic or other disturbance to the target infiltration area could compact the soil, which may decrease the effective infiltration rates. The correction factors and resulting design infiltration rate are also shown in the table below.

Test Number	Test Depth (ft)	Measured Infiltration Rate (in/hr)	Correction Factors			Design Infiltration Rate (in/hr)
			CF_V	CF_T	CF_M	
TP-6	2.0	0.78	0.9	0.5	0.9	0.32

The above rate may be used if near-surface systems are proposed. We should review the grading and civil plans to verify that adequate thicknesses of weathered till will be present. If cuts of 1.5 feet or more are proposed, shallow systems will not be feasible.

We should be provided with final plans for review to determine if the intent of our recommendations has been incorporated or if additional modifications are needed. We should be on site to confirm

Slab-on-Grade

We recommend that the upper 12 inches of the existing native soils within slab areas be re-compacted to at least 95 percent of the modified proctor (ASTM D1557 Test Method).

Often, a vapor barrier is considered below concrete slab areas. However, the usage of a vapor barrier could result in curling of the concrete slab at joints. Floor covers sensitive to moisture typically requires the usage of a vapor barrier. A materials or structural engineer should be consulted regarding the detailing of the vapor barrier below concrete slabs. Exterior slabs typically do not utilize vapor barriers.

The American Concrete Institutes ACI 360R-06 Design of Slabs on Grade and ACI 302.1R-04 Guide for Concrete Floor and Slab Construction are recommended references for vapor barrier selection and floor slab detailing.

Slabs on grade may be designed using a coefficient of subgrade reaction of 210 pounds per cubic inch (pci) assuming the slab-on-grade base course is underlain by structural fill placed and compacted as outlined in Section 8.1. A 4- to 6-inch-thick capillary break layer should be placed over the prepared subgrade. This material should consist of pea gravel or 5/8 inch clean angular rock.

A perimeter drainage system is recommended unless interior slab areas are elevated a minimum of 12 inches above adjacent exterior grades. If installed, a perimeter drainage system should consist of a 4-inch diameter perforated drain pipe surrounded by a minimum 6 inches of drain rock wrapped in a non-woven geosynthetic filter fabric to reduce migration of soil particles into the drainage system. The perimeter drainage system should discharge by gravity flow to a suitable stormwater system.

Exterior grades surrounding buildings should be sloped at a minimum of one percent to facilitate surface water flow away from the building and preferably with a relatively impermeable surface cover immediately adjacent to the building.

Erosion and Sediment Control

Erosion and sediment control (ESC) is used to reduce the transportation of eroded sediment to wetlands, streams, lakes, drainage systems, and adjacent properties. Erosion and sediment control measures should be implemented, and these measures should be in general accordance with local regulations. At a minimum, the following basic recommendations should be incorporated into the design of the erosion and sediment control features for the site:

- Schedule the soil, foundation, utility, and other work requiring excavation or the disturbance of the site soils, to take place during the dry season (generally May through September). However, provided precautions are taken using Best Management Practices (BMP's), grading activities can be completed during the wet season (generally October through April).
- All site work should be completed and stabilized as quickly as possible.
- Additional perimeter erosion and sediment control features may be required to reduce the possibility of sediment entering the surface water. This may include additional silt fences, silt fences with a higher Apparent Opening Size (AOS), construction of a berm, or other filtration systems.
- Any runoff generated by dewatering discharge should be treated through construction of a sediment trap if there is sufficient space. If space is limited other filtration methods will need to be incorporated.

Utilities

Utility trenches should be excavated according to accepted engineering practices following OSHA (Occupational Safety and Health Administration) standards, by a contractor experienced in such work. The contractor is responsible for the safety of open trenches. Traffic and vibration adjacent to trench walls should be reduced; cyclic wetting and drying of excavation side slopes should be avoided. Depending upon the location and depth of some utility trenches, groundwater flow into open excavations could be experienced, especially during or shortly following periods of precipitation.

In general, silty soils were encountered at shallow depths in the explorations at this site. These soils have low cohesion and density and will have a tendency to cave or slough in excavations. Shoring or sloping back trench sidewalls is required within these soils in excavations greater than 4 feet deep. Heavy caving should be expected in the outwash sands and gravels.

All utility trench backfill should consist of imported structural fill or suitable on site soils. Utility trench backfill placed in or adjacent to buildings and exterior slabs should be compacted to at least 95 percent of the maximum dry density based on ASTM Test Method D1557. The upper 5 feet of utility trench backfill placed in pavement areas should be compacted to at least 95 percent of the maximum dry density based on ASTM Test Method D1557. Below 5 feet, utility trench backfill in pavement areas should be compacted to at least 90 percent of the maximum dry density based on ASTM Test Method D1557. Pipe bedding should be in accordance with the pipe manufacturer's recommendations.

The contractor is responsible for removing all water-sensitive soils from the trenches regardless of the backfill location and compaction requirements. Depending on the depth and location of the proposed utilities, we anticipate the need to re-compact existing fill soils below the utility structures and pipes. The contractor should use appropriate equipment and methods to avoid damage to the utilities and/or structures during fill placement and compaction procedures.

Pavements

The near surface subgrade soils generally consist of silty sand with gravel. These soils are rated as good for pavement subgrade material (depending on silt content and moisture conditions). We estimate that the subgrade will have a California Bearing Ratio (CBR) value of 10 and a modulus of subgrade reaction value of k = 200 pci, provided the subgrade is prepared in general accordance with our recommendations.

We recommend that at a minimum, 12 inches of the existing subgrade material be moisture conditioned (as necessary) and re-compacted to prepare for the construction of pavement sections. Deeper levels of recompaction or overexcavation and replacement may be necessary in areas where fill and/or very poor (soft/loose) soils are present.

The subgrade should be compacted to at least 95 percent of the maximum dry density as determined by ASTM Test Method D1557. In place density tests should be performed to verify proper moisture content and adequate compaction.

The recommended flexible and rigid pavement sections are based on design CBR and modulus of subgrade reaction (k) values that are achieved, only following proper subgrade preparation. It should be noted that subgrade soils that have relatively high silt contents will likely be highly sensitive to moisture conditions. The subgrade strength and performance characteristics of a silty subgrade material may be dramatically reduced if this material becomes wet.

Based on our knowledge of the proposed project, we expect the traffic to range from light duty (passenger automobiles) to heavy duty (delivery trucks). The following tables show the recommended pavement sections for light duty and heavy duty use.

ASPHALTIC CONCRETE (FLEXIBLE) PAVEMENT

LIGHT DUTY

Asphaltic Concrete	Aggregate Base*	Compacted Subgrade* **
2.5 in.	6.0 in.	12.0 in.

HEAVY DUTY

Asphaltic Concrete	Aggregate Base*	Compacted Subgrade* **
3.5 in.	6.0 in.	12.0 in.

PORTLAND CEMENT CONCRETE (RIGID) PAVEMENT

Min. PCC Depth	Aggregate Base*	Compacted Subgrade* **
6.0 in.	6.0 in.	12.0 in.

** 95% compaction based on ASTM Test Method D1557*

*** A proof roll may be performed in lieu of in place density tests*

The asphaltic concrete depth in the flexible pavement tables should be a surface course type asphalt, such as Washington Department of Transportation (WSDOT) ½ inch HMA. The rigid pavement design is based on a Portland Cement Concrete (PCC) mix that has a 28 day compressive strength of 4,000 pounds per square inch (psi). The design is also based on a concrete flexural strength or modulus of rupture of 550 psi.

CONSTRUCTION FIELD REVIEWS

Cobalt Geosciences should be retained to provide part time field review during construction in order to verify that the soil conditions encountered are consistent with our design assumptions and that the intent of our recommendations is being met. This will require field and engineering review to:

- Monitor and test structural fill placement and soil compaction
- Observe bearing capacity at foundation locations
- Observe slab-on-grade preparation
- Verify stormwater system soil conditions
- Monitor foundation drainage placement
- Observe excavation stability

Geotechnical design services should also be anticipated during the subsequent final design phase to support the structural design and address specific issues arising during this phase. Field and engineering review services will also be required during the construction phase in order to provide a Final Letter for the project.

CLOSURE

This report was prepared for the exclusive use of Merle Ash and his appointed consultants. Any use of this report or the material contained herein by third parties, or for other than the intended purpose, should first be approved in writing by Cobalt Geosciences, LLC.

The recommendations contained in this report are based on assumed continuity of soils with those of our test holes and assumed structural loads. Cobalt Geosciences should be provided with final architectural and civil drawings when they become available in order that we may review our design recommendations and advise of any revisions, if necessary.

Use of this report is subject to the Statement of General Conditions provided in Appendix A. It is the responsibility of Merle Ash who is identified as "the Client" within the Statement of General Conditions, and its agents to review the conditions and to notify Cobalt Geosciences should any of these not be satisfied.

Sincerely,

Cobalt Geosciences, LLC

Statement of General Conditions

USE OF THIS REPORT: This report has been prepared for the sole benefit of the Client or its agent and may not be used by any third party without the express written consent of Cobalt Geosciences and the Client. Any use which a third party makes of this report is the responsibility of such third party.

BASIS OF THE REPORT: The information, opinions, and/or recommendations made in this report are in accordance with Cobalt Geosciences present understanding of the site specific project as described by the Client. The applicability of these is restricted to the site conditions encountered at the time of the investigation or study. If the proposed site specific project differs or is modified from what is described in this report or if the site conditions are altered, this report is no longer valid unless Cobalt Geosciences is requested by the Client to review and revise the report to reflect the differing or modified project specifics and/or the altered site conditions.

STANDARD OF CARE: Preparation of this report, and all associated work, was carried out in accordance with the normally accepted standard of care in the state of execution for the specific professional service provided to the Client. No other warranty is made.

INTERPRETATION OF SITE CONDITIONS: Soil, rock, or other material descriptions, and statements regarding their condition, made in this report are based on site conditions encountered by Cobalt Geosciences at the time of the work and at the specific testing and/or sampling locations. Classifications and statements of condition have been made in accordance with normally accepted practices which are judgmental in nature; no specific description should be considered exact, but rather reflective of the anticipated material behavior. Extrapolation of in situ conditions can only be made to some limited extent beyond the sampling or test points. The extent depends on variability of the soil, rock and groundwater conditions as influenced by geological processes, construction activity, and site use.

VARYING OR UNEXPECTED CONDITIONS: Should any site or subsurface conditions be encountered that are different from those described in this report or encountered at the test locations, Cobalt Geosciences must be notified immediately to assess if the varying or unexpected conditions are substantial and if reassessments of the report conclusions or recommendations are required. Cobalt Geosciences will not be responsible to any party for damages incurred as a result of failing to notify Cobalt Geosciences that differing site or sub-surface conditions are present upon becoming aware of such conditions.

PLANNING, DESIGN, OR CONSTRUCTION: Development or design plans and specifications should be reviewed by Cobalt Geosciences, sufficiently ahead of initiating the next project stage (property acquisition, tender, construction, etc), to confirm that this report completely addresses the elaborated project specifics and that the contents of this report have been properly interpreted. Specialty quality assurance services (field observations and testing) during construction are a necessary part of the evaluation of sub-subsurface conditions and site preparation works. Site work relating to the recommendations included in this report should only be carried out in the presence of a qualified geotechnical engineer; Cobalt Geosciences cannot be responsible for site work carried out without being present.

Unified Soil Classification System (USCS)

MAJOR DIVISIONS			SYMBOL	TYPICAL DESCRIPTION
COARSE GRAINED SOILS (more than 50% retained on No. 200 sieve)	Gravels (more than 50% of coarse fraction retained on No. 4 sieve)	Clean Gravels (less than 5% fines)	GW	Well-graded gravels, gravels, gravel-sand mixtures, little or no fines
			GP	Poorly graded gravels, gravel-sand mixtures, little or no fines
		Gravels with Fines (more than 12% fines)	GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (50% or more of coarse fraction passes the No. 4 sieve)	Clean Sands (less than 5% fines)	SW	Well-graded sands, gravelly sands, little or no fines
			SP	Poorly graded sand, gravelly sands, little or no fines
		Sands with Fines (more than 12% fines)	SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, sand-clay mixtures
FINE GRAINED SOILS (50% or more passes the No. 200 sieve)	Silts and Clays (liquid limit less than 50)	Inorganic	ML	Inorganic silts of low to medium plasticity, sandy silts, gravelly silts, or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays silty clays, lean clays
		Organic	OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays (liquid limit 50 or more)	Inorganic	MH	Inorganic silts, micaceous or diatomaceous fine sands or silty soils, elastic silt
			CH	Inorganic clays of medium to high plasticity, sandy fat clay, or gravelly fat clay
		Organic	OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS	Primarily organic matter, dark in color, and organic odor		PT	Peat, humus, swamp soils with high organic content (ASTM D4427)

Classification of Soil Constituents

MAJOR constituents compose more than 50 percent, by weight, of the soil. Major constituents are capitalized (i.e., SAND).

Minor constituents compose 12 to 50 percent of the soil and precede the major constituents (i.e., silty SAND). Minor constituents preceded by "slightly" compose 5 to 12 percent of the soil (i.e., slightly silty SAND).

Trace constituents compose 0 to 5 percent of the soil (i.e., slightly silty SAND, trace gravel).

Grain Size Definitions

Description	Sieve Number and/or Size
Fines	<#200 (0.08 mm)
Sand	
-Fine	#200 to #40 (0.08 to 0.4 mm)
-Medium	#40 to #10 (0.4 to 2 mm)
-Coarse	#10 to #4 (2 to 5 mm)
Gravel	
-Fine	#4 to 3/4 inch (5 to 19 mm)
-Coarse	3/4 to 3 inches (19 to 76 mm)
Cobbles	3 to 12 inches (75 to 305 mm)
Boulders	>12 inches (305 mm)

Relative Density (Coarse Grained Soils)

N, SPT, Blows/FT	Relative Density
0 - 4	Very loose
4 - 10	Loose
10 - 30	Medium dense
30 - 50	Dense
Over 50	Very dense

Consistency (Fine Grained Soils)

N, SPT, Blows/FT	Relative Consistency
Under 2	Very soft
2 - 4	Soft
4 - 8	Medium stiff
8 - 15	Stiff
15 - 30	Very stiff
Over 30	Hard

Moisture Content Definitions

Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, from below water table

- WSDOT - Washington State Department of Transportation
- WWHM - Western Washington Hydrology Model

Section 1 – Report Summary

1.1 Project Description

MJS Investors is proposing the development of 29.48-*acres* of land in Northwest Marysville, WA off of 11th Ave NE. The parcel is vacant and vegetated with pasture. The parcel has an onsite wetland and buffer.

The development of the parcel will result in a Planned Residential Development (PRD) with 182-Lots, public road and shared auto court. Each lot is allocated to accept a maximum of 70% total impervious of roof and driveway with the remaining portion consisting of lawn. Open space areas for both passive and active recreation will be located outside of the proposed lots.

The proposed road access for the PRD will be from 11th Ave NE at three locations. The development consists of public roads, lots, driveways, homes, auto court, on-site recreation and stormwater facilities.

Per NRCS mappings, type "B" Alderwood gravelly sandy loam soils are found throughout the site. No infiltration will be utilized. Infiltration is not feasible in Till soils with infiltration rates less than 0.3 *in/hr*.

The 2019 DOE Stormwater Management Manual for Western Washington will be used for stormwater management guidance. Stormwater management BMPs and engineered designs are specified in this report.

Stormwater facilities will consist of bioretention facilities.

The entire developable project area is in two natural discharge areas with two discharge locations. Stormwater BMPs will be employed to mitigate polluted and unpolluted surface water flows.

Summary Stormwater Management

The project qualifies as 'new development' because there are less than 35% of existing impervious areas. The proposed condition of the fully developed site will have more than 5,000 *sf* impervious areas. Per Figure I-3.1 Vol. 1 of the 2019 SMMWW, all minimum requirements shall apply for this project.

This project triggers MRs 1-9 and is within the City's UGA. The project will choose to adhere to List #2 of MR #5. On-site stormwater BMPs will consist only of BMPT5.13. Feasibility analysis for individual lot BMPs is provided in MR #5 of the report. However, the overall site stormwater management will mirror the requirements and intent of MR #5.

Flow control requirements for the site will be met by detention. The majority of runoff from impervious surfaces and converted surfaces will be detained. A small portion of the site bypasses facilities for detention. The site as a whole meets the flow control threshold requirement matching the fully-forested condition.

Water quality will be met by percolating stormwater through bioretention treatment soils. The bioretention cell mitigates polluted stormwater through physical, chemical, and biological treatment processes.

1.2 Project Data Summary

Existing and proposed project areas are presented for determination of stormwater management requirements based on prescribed thresholds as outlined in the Marysville Municipal Code (MMC 22C) and the 2019 SMMWW Vol-1, Ch-2, Section 2.4 are summarized in the following tables.

Table 1 - Project Parcel Summary

Project Data:	
Applicant	MJS Investors
Site Owner	Myron Gemmer & Brad Gemmer
Project Name	Lakewood Heights PRD
Project T.S.R. Location	Twn 31 N, Rng 5 E, Sec 19, Qtr-SE
Project Address	1125 & 1507 172nd Street NE, Marysville, Washington 98271
Parcel ID(s)	310519-004-009-00, 310519-004-011-00
Watershed	Snohomish
Basin	Snohomish
Sub-Basin	Quilceda Creek
WRIA Number	7-Snohomish
Analysis Standard	2019 DOE SMMWW

Table 2 - Project Area Analysis & Activities Summary

Existing Conditions:		
Total Site Area	1,283,961	sf (29.48 ac)
Existing Impervious Area	0	sf (0.00 ac) 0.0%
Proposed Activity:		
Proposed Activity	PRD Subdivision	
Total Proposed Disturbance Area	1,194,930	sf (27.43 ac)
Proposed Grading Area	1,194,930	sf (27.43 ac)
Proposed New NPGIS Onsite (Roof)	397,836	sf (9.13 ac)
Proposed New PGIS Onsite (Road, Sidewalk & Driveway)	303,086	sf (6.96 ac)
Proposed Replaced Impervious Area	0	sf (0.00 ac)
Native Vegetation convert to Lawn	0	sf (0.00 ac)
Native Vegetation convert to Pasture	0	sf (0.00 ac)
Total New Impervious Area Onsite	700,922	sf (16.09 ac)
Grading is ≤ 2 feet from P/L	No	
Any excavation 4+' at <1:1 slope to P/L	No	
Fill Slopes 4+' and >33% slope	No	

Section 2 - Minimum Requirements

2.1 Assessment of Minimum Requirements and Thresholds

Minimum requirements and thresholds are established by City of Marysville Municipal Code 14.15.050 – Minimum Requirements. Minimum Requirements for new development and Redevelopment are based on a development's disturbance area. Existing and proposed project areas for determination of stormwater management requirements are presented in Table 2.

The existing impervious area is less than 35% so this project qualifies as 'new development'. The proposed condition of the fully developed site will have impervious area in excess of 5,000 sf. This requires construction activities and stormwater management to comply with Minimum Requirements 1 through 9. A full construction SWPPP is also required.

Minimum Requirements per the SWWMM:

MR-1: Prepare Stormwater Site Plan. MMC 14.15.050 (1)

MR-2: Stormwater Pollution Prevention Plan (SWPPP). MMC 14.15.050 (2)

MR-3: Water pollution source control for new development. MMC 14.15.050 (3)

MR-4: Preservation of natural drainage systems and outfalls. MMC 14.15.050 (4)

MR-5: On-site stormwater management. MMC 14.15.050 (5)

MR-6: Runoff treatment. MMC 14.15.050 (6)

MR-7: Flow control requirements. MMC 14.15.050 (7)

MR-8: Detention or treatment in wetlands and wetland buffers. MMC 14.15.050 (8)

MR-9: Inspection, operation and maintenance requirements. MMC 14.15.050 (9)

Each Minimum Requirements is described in the following sections. There are no additional requirements to be met.

2.2 MR #1: Preparation of Stormwater Site Plans

This document is the Stormwater Site Plan Report that addresses the requirements of MR-1. This section presents the portion of the Stormwater Site Plan that includes recommendations, calculations, and procedures required to adhere to Minimum Requirement #1. The evaluation of the existing site conditions follows.

2.2.1 Site Location

The site is located in the SE quarter of Section 19 of Township 31 North, Range 5 East. The street address is 1125 & 1507 172nd Street NE, Marysville, Washington 98271 and the parcel is located on the north side of 172nd Street NE. See Figure 1 for a vicinity map.

2.2.2 Site Description, Existing Conditions

The project site is a 29.48-*acres* parcel. The parcel is owned by Myron Gemmer & Brad Gemmer. The Snohomish County parcel number is 310519-004-009-00, 310519-004-011-00. It is zoned R-6.5 Multi-Family High and Mixed Use and is located in Snohomish County.

The site is vacant. The existing drainage system(s) are undetermined but largely surface runoff to an existing agriculture ditch over the top silt layer. Surface runoff overall flows southwest and east.

The majority of the site is pasture.

All maps and figures are presented in the Support Data section of this document.

A vicinity map that shows the site location is shown as Figure 1.

A site map that shows the property lines is shown in Figure 2.

A topographic map that shows the site boundaries, study area boundaries, and the downstream flow-paths is also presented in Figure 3.

2.2.3 Existing Basin Analysis

The project is defined by the development within the subject parcel. Existing project flow paths are shown in Figure 2.

The study area is located in the Quilceda Creek sub-basin of the Snohomish Basin in the Snohomish watershed (WRIA-7-Snohomish), which drains to the Puget Sound.

All existing flow assessment and site related basin delineations were established by tracing analysis of a LIDAR surface model.

2.2.4 Other Information on the Study Area

The site is not in or adjacent to a USEPA Sole Source Aquifer.

The site is not in a well-head protection area.

The site is not in a floodway or floodplain.

2.2.5 Critical Areas

There is an onsite Category III wetland on the northwest corner of the site. Category III wetlands carry 75-foot buffer. An offsite Category III wetland is located north of the site. The offsite wetland's buffer encroaches onto the site.

2.2.6 Topography

The site and surrounding topography was analyzed using survey topographic points provided by North Peak Associates. A 3D surface model was generated.

The site has mostly flat slopes with high points around 162 feet MSL in the middle of the site. The site slopes up from the west to a high point 162 feet and then slopes down to the east boundary.

Slopes average in the range of 0 to 5 percent for the majority of the developable area. The site has an average slope of 3.89%.

2.2.7 Soils

Per NRCS mappings, Tokul gravelly sandy loam soils are found throughout the site. Tokul soils are related with glacial Till. Glacial Till is also mapped within the USGS Geologic maps for this site.

Infiltration cannot be used as a primary component of stormwater management due to the relative density of site soils.

Detailed physical and chemical properties of these soils are presented in Section 4.1. The NRCS mapping can be seen in Figure 5.

2.2.8 Field Inspection

The site has not been visited recently. All inspection has been conducted via remote sensing.

2.2.9 Upstream Analysis

The site is at a local high point in the area. No upstream basin flows onto the site.

2.2.10 Downstream Analysis

The downstream area was established by tracing analysis of a LIDAR surface model and evaluation of various GIS data, aerial imagery, and City of Marysville Drainage Inventory. Two onsite basins are present on site. The basins on site are named West and East Basin respective to their location within the site. The Basins meet within West Fork Quilceda Creek more than ¼ mile as measured from the shortest path away.

Stormwater from West Basin flows to the southwest between property lines before reaching an existing ditch, which flows south and is parallel to the west property boundary. The ditch turns east at the southwest corner of the site. There is an existing 8" concrete culvert at the end of the ditch. The ditch is then conveyed through the culvert and across 172nd Street NE. Stormwater flows along the storm system within 172nd Street NE ROW and then within a bypass conveyance system along 11th Ave NE. The storm system eventually discharges to West Fork Quilceda Creek south of the high school stadium.

East Basin flows east to an existing ditch, which is within Burlington Northern RR ROW. Stormwater flows southeast along the ditch and across 172nd Street NE ROW via an existing 12" concrete culvert. Stormwater then drains to an existing ditch which flows northeast along the railroad. The two basins eventually meet within West Fork Quilceda Creek which portion flows along the RR ROW.

Figure 3 shows a portion of the downstream flow path.

2.3 MR #2: Stormwater Pollution Prevention Plans (SWPPPs)

MMC 14.15.050 (2) specifies the requirements for development and redevelopment projects are responsible for preventing erosion and discharge of sediment and other pollutants into receiving waters. Volume I, Chapter 2.5.2 of the 2019 SMMWW specifies that all new development and redevelopment implement a Stormwater Pollution Prevention Plans (SWPPP), which is a list of 13 elements that present measures and methods for all permanent and temporary erosion and sediment control (TESC), pollution prevention, inspection/monitoring activities, and recordkeeping required during the proposed construction project.

Based on the MR#2 thresholds, this project generates more than 2,000 *square feet* of impervious area, so a full SWPPP is required. Required elements for the SWPPP:

- SWPPP element 1: Preserve vegetation/mark clearing limits
- SWPPP element 2: Establish construction access
- SWPPP element 3: Control flow rates
- SWPPP element 4: Install sediment controls
- SWPPP element 5: Stabilize soils
- SWPPP Element 6: Protect slopes
- SWPPP element 7: Protect permanent drain inlets
- SWPPP element 8: Stabilize channels and outlets
- SWPPP element 9: Control pollutants
- SWWP element 10: Control dewatering
- SWPPP element 11: Maintain best management practices
- SWPPP element 12: Manage the project
- SWPPP element 13: Protect On-Site Stormwater Management BMPs for Runoff from Roofs and Other Hard Surfaces

The SWPPP is assembled as a separate document for portability and reproduction purposes. The document is titled "**Stormwater Pollution Prevention Plan for MJS Investors**", dated 14 February 2024.

2.4 MR #3: Source Control of Pollution

MMC 14.15.050 (3) specifies the requirements for water pollution source control for new development or redevelopment activities in accordance with Volume IV of the SMMWW. These activities are primarily commercial industrial developments that represent significant pollutant generation potential and the associated source control BMPs are designed to suit those activities.

Per Chapter 2.5.3, MR#3 does not apply to residential development, hence such source controls are not specified for this project.

2.5 MR #4: Preservation of Natural Drainage Systems and Outfalls

MMC 14.15.050 (4) specifies the requirements for preservation of natural drainage systems or outfalls for all new development and redevelopment activities under Minimum Requirement 4 in the 2019 SMMWW.

Natural drainage patterns as they once existed shall be retained. Pre-developed conditions experience a sheet drainage pattern to the site's west and east property boundary. Stormwater generated onsite reaches the property boundary through infiltration or surface runoff prior to being intercepted by exiting ditches. Existing discharge location shall be maintained.

2.6 MR #5: On-Site Stormwater Management

MMC 14.15.050 (5) specifies requirements for on-site stormwater BMPs. This requirement mandates that on-site stormwater runoff be infiltrated, dispersed, and/or retained to the maximum extent feasible without causing flooding or erosion impacts. Projects triggering Minimum Requirements 1 through 5 must use On-site stormwater management BMPs from List #1 for all surfaces or demonstrate compliance with the LID Performance Standard. Projects triggering Minimum Requirements 1 through 9 must meet the requirements of Table 2.5.1 in Vol. 1 of the 2019 SMMWW. Table 2.5.1 specifies the requirements for new or redevelopment depending on UGA and parcel size to meet the requirements of the LID Performance Standard and/or List #2. List #1 and List #2 specify stormwater BMPs in order of preference. The first BMP determined feasible is required.

This project trigger MR's 1-9. This project is within the City's UGA. This project is required to adhere to the LID Performance Standard or List #2 per Table 2.5.1.

List #1 and #2 contain appropriate BMPs to mitigate a particular developed surface. The surfaces included in the list are Lawn and Landscaped Areas, Roofs, and other hard surfaces (road/driveway/parking).

> Lawn/Landscape is required to utilize BMP T5.13, Post-Construction Soil Quality and Depth.
>
> Roofs are required to employ BMP T5.30 Full Dispersion or Downspout Infiltration, Rain Gardens or Bioretention, BMP T5.10A Downspout Dispersion Systems, or perforated stub-out connections. The first feasible BMP in this list must be used.
>
> Other Hard surfaces (Roads, Driveways, Parking Lots, Etc.) must utilize BMP T5.30 Full Dispersion, BMP T5.15 Permeable Pavement, Bioretention, Sheet Flow Dispersion, or Concentrated Flow Dispersion. The first feasible BMP in this list must be used.

Lawn/landscape will utilize BMP T5.13, Post Construction Soil Quality and Depth.

Roofs will not be able to provide BMP T5.30 Full Dispersion. Full Dispersion requires 100-*foot* flow paths within native areas. The project will not be able to maintain 65% open space.

Individual Lot Infiltration is not feasible based on the low-permeability of native soils. Most roofs will be ultimately routed to bioretention areas for treatment and flow control.

BMP T5.10B Downspout Dispersion will not be utilized as each individual lot lacks the prescriptive flow path length. BMP T5.10C perforated stub out connections are also not feasible due to the close proximity of sewer, water, gas, electricity, and cable utilities on these narrow 40 ft wide lots. Perforated stub outs are also not permitted to be installed beneath driveways.

Onsite stormwater BMPs are infeasible.

Road and Driveway/Parking will be routed to bioretention areas, BMP T7.30. The bioretention cells will treat stormwater through filtering, phytoremediation, and microbial action from within the compost.

Permeable pavement will not be used as the pavement areas are likely to have long-term excessive sediment deposition after construction and homeowner turnover. Permeable pavement

may also be constructed over the top of compacted structural fill that does not exhibit infiltration rates consistent with the requirements for this BMP.

A site plan showing the stormwater management and development can be seen in Figure 4.

2.7 MR #6: Runoff Treatment

Minimum Requirement #6 in MMC 14.15.050 (6) specifies the requirements for providing runoff treatment. The threshold for requiring a treatment BMP is 5,000 *square feet* of PGIS (Pollution Generating Impervious Surface) or a total of more than ¾ of an acre of PGPS (Pollution Generating Pervious Surface).

This project is expected to generate 303,086 *square feet* (6.96 *acres*) of PGIS based on road, sidewalk and driveway areas, therefore treatment facility BMPs are required for this project.

Runoff treatment facility selection is outlined in Vol. III-1.2 of the 2019 SMMWW. Figure III-1.1 outlines the treatment facility selection flow chart based on the intended use of a project. Treatment selection is based on if the site is a high-use site, if the downstream receiving waters are phosphorous sensitive, and/or if the site is required to provide enhanced treatment. The definitions of high-use, phosphorous control, and enhanced treatment can be found in Section III-1.2 of the 2019 SMMWW.

The project is not a high use site.

The project is not required to treat for phosphorous.

Enhanced treatment is not required for the project.

Enhanced and Basic treatment is provided through the use of a bioretention facility per Vol. III Section 3.3.12 of the 2019 SMMWW. The bioretention specified will provide enhanced treatment. The bio-cell treats stormwater through the infiltration of stormwater through soils and their ability to absorb pollutants. On-site soils are suitable for use. See Vol III. Section 3.3.12 of the 2019 SMMWW for specific soil design criteria.

The project utilizes bioretention cells for treatment. The bioretention cell mitigates polluted stormwater through physical, chemical and biological treatment processes. The treatment process reduces pollutant loads to downstream receiving waters. Stormwater percolates through compost amended soils and plantings to obtain treatment. The total percolated runoff through each bio-cell's amended soils is well over the 91% total runoff volume treatment requirement. See Section 7.

2.8 MR #7: Flow Control

Minimum Requirement #7 in MMC 14.15.050 (7) specifies the requirements for runoff flow control. The threshold for requiring Minimum Requirement #7 is 5,000 *square feet* of impervious surface. Flow control shall be provided if the project creates more than 10,000 *square feet* of effective impervious area in a threshold discharge area, converts ¾ of an acre or more of native vegetation to lawn, 2.5 *acres* or more native vegetation is converted to pasture, or a combination of impervious and converted pervious surfaces cause a 0.1 *cfs* increase in the 100-*year* flow frequency from a continuous simulation runoff model.

The project exceeds this requirement and is required to provide flow control.

All runoff from impervious surfaces and converted surfaces is preferred to be infiltrated if feasible. Standard flow control requires that stormwater discharges match pre-developed discharge durations for the range of pre-developed discharge rates from 50% of the 2-year peak flow to the 50-year peak flow. The pre-developed condition shall be matched to the fully-forested condition (soils and vegetation) to which the Western Washington Hydrologic Model (WWHM) is calibrated, unless reasonable, historic information is provided that indicates the site was prairie prior to Euro-American settlement. This requirement may also be met by Full dispersion and infiltration. This standard requirement is waived for sites that will reliably infiltrate all the runoff from hard surface and converted vegetation areas.

The site stormwater management practices detention of stormwater generated on site. A small portion of the frontage and rooftops bypass facilities for detention. These bypasses are included in the stormwater model. The site as a whole still meets the flow control threshold requirement.

The site is split into two overall basins, West and East.

Stormwater generated in West Basin flows to Bioretention Cell A, C and D. Bioretention Cell A, C and D release stormwater to a proposed stormwater system within 11th Ave NE ROW.

Stormwater generated in East Basin flows to Bioretention Cell B. The discharge of the cell is to a level spreader.

The combination of bioretention cells A,B,C and D meet compliance with flow-control standard of 50% of the 2-year to the 50% predeveloped stormwater flows.

All bioretention cells are comprised of 1.5 *feet* of bioretention soil media. Those cells utilize ponded area with freeboard to allow stormwater to percolate through the amended soils. Percolated stormwater drains to a filter layer, and then to a storage chamber consisting of 0.5 *ft* to 8.0 *ft* of rock. The rock layer is drained through a perforated underdrain.

See Section 7 for bioretention cells, planter bioswales and rooftop modeling parameters.

2.9 MR #8: Wetlands Protection

MMC 14.15.050 (8) specifies requirements for discharge of stormwater in wetlands and wetland buffers as well as discharge of stormwater to a stream.

Since there is no detention or treatment in the critical areas, MR-8 does not apply to this project.

2.10 MR # 9: Operation and Maintenance

Minimum Requirement #9 specified MMC 14.15.050 (9) contains requirements for inspection, operation and maintenance of stormwater facilities and BMPs. Specific maintenance standards and requirements are outlined in Volume V of the 2019 SMMWW. The 2019 SMMWW requires the regular maintenance and inspection of drainage facilities.

For portability and reproduction purposes, the Operations and Maintenance Manual is presented in a separate stand-alone document titled "**Operations and Maintenance Manual for Lakewood Heights PRD"**, dated **14 February 2024.** This document will be provided with the construction plan submittal.

4.1 Soils Data

1—Alderwood gravelly sandy loam, 0 to 8 percent slopes

Map Unit Setting
National map unit symbol: 2t625
Elevation: 50 to 800 feet
Mean annual precipitation: 25 to 60 inches
Mean annual air temperature: 48 to 52 degrees F
Frost-free period: 160 to 240 days
Farmland classification: Prime farmland if irrigated
Map Unit Composition
*Alderwood and similar soils:*85 percent
*Minor components:*15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.
Description of Alderwood
Setting
*Landform:*Hills, ridges
*Landform position (two-dimensional):*Summit
*Landform position (three-dimensional):*Crest, talf
*Down-slope shape:*Convex, linear
*Across-slope shape:*Convex
*Parent material:*Glacial drift and/or glacial outwash over dense glaciomarine deposits
Typical profile
A - 0 to 7 inches: gravelly sandy loam
Bw1 - 7 to 21 inches: very gravelly sandy loam
Bw2 - 21 to 30 inches: very gravelly sandy loam
Bg - 30 to 35 inches: very gravelly sandy loam
2Cd1 - 35 to 43 inches: very gravelly sandy loam
2Cd2 - 43 to 59 inches: very gravelly sandy loam
Properties and qualities
*Slope:*0 to 8 percent
*Depth to restrictive feature:*20 to 39 inches to densic material
*Drainage class:*Moderately well drained
*Capacity of the most limiting layer to transmit water (Ksat):*Very low to moderately low (0.00 to 0.06 in/hr)
*Depth to water table:*About 18 to 37 inches
*Frequency of flooding:*None
*Frequency of ponding:*None
Available water supply, 0 to 60 inches: Very low (about 2.7 inches)
Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: B
Ecological site: F002XA004WA - Puget Lowlands Forest
Forage suitability group: Limited Depth Soils (G002XN302WA), Limited Depth Soils (G002XF303WA), Limited Depth Soils (G002XS301WA)

Other vegetative classification: Limited Depth Soils (G002XN302WA), Limited Depth Soils (G002XF303WA), Limited Depth Soils (G002XS301WA)
Hydric soil rating: No
Minor Components
Mckenna
*Percent of map unit:*5 percent
*Landform:*Drainageways, depressions
*Landform position (three-dimensional):*Dip
*Down-slope shape:*Linear, concave
*Across-slope shape:*Concave
Hydric soil rating: Yes
Everett
*Percent of map unit:*5 percent
*Landform:*Moraines, eskers, kames
*Landform position (two-dimensional):*Summit, shoulder
*Landform position (three-dimensional):*Interfluve, crest
*Down-slope shape:*Convex
*Across-slope shape:*Convex
Hydric soil rating: No
Shalcar
*Percent of map unit:*3 percent
*Landform:*Depressions
*Landform position (three-dimensional):*Dip
*Down-slope shape:*Concave
*Across-slope shape:*Concave
Hydric soil rating: Yes
Norma
*Percent of map unit:*2 percent
*Landform:*Drainageways, depressions
*Landform position (three-dimensional):*Dip
*Down-slope shape:*Linear, concave
*Across-slope shape:*Concave
Hydric soil rating: Yes

27—Kitsap silt loam, 0 to 8 percent slopes
Map Unit Setting
National map unit symbol: 2hyh
Elevation: 0 to 490 feet
Mean annual precipitation: 37 inches
Mean annual air temperature: 50 degrees F
Frost-free period: 160 to 200 days
Farmland classification: All areas are prime farmland
Map Unit Composition
*Kitsap and similar soils:*85 percent

*Minor components:*5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.
Description of Kitsap
Setting
*Landform:*Terraces
*Parent material:*Lacustrine deposits
Typical profile
H1 - 0 to 6 inches: ashy silt loam
H2 - 6 to 33 inches: silt loam
H3 - 33 to 60 inches: stratified silt to silty clay loam
Properties and qualities
*Slope:*0 to 8 percent
*Depth to restrictive feature:*More than 80 inches
*Drainage class:*Moderately well drained
*Capacity of the most limiting layer to transmit water (Ksat):*Moderately low to moderately high (0.06 to 0.20 in/hr)
*Depth to water table:*About 18 to 30 inches
*Frequency of flooding:*None
*Frequency of ponding:*None
Available water supply, 0 to 60 inches: High (about 11.4 inches)
Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C
Ecological site: F002XA004WA - Puget Lowlands Forest
Forage suitability group: Soils with Few Limitations (G002XF503WA)
Other vegetative classification: Soils with Few Limitations (G002XF503WA)
Hydric soil rating: No
Minor Components
Bellingham, undrained
*Percent of map unit:*5 percent
*Landform:*Depressions
*Other vegetative classification:*Wet Soils (G002XN102WA)

Hydric soil rating: Yes

5.1 Topographic Data

- The various on and off site topography, utilities, and drainage elements were professionally surveyed by Pacific Coast Surveying in 2019.

- Snohomish County 2003 LiDAR survey was used to augment the existing site topography and the downstream and surrounding areas.

The modeled coordinate system:
Lateral - Washington State Plan Plane - North, FIPS 4601;
Vertical – NAVD 88

Section 6 - Continuous Simulation Modeling

6.1 Continuous Simulation Background

HSPF based continuous simulation modeling was used to evaluate the hydrologic performances of the pre-developed and developed sub-basins in order to accurately assess flow rates.

The currently adopted continuous simulation models use the HSPF (Hydraulic Simulation Program in FORTRAN) software engine. The HSPF model uses a robust and detail accounting of the 'water budget', including evaporation, evapotranspiration, interception, interflow, and groundwater. The modeling accounts for and assesses land segment areas that include vegetation or impervious cover, soil types, and slopes. The modeling also uses utilized over 50 years of continuous rainfall data (precipitation) and evaporation data for the area. The HSPF continuous modeling is considered the best available science for hydrologic analysis.

6.2 Modeling Methodology

HSPF modeling was managed via the Western Washington Hydrology Model (WWHM) interface program. The current professional version of WWHM by Clearcreek Solutions, Inc., WWHM-2012 was used. The current data precipitation and evaporation set provided by DOE with the WWHM-2012 software interface was used that includes quantized data in 15-minute time steps from October 1948 to October 2009.

The WWHM program comes packaged with generic, well considered HSPF modeling parameters. These settings allow for the modeling of the majority of the topological conditions found in the Puget Sound area. Where conditions fall reasonably outside the range of the default HSPF parameters, adjustments should be made to more accurately reflect those conditions. These is generally limited to the pervious land segments (IMPLNDS) and are mostly limited to slopes (SLSUR), infiltration rates (INFILT), and length of flow path (LSUR). For this project, HSPF parameters were not adjusted to reflect site conditions.

6.2.1 Existing Conditions

The surface vegetative cover is assumed fully forested with an average slope of 5% in the area of development, based on the LIDAR based TIN analysis. The LIDAR model represents the pre-graded conditions and is in accordance with the predeveloped requirements to be represented as native vegetation and soils that existed at a site prior to the influence of Euro-American settlement.

The NRCS soil mapping of Tokul gravelly medial loam within the modeled area is listed as Type C hydrologic soils. Land segments of Forest Flat, Mod are representative of the existing site areas. Wetland buffer is mapped as Forest, Flat. The wetland area itself is modeled in the WWHM as Sat Forest, Flat.

6.2.2 Developed Conditions

Default mapping for flat road was used for the road areas. Roof was for the rooftop areas. Driveway was for the driveway areas and sidewalk for the paths. Pasture was used for the amended soils from DOE recommendations for amended soils modeling. The intent of the modeling of this site was to determine the infiltration and treatment efficiencies of the bio-retention cell. Flow control modeling took place for the bypass area that is unable to be introduced to street system.

It should be noted that when ponds, bio-swales, or other open detention facilities are used, the corresponding WWHM analysis module includes the ponded area. Consequently, this area is not included in the basin land segment mappings so the total area is often different between the developed and pre-developed conditions.

The current DOE specification for amended soils in 2019 is labeled as 'SMMWW' in the Bio-Swale and other WWHM modules that employ amended soils. The parameters for modeling the SMMWW are preset and based on current state-of-the-art modeling using a combination of the Darcy's and Van Genuchten's equations to account for the variability of permeability and water content as the soils transition from dry or partly damp to saturated conditions as the bio-cell cycles through the process of filling, emptying, and drying out. The SMMWW settings based on the WSU amended soils.

Section 7 - Software Output

The following WWHM reports in this section represent individual sub-basin analysis for hydrologic flow evaluations. The following heading is common to all reports.

Name : Gravel Trench Bed C
Bottom Length: 595.00 ft.
Bottom Width: 40.00 ft.
Trench bottom slope 1: 0.1 To 1
Trench Left side slope 0: 0.1 To 1
Trench right side slope 2: 0.1 To 1
Material thickness of first layer: 4
Pour Space of material for first layer: 0.42
Material thickness of second layer: 0
Pour Space of material for second layer: 0
Material thickness of third layer: 0
Pour Space of material for third layer: 0
Discharge Structure
Riser Height: 3.6 ft.
Riser Diameter: 18 in.
Notch Type: Rectangular
Notch Width: 1.300 ft.
Notch Height: 0.040 ft.

Orifice 1 Diameter: 1.1 in. **Elevation:** 0 ft.

Element Flows To:
Outlet 1 **Outlet 2**

7.2 East Basin

Project Name: East Basin 0102
Site Name: Gemmer PRD
Site Address: 1125 172nd St NE
City : Marysville, WA
Report Date: 2/14/2024
Gage : Everett
Data Start : 1948/10/01
Data End : 2009/09/30
(adjusted) **Precip Scale:** 0.00
Version Date: 2023/01/27
Version : 4.2.19

Low Flow Threshold for POC 1 : 50 Percent of the 2 Year

High Flow Threshold for POC 1: 50 year

PREDEVELOPED LAND USE

Name : Basin 1
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	7.338
C, Forest, Mod	5.501
Pervious Total	12.839

Impervious Land Use	acre
Impervious Total	0
Basin Total	12.839

Element Flows To:

Surface	Interflow	Groundwater

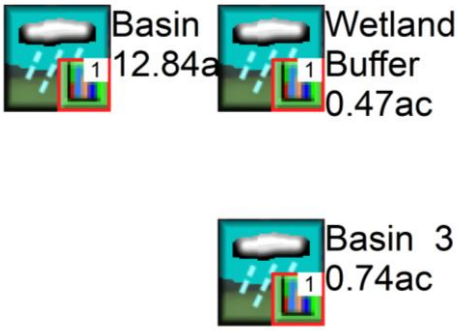
Name : Wetland Buffer
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	.465
Pervious Total	0.465

Impervious Land Use	acre
Impervious Total	0
Basin Total	0.465

Element Flows To:



Surface	Interflow	Groundwater

Name : Basin 3
Bypass: No

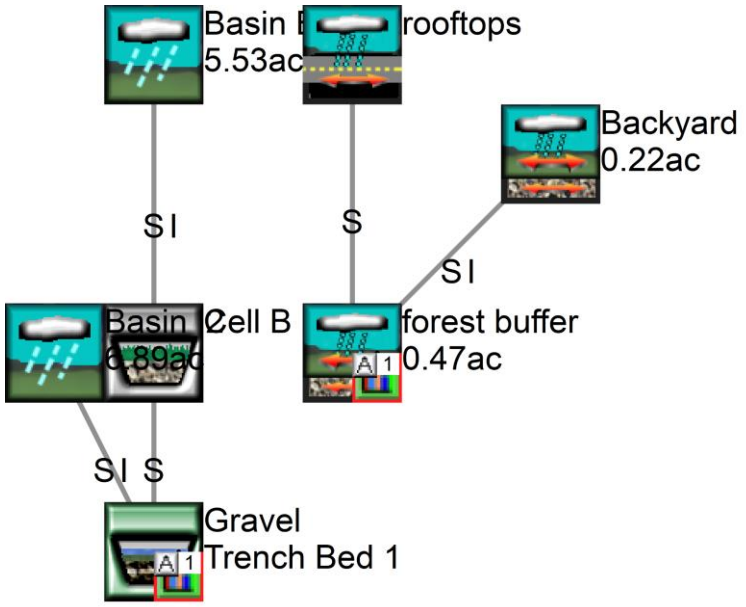
GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	.736
Pervious Total	0.736

Impervious Land Use	acre
Impervious Total	0
Basin Total	0.736

Element Flows To:

Surface	Interflow	Groundwater



MITIGATED LAND USE

Name : Basin B
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Pasture, Flat	.946
Pervious Total	0.946

Impervious Land Use	acre
ROADS FLAT	2.084
DRIVEWAYS FLAT	1.469
SIDEWALKS FLAT	1.034
Impervious Total	4.587
Basin Total	5.533

Element Flows To:

Surface	Interflow	Groundwater
Surface Cell B	Surface Cell B	

Name : Cell B
Bottom Length: 1220.00 ft.
Bottom Width: 12.00 ft.
Material thickness of first layer: 1.5
Material type for first layer: SMMWW 12 in/hr
Material thickness of second layer: 0

Material type for second layer: Sand
Material thickness of third layer: 0
Material type for third layer: GRAVEL
Underdrain used
Underdrain Diameter (feet): 0.5
Orifice Diameter (in.): 1.9
Offset (in.): 0
Flow Through Underdrain (ac-ft.): 751.203
Total Outflow (ac-ft.): 788.961
Percent Through Underdrain: 95.21
Discharge Structure
Riser Height: 0.5 ft.
Riser Diameter: 12 in.
Notch Type: Rectangular
Notch Width: 0.125 ft.
Notch Height: 0.400 ft.
Orifice 1 Diameter: 0.2 in. **Elevation:** 0 ft.

Element Flows To:
Outlet 1 **Outlet 2**
Gravel Trench Bed 1

Stormwater Pollution Prevention Plan

Project Data Summary:

Existing and proposed project areas are presented for determination of stormwater management requirements. Requirements are based on prescribed thresholds as outlined on the Snohomish County Code (SCC) 30.63A.300.

Project Data:			
Applicant	MJS Investors		
Site Owner	Myron Gemmer & Brad Gemmer		
Project Name	Lakewood Heights PRD		
Project T.S.R. Location	Twn-31 N, Rng-5 E, Sec-19, Qtr-SE		
Project Address	1125 & 1507 172nd Street NE, Marysville, Washington 98271		
Existing Conditions:			
Total Site Area	1,283,961	sf (29.48 ac)	
Existing Impervious Area	0	sf (0.00 ac)	0.0%
Proposed Activity:			
Proposed Activity	PRD Subdivision		
Proposed Clearing Area	1,194,930	sf (27.43 ac)	
Proposed Grading Area	1,194,930	sf (27.43 ac)	
Proposed New NPGIS	397,836	sf (9.13 ac)	
Proposed New PGIS	303,086	sf (6.96 ac)	
Proposed Replaced Impervious Area	0	sf (0.00 ac)	
Native Vegetation convert to Lawn	0	sf (0.00 ac)	
Native Vegetation convert to Pasture	0	sf (0.00 ac)	
Total New Impervious Area	**700,922**	**sf (16.09 ac)**	
Proposed Disturbance Area	**1,194,930**	**sf (27.43 ac)**	

This project qualifies as 'New Development' and requires construction activities to comply with Minimum Requirements 1 through 9. This document is part of the Stormwater Site Plan and presents recommendations and procedures required to adhere to the minimum requirements.

Introduction:

This document is part of the Stormwater Site Plan for the MJS Investors Fee-Simple Subdivison Permit Application. The Stormwater Pollution Prevention Plan (SWPPP) fulfills Minimum Requirement 2 of the drainage requirement as outlined in the Stormwater Management Manual for Western Washington (SMMWW). It has been prepared for NPDES stormwater permit requirements for site improvements on MJS Investors Parcel No. 310519-004-009-00, 310519-004-011-00 located at 1125 & 1507 172nd Street NE, Marysville, Washington 98271.

Construction Activities

The SWPPP describes proposed construction activities, all erosion and sediment control measures, pollution prevention measures, inspection/monitoring activities, and recordkeeping that will be implemented during the proposed construction project.

The objective of the SWPPP is to:

a) Implement Best Management Practices (BMPs) to prevent erosion and sedimentation, and to identify, reduce, eliminate or prevent stormwater contamination and water pollution from construction activity.
b) Prevent violations of surface water quality, ground water quality, or sediment management standards.
c) Prevent, during the construction phase, adverse water quality impacts including impacts on beneficial uses of the receiving water by controlling peak flow rates and volumes of stormwater runoff at the Permittee's outfalls and downstream of the outfalls.

There are thirteen elements presented in the 2019 SMMWW Volume II, Chapter 3. Each element is addressed in this document for the project site and was prepared per the requirements set forth in the current Drainage Manual of 2019 (2019 SMMWW).

NOTES:

1. BMPs referred to in this document are those specified in the 2019 SMMWW. A copy of Volume 2 of the 2019 SMMWW should be acquired and made available at the construction site.
2. NOTE: Siting, sizing, materials, and other specifications for all BMPs offered in this SWPPP are presented in the Stormwater Site Plan Set as the 'SWPPP PLAN" sheet.

Element 1: Preserve Vegetation/Mark Clearing Limits

Preservation of vegetation is a guideline to minimize the removal of existing trees and limit disturbance of natural areas. The goal of Element 1 is to retain natural vegetation, limit compaction of native top soil, and maintain any existing duff layer. An effective method of preserving vegetation is by marking clearing limits.

Soil shall be managed in a manner that does not permanently compact or deteriorate the final soil and landscape system.

If disturbance and/or compaction occur, the impact must be corrected at the end of construction activity. This shall include restoration of soil depth, soil quality, permeability, and percent organic matter. Construction practices must not cause damage to, or compromise the design of permanent landscape or infiltration areas. Delineate or mark the following areas and features on the site prior to land disturbing activities:

a) Clearing limits;
b) All critical areas, and their setbacks and buffers;
c) Erosion or landslide hazard areas and their setbacks and buffers;
d) Existing and proposed easements;
e) Required landscaping, and tree retention and replacement areas;
f) Other areas on the site required to be preserved or protected including, but not limited to, drainage courses.

Relevant BMPs:

- BMP C101: Preserving Natural Vegetation
- BMP C102: Buffer Zones
- BMP C103: High Visibility Plastic or Metal Fence
- BMP C104: Stake and Wire Fence

Element 2: Establish Construction Access

Construction vehicle ingress and egress shall be limited to one route if possible. A stabilized construction entrance or other equivalent BMP shall be installed to prevent sediment transport onto roads. The location is shown on the SWPPP plan.

This site experiences infrequent traffic. The stabilized construction and parking shall be constructed to the west. The goal is to minimize sediment transport out of the construction area to neighboring businesses and roads.

Relevant BMPs:

- BMP C105: Stabilized Construction Entrance
- BMP C107: Construction Parking Area Stabilization

Element 3: Control Flow Rates

The purpose of Element 3 is to protect downstream property and waterways from soil erosion due to increases in velocity and peak volumetric flow rate of stormwater runoff. Stormwater retention or detention facilities may be needed to comply with this requirement. As the existing site is primarily

pasture/lawn with flat slopes, there will be effectively no change in flow rate from the current condition caused by grading. The implementation of soil stabilization BMPs as presented in Element 4 will provide all the flow control needed.

Relevant BMPs:

- None

Element 4: Install Sediment Controls

Remove sediment from construction site runoff by using appropriate sediment removal BMPs. Runoff from fully stabilized areas may be discharged without a sediment removal BMP.

The bio-cell areas on the northern side of the site will provide most of the sediment control needs when flows are not concentrated and will flow through the existing grasses and vegetation before reaching a sediment trap. Brush barriers, and straw wattles will provide protection in areas with steep slopes from grading activities. Wattles should be oriented to guide flow to the south.

Relevant BMPs:

- BMP C230: Straw Bale Barrier
- BMP C231: Brush Barrier
- BMP C233: Silt Fence (or preserve natural vegetation – see Element 1)
- BMP C234: Vegetated Strip
- BMP C235: Straw Wattles
- BMP C240: Sediment Trap

Element 5: Stabilize Soils

Exposed and unworked soils and soil stockpiles shall be stabilized. Soil stockpiles shall be located away from storm drain inlets, drainage channels and other waters.

Mandatory: The time period of soil exposure allowed depends on the season. No soil shall remain exposed and unworked for more than seven days during the dry season, May 1 through September 30, or two days during the wet season, October 1 through April 30, unless other restrictions are placed on the project.

Soil piles should be covered. Plastic covering will likely be the best option. Fill exploration holes or deep excavations as soon as possible. Rough grade the site to eliminate large soil mounds and prepare for temporary cover. Large soil mounds prove to be highly erodible. Remove excess soil from the site as soon as possible after backfilling. This will eliminate any sediment loss from surplus fill.

Relevant BMPs:

- BMP C120: Temporary and Permanent Seeding
- BMP C121: Mulching
- BMP C122: Nets and Blankets
- BMP C123: Plastic Covering
- BMP C140: Dust Control

Element 6: Protect Slopes

No cut/fill slopes are proposed for the project. No BMP's are required.

In the event of a redesign or field revision the following will be applied to any slopes that are created. Cut and fill slopes shall be designed and constructed in a manner that will minimize erosion and comply with the City's applicable critical area regulations. Cut and fill slopes shall be protected from erosive and concentrated flows until permanent drainage conveyance systems are in place. Excavated material shall be placed on the uphill side of trenches, consistent with safety and space considerations.

Relevant BMPs:

- BMP C120: Temporary and Permanent Seeding
- BMP C208: Triangular Silt Dike (Geotextile-Encased Check Dam)
- BMPs C122 and C123 for nets and blankets and plastic covering.

Element 7: Protect Permanent Drain Inlets.

This element provides guidance and means to protect permanent storm drain inlets from sediment and silt-laden water. Permanent storm drain inlets operable on the site during construction shall be protected so that stormwater runoff does not enter the conveyance system without first being filtered or treated to remove sediment. Inlet protection devices shall be cleaned or removed and replaced when sediment has filled one-third of the available storage or as specified by the product manufacturer. They may be removed once the site is stabilized.

Relevant BMPs:

- BMP C220: Storm Drain Inlet Protection

Element 8: Stabilize Channels and Outlets

This element provides guidance and a means for stabilization of temporary and permanent (both proposed and pre-existing) conveyance systems for the prevention of erosion during and after construction. Stabilization includes armoring conveyance constituents so that they are adequate to prevent erosion. Conveyance elements include outlets, adjacent stream banks, slopes, channels, and downstream reaches.

Temporary conveyance channels would specify outlet protection to avoid erosion. A permanent overflow outlet utilizes rip-rap to prevent erosion by decreasing energy.

Relevant BMPs:

- BMP C201: Grass Lined Channels
- BMP C202: Channel Lining

Element 9: Control Pollutants

Appropriate pollution source control measures shall be implemented as applicable in areas of: construction equipment maintenance or fueling; handling or storage of waste materials, construction debris, fertilizers, chemicals; and other activities that may contribute pollutants to stormwater.

The following specific requirements apply:

- Cover, containment, and protection from vandalism shall be provided for all chemicals, liquid products, petroleum products, and other materials that have the potential to pose a threat to human health or the environment.
- On-site fueling tanks shall include secondary containment.
- Maintenance, fueling, and repair of heavy equipment and vehicles shall be conducted using spill prevention and control measures consistent with Volume IV, Chapters 2 and 3 of the 2019 SMMWW.
- Contaminated surfaces shall be cleaned immediately following any spill incident.
- Application of fertilizers and pesticides shall be conducted in a manner and at application rates that will not result in loss of chemical to stormwater runoff. Manufacturers' label requirements for application rates and procedures shall be followed.
- BMPs shall be used to prevent contamination of stormwater runoff by pH modifying sources. These sources include, but are not limited to: bulk cement, cement kiln dust, fly ash, new concrete washing approved treatment, curing waters, waste streams generated from concrete grinding and sawing, exposed aggregate processes, dewatering concrete vaults, concrete pumping, and mixer washout waters.

Relevant BMPs:

- BMP C151: Concrete Handling
- BMP C153: Material Storage, Delivery, and Containment

Element 10: Control Dewatering

Turbid or contaminated water shall be handled separately from stormwater. Contaminated water shall be collected for off-site disposal in a legal manner. Uncontaminated or clean water from dewatering systems for trenches, vaults and foundations may be disposed of by on-site infiltration, catch basin insert, or outfall to a swale for small volumes of water.

If dewatering is required for septic tank installation it is recommended that dewater is released to a brush barrier or level spreader to disperse into downslope brush/forest area.

Relevant BMPs:

- BMP C220 - Storm Drain Inlet Protection

Element 11: Maintain Best Management Practices.

BMPs shall be inspected and maintained by the property owner during construction and removed within 30 days after City determines that the site is stabilized, provided that temporary BMPs may be removed when they are no longer needed.

Element 12: Manage the Project.

The SWPPP shall be fully implemented at all times and modified when changes in design, construction, operation, or maintenance at the construction site that could have an effect on the discharge of pollutants to state waters.

Quantities of erosion prevention and sediment control materials shall be kept on the project site at all times to be used for emergency situations such as unexpected heavy summer rains. Having these materials on-site reduces the time needed to implement BMPs when inspections indicate that existing BMPs are not meeting the SWPPP requirements.

Relevant BMPs:

- BMP C150 materials on hand

Element 13: Protect On-site Stormwater Management BMPs for Runoff from Roofs and other Hard Surface

On-site Stormwater Management BMPs shall be protected at all times during the construction process. This may mean that stormwater management BMPs will be installed towards the end of the construction process to avoid siltation and compaction. BMPs include but are not limited to: full dispersion, roof downspout full infiltration or dispersion systems, perforated stubout connections, rain gardens, bioretention systems, permeable pavement, sheetflow dispersion, and concentrated flow dispersion. Additional requirements for on-site stormwater management BMPs are included in their respective sections of Volume V.

In particular, BMP T7.30 Bioretention Cells, Swales, and Planter Boxes in Section 7.3, Vol. V of the 2019 SMMWW. Areas to be used for Bio-retention shall be protected during construction and after construction. These areas are to be protected from compaction, siltation, and degradation.

Relevant BMPs:

- BMP C102: Buffer Zone
- BMP C103: High Visibility Fence
- BMP C201: Grass-lined Channels
- BMP C208: Triangular Silt Dike
- BMP C231: Brush Barrier
- BMP C233: Silt Fence
- BMP C234: Vegetated Strip

Sequence of BMP Implementation

Erosion control BMPs should be implemented in the following sequence:

1) Delineate or mark the following areas and features on the site:
   a) Clearing limits
   b) Critical areas and their buffers
   c) Erosion or landslide hazard areas and their setbacks
   d) Easements
   e) Required landscaping, and tree retention and replacement areas
   f) Other areas on the site required to be preserved or protected including, but not limited to, drainage courses
2) Provide parking area stabilization
3) Establish areas for storage and handling of pollution generating materials
4) Control BMPs will be implemented
5) Install sediment controls
6) Implement stabilization measures for disturbed areas, slopes, and material stockpiles
7) Maintain BMPs until final site stabilization

GENERAL NOTES

THE GENERAL CONTRACTOR IS TO PROVIDE SUBGRADES 4" BELOW HARD SURFACES PLUS/MINUS .1 FOOT.

ALL ROUGH GRADING SHALL BE POSITIVE, DRAINING AWAY FROM ALL STRUCTURES.

ALL STONES LARGER THAN 1.5" DIAMETER SHALL BE REMOVED FROM THE GROWING MEDIUM.

TOPSOIL SHALL BE PLACED AT A MINIMUM DEPTH OF 4" IN ALL LAWN AND BED AREAS.

TOPSOIL SHALL BE TILLED INTO THE EXISTING SUBGRADE TO ELIMINATE SOIL INTERFACE PROBLEMS.

TOPSOIL SHALL BE RED–E'S WINTER MIX OR APPROVED EQUAL.

ALL BED AREAS TO RECEIVE 2" OF FINE GROUND FIR OR HEMLOCK BARK, COMPOSITION MULCHES ARE NOT AN ACCEPTABLE ALTERNATIVE.

TREES AND SHRUBS ARE TO BE PLANTED AT A DEPTH 3/4" HIGHER THAN THE LEVEL THAT THEY WERE GROWN IN THE NURSERY.

BARK MULCH IS NOT TO BE PLACED ABOVE THE ROOT CROWN.

ALL PLANTS SHALL AT LEAST CONFORM TO THE MINIMUM STANDARD ESTABLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN.

LAWN AREAS ARE TO BE HYDROSEEDED WITH VAN DEN AKKER'S EMERALD VELVET MIX PER MANUFACTURER'S SPECIFICATIONS, OR APPROVED EQUAL. REMOVE ALL STONES LARGER THAN 1" FROM LAWN AREAS.

SUBSTITUTIONS ARE STRONGLY DISCOURAGED. IF PLANT AVAILABILITY IS A PROBLEM, CONTACT THE LANDSCAPE ARCHITECT FOR SOURCES OR ACCEPTABLE ALTERNATIVES.

IF THE SITE WORK IS DIFFERENT THAN SHOWN ON THE LANDSCAPE PLAN, OR POOR SOILS AND DEBRIS ARE DISCOVERED, REQUIRING CHANGES TO THE LANDSCAPE PLAN, CONTACT THE LANDSCAPE ARCHITECT FOR INSTRUCTION.

THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING THE LANDSCAPE DURING INSTALLATION, UNTIL FINAL ACCEPTANCE BY THE OWNER'S REPRESENTATIVE.

THE LANDSCAPE CONTRACTOR SHALL WARRANTY ALL MATERIALS AND WORKMANSHIP FOR A PERIOD OF ONE YEAR, FROM THE TIME OF FINAL ACCEPTANCE.

DURING THE WARRANTY PERIOD, THE LANDSCAPE CONTRACTOR WILL NOT BE RESPONSIBLE FOR PLANT DEATH CAUSED BY UNUSUAL CLIMATIC CONDITIONS, VANDALISM, THEFT, FIRE, OR POOR MAINTENANCE PRACTICES. THE LANDSCAPE ARCHITECT SHALL HAVE SOLE AUTHORITY TO DETERMINE THE CAUSE OF DEATH.

PLANT COUNTS PROVIDED ARE ESTIMATES ONLY. CONTRACTOR IS RESPONSIBLE FOR CALCULATING ALL FINAL AREA AND COUNTS.

LANDSCAPE PLANTING SCHEDULE

Landscape Maintenance Notes:

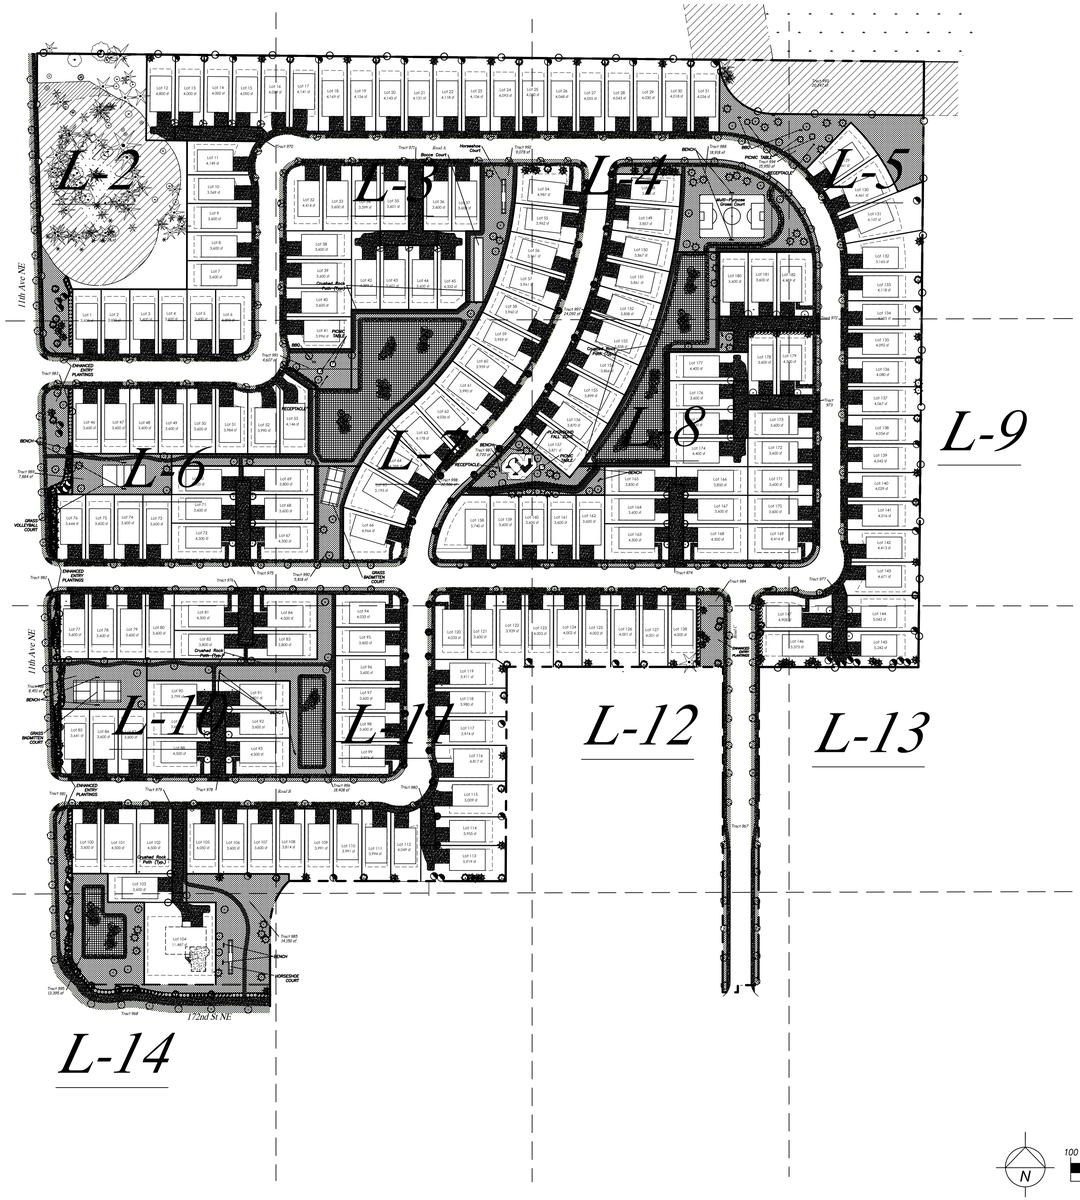
22C.120.180 Landscaping – Maintenance.

(1) All landscaped areas and plants required by this chapter must be permanently maintained in a healthy growing condition in order to accomplish the purpose for which they were required.

(2) Dead or diseased plants must be replaced within 30 days of notification, or as soon as practical in regard to freezing weather, or complex situations involving the removal and replacement of large trees.

(3) All landscaped areas must be kept free of debris and weeds.

(4) Plant material must not interfere with public utilities, restrict pedestrian or vehicular access, or constitute a traffic hazard.



(5) Planted areas next to pedestrian walkways and sidewalks shall be maintained or plant material chosen to maintain a clear zone between three and eight feet from ground level.

(6) The owners, their agents and assigns are responsible for providing, protecting, and maintaining all landscaping material in a healthy and growing condition, replacing it when necessary, and keeping it free of refuse and debris.

(7) All fencing, walls and other features used for screening purposes shall be kept free of litter, debris, and weeds. (Ord. 2852 § 10 (Exh. A), 2011).

IRRIGATION ASSESSMENT

SUPPLEMENTAL HAND WATERING MAY BE NECESSARY FOR THE FIRST GROWING SEASON TO ESTABLISH PLANTINGS, BUT MAY NOT BE NECESSARY IN SUBSEQUENT YEARS.

GENERAL NOTES

THE GENERAL CONTRACTOR IS TO PROVIDE SUBGRADES 4" BELOW HARD SURFACES PLUS/MINUS .1 FOOT.

ALL ROUGH GRADING SHALL BE POSITIVE, DRAINING AWAY FROM ALL STRUCTURES.

ALL STONES LARGER THAN 1.5" DIAMETER SHALL BE REMOVED FROM THE GROWING MEDIUM.

TOPSOIL SHALL BE PLACED AT A MINIMUM DEPTH OF 4" IN ALL LAWN AND BED AREAS.

TOPSOIL SHALL BE TILLED INTO THE EXISTING SUBGRADE TO ELIMINATE SOIL INTERFACE PROBLEMS.

TOPSOIL SHALL BE RED–E'S WINTER MIX OR APPROVED EQUAL.

ALL BED AREAS TO RECEIVE 2" OF FINE GROUND FIR OR HEMLOCK BARK, COMPOSITION MULCHES ARE NOT AN ACCEPTABLE ALTERNATIVE.

TREES AND SHRUBS ARE TO BE PLANTED AT A DEPTH 3/4" HIGHER THAN THE LEVEL THAT THEY WERE GROWN IN THE NURSERY.

BARK MULCH IS NOT TO BE PLACED ABOVE THE ROOT CROWN.

ALL PLANTS SHALL AT LEAST CONFORM TO THE MINIMUM STANDARD ESTABLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN.

LAWN AREAS ARE TO BE HYDROSEEDED WITH VAN DEN AKKER'S EMERALD VELVET MIX PER MANUFACTURER'S SPECIFICATIONS, OR APPROVED EQUAL. REMOVE ALL STONES LARGER THAN 1" FROM LAWN AREAS.

SUBSTITUTIONS ARE STRONGLY DISCOURAGED. IF PLANT AVAILABILITY IS A PROBLEM, CONTACT THE LANDSCAPE ARCHITECT FOR SOURCES OR ACCEPTABLE ALTERNATIVES.

IF THE SITE WORK IS DIFFERENT THAN SHOWN ON THE LANDSCAPE PLAN, OR POOR SOILS AND DEBRIS ARE DISCOVERED, REQUIRING CHANGES TO THE LANDSCAPE PLAN, CONTACT THE LANDSCAPE ARCHITECT FOR INSTRUCTION.

THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING THE LANDSCAPE DURING INSTALLATION, UNTIL FINAL ACCEPTANCE BY THE OWNER'S REPRESENTATIVE.

THE LANDSCAPE CONTRACTOR SHALL WARRANTY ALL MATERIALS AND WORKMANSHIP FOR A PERIOD OF ONE YEAR, FROM THE TIME OF FINAL ACCEPTANCE.

DURING THE WARRANTY PERIOD, THE LANDSCAPE CONTRACTOR WILL NOT BE RESPONSIBLE FOR PLANT DEATH CAUSED BY UNUSUAL CLIMATIC CONDITIONS, VANDALISM, THEFT, FIRE, OR POOR MAINTENANCE PRACTICES. THE LANDSCAPE ARCHITECT SHALL HAVE SOLE AUTHORITY TO DETERMINE THE CAUSE OF DEATH.

PLANT COUNTS PROVIDED ARE ESTIMATES ONLY. CONTRACTOR IS RESPONSIBLE FOR CALCULATING ALL FINAL AREA AND COUNTS.

GENERAL NOTES

THE GENERAL CONTRACTOR IS TO PROVIDE SUBGRADES 4" BELOW HARD SURFACES PLUS/MINUS .1 FOOT.

ALL ROUGH GRADING SHALL BE POSITIVE, DRAINING AWAY FROM ALL STRUCTURES.

ALL STONES LARGER THAN 1.5" DIAMETER SHALL BE REMOVED FROM THE GROWING MEDIUM.

TOPSOIL SHALL BE PLACED AT A MINIMUM DEPTH OF 4" IN ALL LAWN AND BED AREAS.

TOPSOIL SHALL BE TILLED INTO THE EXISTING SUBGRADE TO ELIMINATE SOIL INTERFACE PROBLEMS.

TOPSOIL SHALL BE RED–E'S WINTER MIX OR APPROVED EQUAL.

ALL BED AREAS TO RECEIVE 2" OF FINE GROUND FIR OR HEMLOCK BARK, COMPOSITION MULCHES ARE NOT AN ACCEPTABLE ALTERNATIVE.

TREES AND SHRUBS ARE TO BE PLANTED AT A DEPTH 3/4" HIGHER THAN THE LEVEL THAT THEY WERE GROWN IN THE NURSERY.

BARK MULCH IS NOT TO BE PLACED ABOVE THE ROOT CROWN.

ALL PLANTS SHALL AT LEAST CONFORM TO THE MINIMUM STANDARD ESTABLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN.

LAWN AREAS ARE TO BE HYDROSEEDED WITH VAN DEN AKKER'S EMERALD VELVET MIX PER MANUFACTURER'S SPECIFICATIONS, OR APPROVED EQUAL. REMOVE ALL STONES LARGER THAN 1" FROM LAWN AREAS.

SUBSTITUTIONS ARE STRONGLY DISCOURAGED. IF PLANT AVAILABILITY IS A PROBLEM, CONTACT THE LANDSCAPE ARCHITECT FOR SOURCES OR ACCEPTABLE ALTERNATIVES.

IF THE SITE WORK IS DIFFERENT THAN SHOWN ON THE LANDSCAPE PLAN, OR POOR SOILS AND DEBRIS ARE DISCOVERED, REQUIRING CHANGES TO THE LANDSCAPE PLAN, CONTACT THE LANDSCAPE ARCHITECT FOR INSTRUCTION.

THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING THE LANDSCAPE DURING INSTALLATION, UNTIL FINAL ACCEPTANCE BY THE OWNER'S REPRESENTATIVE.

THE LANDSCAPE CONTRACTOR SHALL WARRANTY ALL MATERIALS AND WORKMANSHIP FOR A PERIOD OF ONE YEAR, FROM THE TIME OF FINAL ACCEPTANCE.

DURING THE WARRANTY PERIOD, THE LANDSCAPE CONTRACTOR WILL NOT BE RESPONSIBLE FOR PLANT DEATH CAUSED BY UNUSUAL CLIMATIC CONDITIONS, VANDALISM, THEFT, FIRE, OR POOR MAINTENANCE PRACTICES. THE LANDSCAPE ARCHITECT SHALL HAVE SOLE AUTHORITY TO DETERMINE THE CAUSE OF DEATH.

PLANT COUNTS PROVIDED ARE ESTIMATES ONLY. CONTRACTOR IS RESPONSIBLE FOR CALCULATING ALL FINAL AREA AND COUNTS.

GENERAL NOTES

THE GENERAL CONTRACTOR IS TO PROVIDE SUBGRADES 4" BELOW HARD SURFACES PLUS/MINUS .1 FOOT.

ALL ROUGH GRADING SHALL BE POSITIVE, DRAINING AWAY FROM ALL STRUCTURES.

ALL STONES LARGER THAN 1.5" DIAMETER SHALL BE REMOVED FROM THE GROWING MEDIUM.

TOPSOIL SHALL BE PLACED AT A MINIMUM DEPTH OF 4" IN ALL LAWN AND BED AREAS.

TOPSOIL SHALL BE TILLED INTO THE EXISTING SUBGRADE TO ELIMINATE SOIL INTERFACE PROBLEMS.

TOPSOIL SHALL BE RED–E'S WINTER MIX OR APPROVED EQUAL.

ALL BED AREAS TO RECEIVE 2" OF FINE GROUND FIR OR HEMLOCK BARK, COMPOSITION MULCHES ARE NOT AN ACCEPTABLE ALTERNATIVE.

TREES AND SHRUBS ARE TO BE PLANTED AT A DEPTH 3/4" HIGHER THAN THE LEVEL THAT THEY WERE GROWN IN THE NURSERY.

BARK MULCH IS NOT TO BE PLACED ABOVE THE ROOT CROWN.

ALL PLANTS SHALL AT LEAST CONFORM TO THE MINIMUM STANDARD ESTABLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN.

LAWN AREAS ARE TO BE HYDROSEEDED WITH VAN DEN AKKER'S EMERALD VELVET MIX PER MANUFACTURER'S SPECIFICATIONS, OR APPROVED EQUAL. REMOVE ALL STONES LARGER THAN 1" FROM LAWN AREAS.

SUBSTITUTIONS ARE STRONGLY DISCOURAGED. IF PLANT AVAILABILITY IS A PROBLEM, CONTACT THE LANDSCAPE ARCHITECT FOR SOURCES OR ACCEPTABLE ALTERNATIVES.

IF THE SITE WORK IS DIFFERENT THAN SHOWN ON THE LANDSCAPE PLAN, OR POOR SOILS AND DEBRIS ARE DISCOVERED, REQUIRING CHANGES TO THE LANDSCAPE PLAN, CONTACT THE LANDSCAPE ARCHITECT FOR INSTRUCTION.

THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING THE LANDSCAPE DURING INSTALLATION, UNTIL FINAL ACCEPTANCE BY THE OWNER'S REPRESENTATIVE.

THE LANDSCAPE CONTRACTOR SHALL WARRANTY ALL MATERIALS AND WORKMANSHIP FOR A PERIOD OF ONE YEAR, FROM THE TIME OF FINAL ACCEPTANCE.

DURING THE WARRANTY PERIOD, THE LANDSCAPE CONTRACTOR WILL NOT BE RESPONSIBLE FOR PLANT DEATH CAUSED BY UNUSUAL CLIMATIC CONDITIONS, VANDALISM, THEFT, FIRE, OR POOR MAINTENANCE PRACTICES. THE LANDSCAPE ARCHITECT SHALL HAVE SOLE AUTHORITY TO DETERMINE THE CAUSE OF DEATH.

PLANT COUNTS PROVIDED ARE ESTIMATES ONLY. CONTRACTOR IS RESPONSIBLE FOR CALCULATING ALL FINAL AREA AND COUNTS.

STATEMENT OF INTENT

It is the Applicants intent to Subdivide the property into Fee Simple lots for Detached Single Family homes

LOTS NOTE

All lots under 5,000 square feet are subject to the Small lot single family dwelling development standards set forth in MMC 22C.010.310.

HOUSING MIX RATIO

Proposal - 100% Single Family Detached Homes

RESIDENTIAL BONUS INCENTIVES (MMC 22C.090)

	Benefit	Density incentive	Provided	Bonus yield
3	**Community image and identity**			
3a.	Contribution towards an identified capital improvement project, including, but not limited to, parks, roadways, bicycle facilities, pedestrian facilities, multi-use trails, gateway sign, etc.	$25,000 per bonus unit. Bonus units may only be claimed in whole numbers or 0.5 bonus unit increments.	0	0.0
5	**Locational/mixed use**			
5a.	a. Developments located within one-quarter mile of transit routes, and within one mile of fire and police stations, medical, shopping, and other community services.	5 percent increase above the base density of the zone		7.7
6	**Storm drainage facilities Dual use retention/detention facilities**			
6a.	Developments that incorporate active recreation facilities that utilize the storm water facility tract.	5 bonus units per acre of the storm water facility tract used for active recreation.	0.50 ac	2.5
6b.	Developments that incorporate passive recreation facilities that utilize the storm water facility tract.	2 bonus units per acre of the storm water facility tract used for passive recreation.	2.58 ac	5.2
7	**Project design**			
7c.	Installation of perimeter fencing or landscaping, in order to improve design or compatibility between neighboring land uses. This benefit shall not be pursued when any of the following circumstances apply: (i) fencing or landscaping is otherwise required by code, or (ii) landscaping is voluntarily provided in order to deviate from other code requirements.	1 bonus unit per 500 lineal feet of perimeter fencing or landscaping installed (when not otherwise required by code).	4,275 lf	8.6
7e.	Private park and open space facilities integrated into project design	5 bonus units per improved acre of park and open space area. Ongoing facility maintenance provisions are required as part of RDI approval.	3.34 ac	16.71
7f.	Enhanced entry landscaping	1 bonus unit per 2,500 square feet of additional enhanced entry landscaped area (when not otherwise required by code). A minimum of 1,000 square feet of entry landscaping of exceptional, outstanding or unique design, as determined by the director, must be provided in order to qualify for this benefit.	19,867 sf	7.9
			Total bonus	48.5
			Max bonus (20% Base)	30.7
			Base density	153
			Total yield	**183**

OPEN SPACE ANALYSIS

Net project area		1,027,169 sf	(23.58 ac)
Minimum open space (OS) required	15.0%	154,075 sf	(3.54 ac)
Minimum active open space	35% of Required OS	53,926 sf	(1.24 ac)

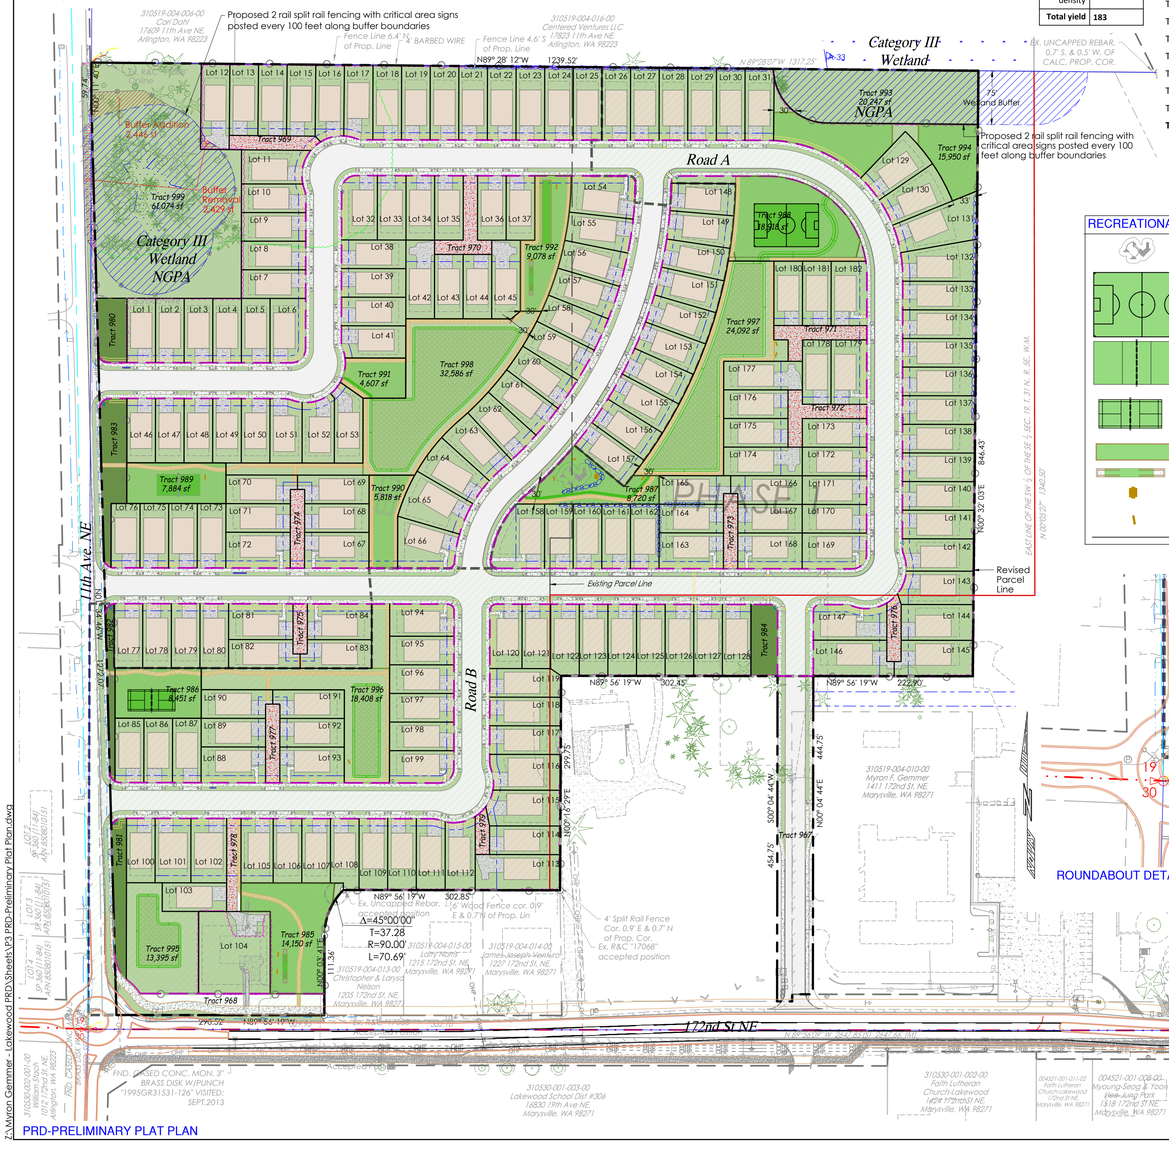
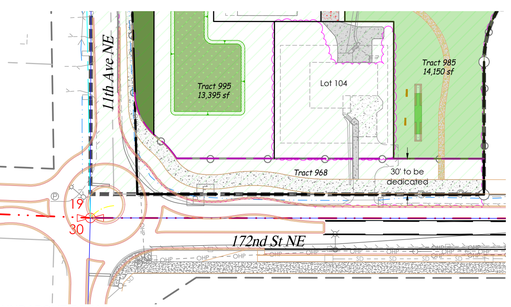
Total site area	1,283,961 sf	(29.48 ac)



SLOPE ANALYSIS

Slopes vary across the site, with the steepest slopes (up to 10%) in the northeast portion of the site. Slopes typically range from 0 to 10%. Average slope is 3.89%. Site slopes generally downward from the west to east.



There are no indications of unstable slopes on the site.

Slope analysis based on T.I.N. triangle slopes of the LiDAR surface:

Range	Area (sf)
0% - 5%	1,038,085 sf
5% - 10%	252,507 sf
10% - 15%	0 sf
15% - 33%	0 sf
33% +	0 sf
Total =	1,283,961 sf (29.48 ac)

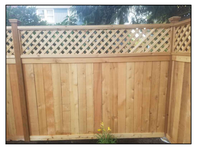
large Open Active Surface Biocell suitable for many lawn sports such as Bocce Ball, Croquet, or many net sports also. This area is graded even for, Biddy Soccer, Whiffle Ball or even Flag football. The active surface has been properly seeded with Microclover.

Family playing Volleyball on Thanksgiving at one of our Biocells with surface prepared for Active Use. Numerous net sports can be played in these open grass activity areas.

This active surface was split with Horseshoe Pits and Landscape area. Other lawn sports are an option for this site also.



Some Field Sports: Family Soccer, Flag Football, Kick Ball, Dodge Ball and Whiffle Ball

Family Playing badminton on Grass " Court" similar to proposed uses of the Biocells.

Fences along lots that back up to Open Space will have 3 to 4 feet of solid board with 2 to 3 feet of open lattice above the solid fence. This is to allow for surveillance of Open Space Residents in the Community. Examples shown are concept, specifications will come with Engineering Plan submittals.

Amenity points provided	Amenity quantity	Amenities provided	Amenity points
Small amenities			
Net sport courts	3	3	
Benches	10	5	
Picnic table	1	1

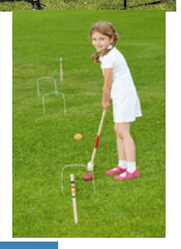
Soccer/football field	1	1	
Tot lot	1	1	
Total large amenities		2	2 Amenity points
Total amenity points provided			**8 Amenity points**
Amenity points required			**7 Amenity points**
Total active open space provided		1.74 ac	7 (1/4 acre Amenities)

Volley Ball Grass " Court" similar to proposed uses of the Biocells.



Kids playing Crossnet -4 on Grass " Court" as another option for our athletic prepared surfaces for our Bio-cells.

"Serious" Croquet players as an option for our Biocell surfaces.

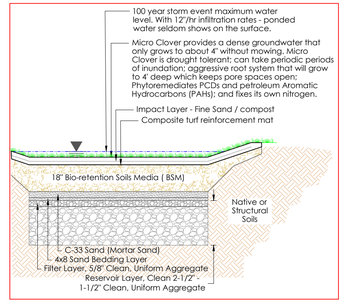
Family Fun Croquet players as an option for our biocell surfaces.

Family Playing Bocce Ball on Open Grass Area

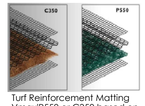
The Biocell surfaces can be finely maintained to provide for the serious Bocce Ball enthusiast.

NOTE:

9. Pursuant to MMC 22G.080.100(4)(e), open space shall include a minimum of one large recreational amenity or two small recreational amenities per one-quarter acre of active recreation space. Small recreational amenities include commercial-grade benches, picnic tables, small play equipment, and similar amenities. Large recreational amenities include commercial-grade half sport courts, large play equipment, gazebos, and similar amenities. Please provide the total number of large and small amenities to be provided.



ACTIVE OPEN SPACE REQUIRED 1.24 Acres = 5-1/4 Acres
Requires: 5 Large Recreational Amenities and 10 Small Recreational Amenities.
Providing: 8 Large Recreational Amenities and 12 Small Recreational Amenities.



1 - Large Reinforced Grass Turf areas for multi-sport type activities.
1 - Grass Reinforced Soccer Field
1 - Grass Reinforced Volley Ball Court
1 - Grass Reinforced Badminton Court
2 - Bocce Ball / Lawn Bowling Lanes
1 - Horseshoe Pit
1 - Large Play Equipment
11 - Commercial-grade Benches
1 - Picnic Table

GAMES AND ACTIVITIES THAT CAN BE PLAYED ON OPEN GRASS AREAS.

Net Sports *from Badminton to Volley Ball (Crossnet 4 Square—unique four "team" court. Spike Ball*
Soccer *—Biddy Soccer—Family Soccer*
Mini Field Hockey
Kickball
Dodgeball
Kick Pool *—like pool but on grass with numbered balls and kicking the cue ball to a "pocket"*
Crochet *—traditional or a "pool table" version as in Kick Pool*
Bocce Ball *now becoming popular along with* ***Lawn Bowling***
Frisbee *—Kan Jam*
Tag Games *—capture the flag, kick the can, Red Rover*
Whiffle Ball
Horseshoes *with formal sand pit or Rubber Horseshoe set made for lawns*
Cornhole *—for some reason, in spite of the name, this has become a popular outdoor activity*
Yard Dice Games
Kubb *—lawn game combo like horseshoes-lawn bowling-Chess for singles or family play.*
Molkky *—version of "bowling" using a wooden pin to knock over numbered wooden pins to reach a score*
Lawn Darts *(safety tips)*
Untold others

ADDED SURFACING FOR ACTIVE USE BIOCELLS

Turf Reinforcement Matting VmaxP550 or C350 based on anticipated use.

SURFACES AVAILABLE FOR PLAY:
As a stormwater management facility, the question often comes up about availability of the Active Use Areas during rainy seasons. The "Biocell" component primarily provides treatment of stormwater by infiltrating water through filter medium which includes 6 layers totaling about 28 inches. Ponded water for detention or surcharge for infiltration is held in the Washed Ballast or rock chamber. Infiltration rates through the Biocell is typically 12 inches per hour so water discharged to the surface is quickly infiltrated to the rock chamber below. In twelve years of designing these facilities, I have not seen water ponded on the surfaces during the winter - wet surfaces would never be an issue. These surfaces, during heavy rains, are designed for wet weather and would be more usable than most playfields during heavy rain events.
When it is raining "that" hard - most people would not be looking to be playing on any field outside.

7	**Project Design**			
7c.	Installation of perimeter fencing or landscaping, in order to improve design or compatibility between neighboring land uses. This benefit shall not be pursued when any of the following circumstances apply: (i) fencing or landscaping is otherwise required by code, or (ii) landscaping is voluntarily provided in order to deviate from other code requirements.	1 bonus unit per 500 lineal feet of perimeter fencing or landscaping installed (when not otherwise required by code).	1,567 lf	3.1
7f.	Enhanced entry landscaping	1 bonus unit per 2,500 square feet of additional enhanced entry landscaped area (when not otherwise required by code). A minimum of 1,000 square feet of entry landscaping of exceptional, outstanding or unique design, as determined by the director, must be provided in order to qualify for this benefit.	10,011 sf	4.0
			Total Bonus	16.1
			Max Bonus (20% Base)	16.7
			Base Density	84
			Total Yield	**99**

CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. CONFORMANCE OF THIS DESIGN WITH ALL APPLICABLE LAWS AND REGULATIONS IS THE FULL AND COMPLETE RESPONSIBILITY OF THE LICENSED DESIGN ENGINEER, WHOSE STAMP AND SIGNATURE APPEAR ON THIS SHEET. ACKNOWLEDGMENT OF CONSTRUCTION DRAWING REVIEW DOES NOT IMPLY CITY APPROVAL FOR CONSTRUCTION ACTIVITIES THAT REQUIRED OTHER COUNTY, STATE OR FEDERAL PERMIT REVIEW AND APPROVAL. THE PROPERTY OWNER AND LICENSED DESIGN ENGINEER SHALL BE RESPONSIBLE FOR THE ACQUISITION AND COMPLIANCE OF ALL APPLICABLE PERMITS OR AUTHORIZATIONS WHICH MAY INCLUDE BUT ARE NOT LIMITED TO: WSDFW HYDRAULIC PROJECT APPROVAL (HPA), WSDOE NOTICE OF INTENT (NOI), ANY CORPS OF ENGINEERS FILL PERMITS AND THE REQUIREMENTS OF THE ENDANGERED SPECIES ACT. THIS ____ DAY OF _____, 202_.

JOSH KING, P.E., DEVELOPMENT SERVICES MANAGER

THESE APPROVED CONSTRUCTION PLANS EXPIRE AFTER PERIOD OF 60 MONTHS FROM THE DATE SHOWN ABOVE OR UPON EXPIRATION OF PRELIMINARY PLAT OR SITE PLAN APPROVAL, PER MMC 22A.040.020 & 22A.040.030.

AQUIFER RECHARGE/ WELL HEAD PROTECTION

Low Aquifer Sensitivity

SOILS

Alderwood Gravelly Sandy Loam;
Hydrologic Soil Group: B
Compact Fill Area to 95% Modified Proctor

UTILITIES NOTE

All power lines, telephone wires, television cables, fire alarm systems and other communication wires, cables or lines shall be placed underground either by direct burial or by means of conduit or ducts providing service to each building.
Any existing on-site septic systems or wells shall be abandoned in accordance with Snohomish Health District requirements.

GENERAL NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities. The contractor shall verify the location of all existing utilities prior to any construction. Agencies shall be notified within a reasonable time prior to the start of construction.

SEWER SYSTEM NOTES

1. Sanitary sewer pipe and side sewers shall be 10 feet away from building foundations and/or roof lines.
2. No side sewers shall be connected to any house or building until all manholes are adjusted to the finished grade of the completed asphalt roadway and the asphalt patch and seal around the ring are accepted.
3. After all other utilities are installed and prior to asphalt work, all sanitary pipes shall pass a low pressure air test in accordance with Section 7-17 of the "Standard Specifications". Products used to seal the inside of the pipe are not to be used to obtain the air test.
4. For commercial developments in which sources of grease and/or oils may be introduced to the City sanitary sewer system, a City approved grease interceptor shall be installed downstream from the source.
5. The City of Marysville Community Development Department shall be notified a minimum of 48 hours in advance of a tap or connection to an existing sanitary sewer main. The inspector shall be present at the time of the tap or connection.
6. The Contractor shall be fully responsible for the location and protection of all existing utilities. The Contractor shall verify all utility locations prior to construction by calling the Underground Locate Line at 1-800-424-5555 a minimum of 48 hours prior to any excavation.
7. Gravity sewer main with ::5' of cover shall be D.I.P. Class 52; 5'-18' of cover shall be PVC, ASTM D 3034 SDR 35, or ASTM F 789 with joints and rubber gaskets conforming to ASTM D 3212 and ASTM F 477; ::18' cover shall be D.I.P. Class 52, or C-900.
8. Precast manholes shall meet the requirements of ASTM C 478. Manholes shall be Type 1-48" manhole unless otherwise specified on the plans. Joints shall be rubber gasketed conforming to ASTM C 443 and shall be grouted from the inside. Lift holes shall be grouted from the outside and inside of the manhole.
9. Side sewer services shall be PVC, ASTM D 3034 SDR 35 with flexible gasketed joints. Side sewer connections shall be made by a tap to an existing main or a tee from a new main connected above the springline of the pipe.
10. All sewer mains shall be field staked for grades and alignment prior to construction by a licensed engineer or surveying firm qualified to perform such work. Prior to constructing any sewer, the lot corners shall be staked and sewer line location established by survey. cost of which shall be borne by the Developer.
11. All plastic pipe and services shall be installed with continuous tracer tape installed 12" to 18" under the proposed finished subgrade. The marker shall be plastic non-biodegradable, metal core or backing marked sewer which can be detected by a standard metal detector.
12. Each side sewer lateral shall have a 2" x 4" wood "marker" at the termination of the stub. The "marker" shall extend from the trench to above finished grade. Above the ground surface, it shall be painted "green" with SEWER and the depth, in feet, stenciled in white letters 2" high.
13. Side sewers shall be installed by the Developer and coordinated for clearance with power, telephone, and other utilities.
14. All side sewers to be installed 10 feet into lot served and staked and marked as shown on these plans.
15. Pipe bedding shall be in accordance with WSDOT Standard Plan B-18c Class F. Pea gravel is an acceptable bedding material. All pipe shall be laid on a properly prepared foundation according to Standard Specification 7-02.3(1). This shall include necessary leveling of the trench bottom or the top of the foundation materials as well as placement and compaction of required bedding material to uniform grade so that the entire length of the pipe will be supported an a uniformly dense unyielding base.
16. A 6-foot square X 4-inch thick concrete pad shall be installed around all SSMH'S and a 3-foot square X 4-inch thick concrete pad shall be installed around all cleanouts that are not in a pavement area.
17. All lines shall be cleaned and pressure tested prior to paving in conformance with the above referenced specifications. Testing of the sanitary sewer main shall include TV-ing of the main by the Contractor. Immediately prior to TV-ing, enough water shall be run down the line so it comes out the lower manhole. A copy of the video tape shall be submitted to the City of Marysville. Acceptance of the line will be made after the tape has been reviewed and approved by Public Works. A water test of all manholes in accordance with Marysville standard may also be required. Testing shall take place after all underground utilities are installed and compaction of the roadway subgrade is completed.
18. Prior to backfill all mains and appurtenances shall be inspected and approved by the City of Marysville Department of Public Works. Approval shall not relieve the Contractor for correction of any deficiencies and/or failures as determined by subsequent testing and inspections. It shall be the Contractor's responsibility to notify the City of Marysville for the required inspections

WATER SYSTEM NOTES

1. Biological test samples will be taken by the City (or FMWC, VW or TCW when served by that purveyor) and paid for by the contractor.
2. Water mains shall have a minimum cover of 36 inches in improved right-of-way and a minimum of 48 inches in unimproved right-of-way and easements.
3. Pipe for water mains shall be ductile iron conforming to Section 7-09 of the Standard Specifications, Class 52 with tyton or approved equal joints. Pipe shall be cement lined in accordance with A.S.A. Specification A 21.4-1964.
4. Connections to existing water mains shall typically be wet taps through a tapping 'tee' and tapping valve and shall be made by a City-approved contractor. The tapping sleeve shall be epoxy coated or ductile iron. Stainless sleeves shall only be used on AC pipe. The City (or FMWC, VW or TCW when served by that purveyor) shall approve the time and location for these connections.
5. All water mains and appurtenances shall be hydrostatically tested at 200 psi in accordance with City Standards.
6. Fire hydrants shall be installed in accordance with City Standard Detail 2-060-001 and as directed by the City of Marysville Fire Code Official.
7. Valve marker posts shall be installed where valve boxes are hidden from view or in unpaved areas.
8. Resilient seated wedge gate valves shall be used for 10-inch mains and smaller. Butterfly valves shall be used for mains greater than 10 inches.
9. Pipe fitting for water mains shall be ductile iron and shall be mechanical joint conforming to AWWA Specification C111-72.
10. Water main pipe and service connections shall be a minimum of 10 feet away from building foundations and/or roof lines.
11. Where a water main crosses the Northwest Gas pipeline, the water line shall be cased with PVC pipe a minimum of 10 feet beyond each side of the gas line easement. Contact Williams Northwest Pipeline before the crossing is made.
12. Trenching, bedding, and backfill for water mains shall be installed in accordance with City Standard Detail 3-703-002 and-003.
13. All commercial and industrial developments, irrigation systems, and multi-family water service connections shall be protected by a double check valve assembly or a reduced pressure backflow assembly as directed by the City conforming to City Standard Details 2-153-001.
14. Any lead joint fitting disturbed during construction shall be replaced with a mechanical joint fitting at the contractor's expense.

ARCHAEOLOGICAL RESOURCES NOTE

The Department of Archaeology and Historic Preservation's (DAHP) Inadvertent Discovery Plan shall be followed during site construction. If at any time during construction archaeological resources are observed on the project area, work shall be temporarily suspended at the location of discovery and a professional archaeologist should document and assess the discovery. The DAHP and all concerned tribes should be contacted for any issues involving Native American sites. If project activities expose human remains, either in the form of burials or isolated bones or teeth, or other mortuary items, work in that area should be stopped immediately. Local law enforcement, DAHP, and affected tribes should be immediately contacted. No additional excavation should be undertaken until a process has been agreed upon by these parties, and no exposed human remains should be left unattended.

CONTRACTOR NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities.

CALL AT LEAST 2 BUSINESS DAYS BEFORE YOU DIG 1-800-424-5555

GENERAL NOTES

1. All work in City right-of-way requires a permit from the City of Marysville. Prior to any work commencing, the general contractor shall arrange for a preconstruction meeting at the Development Services Center to be attended by all contractors that will perform work shown on the approved engineering plans, representatives from all applicable utility companies, the project owner and appropriate city staff. Contact Development Services at (360-363-8100) to schedule the meeting. The contractor is responsible to have their own set of approved plans at the meeting.
2. After completion of all items shown on these plans and before acceptance of the project the contractor shall obtain a "punch list" prepared by the City's inspector detailing remaining items of work to be completed. All items of work shown on these plans shall be completed to the satisfaction of the City prior to acceptance of the water, sanitary sewer and storm systems.
3. All materials and workmanship shall conform to the Standard Specifications for Road, Bridge, and Municipal Construction (hereinafter referred to as the "Standard Specifications"), Washington State Department of Transportation and American Public Works Association, Washington State Chapter, latest edition, unless superseded or amended by the City of Marysville City Engineering Design and Development Standards (hereinafter referred to as the "City Standards").
4. All work within the development and City right-of-way shall be subject to the inspection of the City engineer or designated representative.
5. Prior to any site construction including clearing/logging or grading, the site clearing limits shall be located and field identified by the project surveyor (or project engineer) as required by these plans. The project surveyor's name and phone number is Darren Riddle, 425.512.7099.
6. The developer, contractor and project engineer is responsible for water quality as determined by the monitoring program established by the project engineer. The project engineer's name and phone number is Tyler Foster, 360.652.9727.
7. The contractor shall be responsible for obtaining all permits for utility, road, and right-of-way construction. The contractor for this project is _____. Contact person is _____. Phone _____. Mobile phone _____. emergency phone _____.
8. The Construction Stormwater Pollution Prevention Plan (SWPPP) Best Management Practices (BMP's) shall be constructed in accordance with the approved SWPPP prior to any grading or extensive land clearing. These facilities must be satisfactorily maintained until construction and landscaping is completed and final stabilization has occurred. Sediment laden waters shall not enter the city stormwater drainage system or a natural drainage system.
9. The contractor shall keep two sets of plans on site at all times for recording record drawing information; one set shall be submitted to the project engineer, and one set shall be submitted to the City engineer at completion of construction and prior to final acceptance of work.
10. Prior to construction the owner and/or contractor shall notify the project engineer and the City engineer when conflicts exist between the plans and field conditions. Conflicts shall be resolved (including plan and profile revisions) and resubmitted for approval prior to proceeding with construction.
11. Any revisions made to these plans, or changes to the design must be reviewed and approved by the developer's engineer and the City prior to any implementation in the field. The City shall not be responsible for any errors and/or omissions on these plans.
12. The contractor shall have all utilities verified on the ground prior to any construction. Call (811) at least two working days in advance. Prior to construction the owner and/or contractor shall notify the project engineer and the City engineer when conflicts exist between the plans and field conditions. Conflicts shall be resolved (including plan and profile revisions) and resubmitted for approval prior to proceeding with construction.
13. City of Marysville horizontal datum shall be NAD 83, and the vertical datum shall be NAVD 88, in Washington State Plane Coordinates (feet), Washington North Zone 4601. A list of benchmarks is available through the Public Works Department.
14. Temporary street patching shall be allowed for as approved by the City Engineer. Temporary street patching shall be provided by placement and compaction of ATB or Class B asphalt concrete. Contractor shall be responsible for maintenance as required.
15. Provide traffic control plan(s) in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) as required.
16. It shall be the responsibility of the Contractor to have a copy of these approved plans on construction site at all times.
17. Any structure and/or obstruction that requires removal or relocation relating to this project shall be done so at the developer's expense.
18. Locations of existing utilities are approximate. It shall be the contractor's responsibility to determine the true elevations and locations of hidden utilities. All visible items shall be the engineer's responsibility. Location of utilities shown on construction plans are based on best records available and are subject to variation. For assistance in utility location, call 1-800-4245555.
19. The contractor shall install, replace, or relocate all signs, as shown on the plans or as affected by construction, per City Standards.
20. Power, street light, cable, and telephone lines shall be in a trench located within a 10-foot utility easement adjacent to public right-of-way. Right-of-way crossings shall have a minimum horizontal separation from other utilities (sewer, water, and storm) of 5 feet.
21. All construction surveying for extensions of public facilities shall be done under the direction of a Washington State licensed land surveyor or a Washington State licensed professional civil engineer.
22. During construction, all public streets adjacent to this project shall be kept clean of all material deposits resulting from on-site construction, and existing structures shall be protected as directed by the City.
23. Certified record drawings are required prior to project acceptance.
24. A NPDES Stormwater General Permit may be required by the Department of Ecology for this project. For information visit the Department of Ecology web site www.ecy.wa.gov/programs/wq/stormwater/construction/.
25. Any disturbance or damage to Critical Areas and associated buffers, or significant trees designated for preservation and protection shall be mitigated in accordance with a Mitigation Plan reviewed and approved by the City's Planning Division. Preparation and implementation of the Mitigation Plan shall be at the developer's expense.
26. A grading permit issued pursuant to the current adopted International Building Code, and approval of the temporary erosion and sedimentation control plan shall be obtained from the Community Development Department prior to any on-site grading work not expressly exempt by the current adopted International Building Code.
27. Prior to commencement of framing, final drainage inspection and approval of the roof leader and positive footing systems shall be completed by the Building Department. Call 360-363-8100 to schedule the inspection.

CONSTRUCTION SEQUENCE

1. Arrange and attend a pre-construction meeting with City staff, the on-site erosion control specialist, the design engineer, and owner.
2. Identify clearing limits and stream/wetland NGPA areas as required with flagging and/or temporary orange construction fence. Wetland buffer marking is to be checked by wetland consultant (or the county) before clearing begins.
3. Install construction zone road signs.
4. Grade and install construction entrance(s).
5. Place silt fence, straw bales, etc. as necessary to prevent sediment-laden runoff from leaving site.
6. Provide protection for existing offsite catch basins and other drainage facilities.
7. Grade and stabilize roads and interceptor swales in conjunction with clearing and grading activity.
8. Install temporary sedimentation measures.
9. Clear and grub site. Complete mass grading. Reconstruct sediment-trapping measures as grading progresses. Relocate surface water controls and erosion control measures, or install new measures as site conditions change so as to maintain compliance with City of Marysville standards.
10. Final grade, construct and pave roadways. Ensure that the permanent drainage system is complete and functional.
11. Remove any temporary sediment controls when permanent drainage is complete and erosion measures are in place and functional. Add topsoil to planting areas. Plant rain gardens and wetland areas in accordance with landscape and wetland mitigation plans.
12. Remove remaining temporary erosion control measures when danger of erosion has passed and site is stabilized with final City approval.

GRADING, EROSION AND SEDIMENTATION CONTROL NOTES

1. All limits of clearing and areas of vegetation preservation as prescribed on the plans shall be clearly flagged in the field and observed during construction.
2. All required sedimentation and erosion control facilities must be constructed and in operation prior to any land clearing and/or other construction to ensure that sediment laden water does not enter the natural drainage system. The contractor shall schedule an inspection of the erosion control facilities prior to any land clearing and/or other construction. All erosion and sediment facilities shall be maintained in a satisfactory condition as determined by the City, until such time that clearing and/or construction is completed and final stabilization has occurred. The implementation, maintenance, replacement and additions to the erosion and sedimentation control systems shall be the responsibility of the permittee.
3. The erosion and sedimentation control system facilities depicted on these plans are intended to be minimum requirements to meet anticipated site conditions. As construction progresses and unexpected or seasonal conditions dictate, facilities will be necessary to ensure complete siltation control on the site. During the course of construction, it shall be the obligation and responsibility of the permittee to address any new conditions that may be created by his activities and to provide additional facilities, over and above the minimum requirements, as may be needed to protect adjacent properties, sensitive areas, natural water courses, and/or storm drainage systems..
4. Approval of these plans is for grading, temporary drainage, erosion and sedimentation control only. It does not constitute an approval of permanent storm drainage design, size or location of pipes, restrictors, channels, or retention facilities.
5. Any disturbed area which has been stripped of vegetation and where no further work is anticipated for the time period set forth by the SWPPP, must be immediately stabilized with mulching, grass planting, or other approved erosions control treatment applicable to the time of year in question. During the dry season (May 1 - September 30) soils may be exposed and unworked for 7 days. During the wet season (October 1 - April 30) soils may be exposed and unworked for 2 days. Grass seeding alone will be acceptable only during the dry season. Seeding may proceed outside the specified time period whenever it is in the interest of the permittee but augmented with mulching, netting, or other treatment approved by the City.
6. In case erosion or sedimentation occurs to adjacent properties, all construction work within the development that will further aggravate the situation must cease, and the owner/contractor will immediately commence restoration methods. Restoration activity will continue until such time as the affected property owner is satisfied.
7. Stockpiles are to be located in safe areas adequately protected by temporary seeding and mulching. Hydroseeding is preferred. No temporary stockpiling of materials or equipment shall occur within critical areas or associated buffers, or the critical root zone for vegetation proposed for retention.
8. Non-compliance with the requirements for erosion controls, water quality, and clearing limits may result in revocation of project permit, plan approval, and bond foreclosures.
9. All earth work shall be performed in accordance with City Standards. Pre-construction soils investigation may be required to evaluate soils stability.
10. If cut and fill slopes exceed a maximum of two feet horizontal to one foot vertical, a rock or concrete retaining wall may be required. All rock retaining walls greater than four (4) feet in height are to be designed and certified by a professional engineer experienced in soil mechanics.
11. The Surface of all slopes shall be compacted. This may be accomplished by over-building the slopes, then cutting back to final grades; or by compacting each lift as the slope is being constructed. All slopes shall be compacted by the end of each working day.
12. Upon completion of work, final reports must be submitted to the City in conformance with the current City adopted International Building Code.

MAINTENANCE OF SILTATION BARRIERS

1. Siltation barriers shall be inspected immediately after each rainfall and at least daily during prolonged rainfall. Close attention shall be paid to the repair of damaged bales, end runs and undercutting beneath bales. Necessary repairs to barriers or replacement of bales shall be accomplished promptly. Sediment deposits should be removed after each rainfall. Sediment deposits must be removed when sediment level reaches approximately one-half the siltation barrier height. Any sediment deposits remaining in place after the straw bale barrier is no longer required shall be dressed to conform to the existing grade, prepared and seeded.

TEMPORARY GRAVEL CONSTRUCTION ENTRANCE

1. The temporary construction entrance should be cleared of all vegetation, roots, and other objectionable material. Any drainage facilities required because of washing should be constructed according to specifications in the plan. If wash racks are used, they should be installed according to manufactures specifications.
2. Gravel shall be crushed ballast rock, 8" to 12" in depth and installed to the specified dimensions at the entrance.
3. The gravel ballast rock shall be 4" to 8" in diameter and placed across the full width of the vehicular ingress and egress area. The length of entrance shall be a minimum of 100 feet.
4. If conditions on the site are such that most of the mud is not removed from vehicle tires by contact with the gravel, then the tires must be washed before vehicles enter onto a public road. Wash water must be carried away from entrance to a settling area to remove sediment. A wash rack may also be used to make washing more convenient and effective.
5. The entrance shall be maintained in a condition which will prevent tracking or flow of mud onto public rights-of-way. This may require periodic top dressing with 2" stone, as conditions demand, and repair and/or clean out any structures used to trap sediment. All materials spilled, dropped, washed or tracked from vehicles onto roadway or into storm drains must be removed immediately.

HYDROSEEDING GENERAL NOTES

1. Construction Acceptance: Will be subject to a well established ground cover that fulfills the requirements of the approved construction plans and City of Marysville Standards.
2. All disturbed areas such as retention facilities, roadway backslopes, etc., shall be seeded with a perennial ground cover grass to minimize erosion. Grass seeding will be done using an approved hydroseeder or as otherwise approved by the City of Marysville.
3. Preparation of Surface: All areas to be seeded shall be prepared in a manner consistent with BMP T5.13 Post Construction Soil Quality and Depth in Chapter 5 of Volume V of the stormwater manual.
4. Immediately following finish grading permanent vegetation shall be applied consistent with the design and maintenance standards for Temporary and Permanent Seeding in the City adopted Department of Ecology Stormwater Management Manual for Western Washington.
5. All hydroseeding firms shall have a printout of the application rate for each job readily available for inspection by the Construction Inspection Division of Community Development.
6. The City of Marysville Construction Inspection Division of Community Development shall be notified of potential hydroseeding prior toe the commencement of same to ensure compliance of these specifications.

ROADWAY NOTES

1. Monuments shall be installed at all street intersections, at angle points, and points of curvature in each street. All boundary monuments must be installed according to the Washington State subdivision laws.
2. Curb and gutter installation shall conform to City Standard Detail 3-514.
3. Sidewalks and driveways shall be installed as lots are built on. Sidewalks and driveways shall conform to City Standard Detail 3-303-001 and -002. If asphalt is damaged during replacement of curb and gutter, the repair shall conform to City Standard Detail 3-514-001.
4. The surrounding ground (5 feet beyond the base) for all power transformers, telephone/TV pedestals, and street light main disconnects shall be graded to a positive 2 percent slope from top of curb.
5. Signage and traffic control devices are safety items and shall be installed prior to issuance of any certificate of occupancy or plat approval. However, in larger developments, exact locations of stop and yield signs may need to be determined after full buildout when traffic patterns have been established. In this case, contractor shall provide indicated "City-placed" signs, signposts, and brackets to the City sign specialist (425) 328-7954 for later installation by the City. All signage shall be in accordance with the Manual on Uniform Traffic Control Devices (MUTCD).
6. Prior to any sign or striping installation or removal the Contractor shall contact the City sign specialist (425) 328-7954 to arrange for an on-site meeting to discuss placement and uniformity.
7. New or revised stop signs or yield signs shall be advance warned using the procedure outlined in the MUTCD. Advance warning signs and flags shall be maintained by installer for 30 days and then removed.

CHANNELIZATION & SIGNING

Approved permanent traffic control signs and markings within the public Right-of-Way (ROW) shall be installed by City forces. The developer shall pay for installation of all devices. The inspector shall notify the Department of Public Works (DPW) Traffic Operations when the project is ready for channelization and signing.

During project construction, the contractor shall provide and maintain all temporary construction signs, traffic control signs, delineators and temporary markings as required. All signs, traffic control signs, delineators and temporary markings shall be according to the current Manual of Uniform Traffic Control Devices (MUTCD).

Access by emergency vehicles shall be maintained at all times during construction.

After work within the traveled roadway is competed at the end of each day, the road shall be clear of debris and equipment and completely open to traffic (unless otherwise approved by the DPW of the City). Lighted barricades or barrels shall delineate all areas within the roadway affected by construction (i.e., edge of pavement, new curb edges not illuminated by street lights).

A ROW use permit is required from the DPW for any lane/road closure within the City ROW. Contact DPW at least 15 days prior to construction activity within the public ROW, City does not have jurisdiction on state routes, roadways within incorporated cities, private roads, or private property. For any activity encroaching on such property, the applicant shall obtain permission from the appropriate authority.

WET WEATHER GRADING NOTES

Grading from October 1 to March 31st is not permitted without specific approval. If permitted, soil may be exposed for not more than two (2) days, if wet weather grading has been permitted by city. From May 1 to September 30, soil shall not be exposed for more than seven (7) days. Ground cover BMPs shall be used to stabilize the soil including but not limited to PVC cover, straw or other BMPs approved by the City.

STORMWATER NOTES

1. During construction, all existing and newly installed drainage structures shall be protected from sediments.
2. All storm manholes shall conform to City Standard Detail No.4-080-009. Flow control manhole/oil water separator shall conform to City Standard Detail No. 4-040-004.
3. Manhole ring and cover shall conform to City Standard Detail 4-080-009 and 4-080-015 thru 4-080-024. The cover shall be marked with "storm" or "drain" in 2-inch raised letters. Minimum weight of the frame shall be 210 pounds. Minimum weight of the cover shall be 150 pounds.
4. Catch basins shall by Type I unless otherwise approved by the City Engineer or Designated representative. Type I Catch basins shall conform to City Standard Detail No.4-080-007 and 4-080-008 and shall be used only for depths less than 5 feet from top of the grate to the invert of the storm pipe.
5. Catch basins Type II shall conform to City Standard Detail No. 4-080-009 and shall be used for depths greater than 5 feet from top of the grate to the invert of the storm pipe.
6. Cast iron or ductile iron frame and grate shall conform to City Standard Detail No.4-080-022. Grate shall be marked with "drains to stream". Solid catch basin lids (square unless noted as round) shall conform to WSDOT Standard Plan B-30.20-02 (Olympic Foundry No. SM60, SM52, or SM44 or equal). Vaned grates shall be required on all storm structures when roadway profile is greater than 3% and shall conform to WSDOT Standard Plan B-30.30-01 (Olympic Foundry No. SM60V or equal). Grates located in the gutter flow line shall be depressed 0.1 feet below pavement level.
7. All catch basins and manholes located outside of paved areas, shall be placed in a six foot square by four inch thick concrete pad.
8. All catch basins and manholes shall have locking lids. Rolled grates are not approved for use outside of the City right-of-way or for use with Type II manholes.
9. Contractor shall be responsible for adjusting all manhole, inlet and catch basin frames and grates to grade just prior to curb installation and/or paving.
10. Trenching, bedding, and backfill for pipe shall conform to City Standard Detail No. 3-703-002 and-003.
11. Trench backfill of new utilities and stormwater drainage system features shall be compacted to 95% maximum density (modified proctor) under roadways and 90% maximum density (modified proctor) off roadways. Compaction shall be performed in accordance with Section 7-08.3(3) and 2-03.3(14)C - Method B as defined in the current edition of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction. For permeable pavement and other stormwater BMP's designed to infiltrate subgrade compaction should be "firm and unyielding" (qualitative), and 90- 92% Standard Proctor (quantitative). Do not allow heavy compaction due to heavy equipment operation. The subgrade should not be subject to truck traffic.
12. Storm pipe shall be a minimum of 10 feet away from building foundations and/or roof lines.
13. After all other utilities are installed and prior to asphalt work, all storm pipe shall pass a low pressure air test in accordance with Section 7-04.3(1) E & F of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction. Pipe runs shall be tested with (pipe loaded and compacted to finish grade. Products used to seal the inside of the pipe are not to be used to obtain the air test.
14. All temporary sedimentation and erosion control measures, and protective measures for critical areas, preserved native vegetation and significant trees shall be installed prior to initiating any construction activities.
15. Stormwater facilities with side slopes steeper than 3:1 or with a maximum water depth greater than 3 feet shall require a powder or vinyl coated chain link perimeter fence per standard plans 3-501-007 and -008. Side slope averaging shall not be allowed. All inlet and outfall pipes shall have a trash rack installed and a mortared riprap headwall. Refer to storm drainage note 21.
16. Prior to sidewalk construction: lot drainage systems, stub-outs and any behind sidewalk drains must be installed as required. Pipe shall be PVC 3034, or SDR-35. Stub-outs shall be marked with a 2" x 4" with 3 feet visible above grade and marked "storm". Locations of these installations shall be shown on the record drawing construction plans submitted to the City.
17. Storm water retention/detention facilities, storm drainage pipe and catch basins shall be flushed and cleaned by the developer prior to; City of Marysville final acceptance of the project and; upon commencement and completion of the 2-year warranty period for the storm drainage system.
18. Unless otherwise noted, all storm sewer pipe shall be; (CP) non-reinforced concrete, ASTM C-14; (RCP) reinforced concrete for concrete pipe diameters 24" or greater, ASTM C-76; or (CMP) corrugated metal. CMP to be; galvanized steel with Treatment I asphalt coating or better; or corrugated aluminum; or AASHTO M274-70 aluminized steel. All pipes shall be installed with rubber gaskets as per manufacturers recommendations.

    Coverage Requirements for 12" diameter pipe:
    Backfill over pipe less than 12" requires RCP Class IV.
    Backfill over pipe less than 24" requires RCP minimum.
    Backfill over pipe greater than 24" requires 16 gage CMP minimum.
19. Corrugated Polyethylene Pipe (CPP):
    A. All pipe shall be smooth interior. CPP shall be double-walled. All pipe shall meet AASHTO and ASTM specifications.
    B. Upon request by the City inspector, all pipe runs shall pass the low pressure air test requirements of Section 7-04.3(1) E & F of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction. Pipe runs shall be tested with pipe loaded and compacted to finish grade.
    C. Upon request by the City inspector, pipe shall be subject to mandrel testing (mandrel size = 90% of nominal pipe diameter).
    D. Pipe shall be stored on site in shipping bunks on a flat level surface. This requirement will be strictly enforced; failure to comply may result in rejection of the pipe and/or future restriction on use of material.
    E. Minimum depth of cover shall be 2 feet.
    F. Couplings shall be integral bell and spigot or double bell separate couplings. Split couplings will not be allowed.
    G. Backfill shall comply with Section 7-08.3(3) of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction modified as follows:

    The second paragraph of Section 7-08.3(3) is deleted and replaced with the following:

    The material used for backfilling around and to a point 1 foot above the top of the pipe shall be clean earth or sand, free from clay. Any gravel or stones included in the backfill shall pass through a 1 inch sieve.
20. All non-perforated metal pipe shall have neoprene gaskets at the joints. O-ring gaskets may be used for type-F coupling band.
21. Culvert ends shall be beveled to match side slopes. Field cutting of culvert ends is permitted when approved by the City engineer or designated representative.
22. All field cut culvert pipe shall be treated as required in the Standard Specifications or General Special Provisions.
23. All pipe shall be placed on stable earth. If in the opinion of the City inspector, the existing trench foundation is unsatisfactory, then it shall be excavated below grade and backfilled with gravel bedding to support the pipe.
24. All landscaped and lawn areas, except areas within the dripline of preserved trees, shall be amended per BMP T5.13 Post Construction Soil Quality and Depth in Chapter 5, Volume V of the Stormwater Manual.

INFILTRATION FACILITY NOTES

1. Infiltration facility installations shall be directed/overseen by a licensed geotechnical engineer if directed by the City Engineer or designee. The geotechnical engineer shall certify that the Bioretention Soil Media soil type and condition (native or fill soil) meets the deign specification prior to final inspection.
2. The geotechnical engineer will prescribe corrective action for soil that does not meet the design specification, soil that has been over compacted or for soil that has been contaminated by turbidity. Final engineering approval is required from the City.
3. Performance testing and verification for a facility shall be conducted before final construction approval by the City, or prior to construction of other project improvements or recording of a subdivision as required by MMC 14.15.120. The contractor shall be responsible for making corrections to ensure the stormwater system functions as designed.

STAND PIPE AND SEDIMENT POND MAINTENANCE

1. The embankment of the basin should be checked regularly to ensure that it is structurally sound and has not been damaged by erosion or construction equipment. The emergency spillway should be checked regularly to insure that the lining is well established and erosion resistant. The siltation basin should be checked for sediment clearout after each rainfall which produces runoff. When the sediment reaches the cleanout level, it shall be removed and properly disposed.

BIOFILTER SWALE PLANTING NOTES

Final engineering approval is contingent on swale inspection by the City of Marysville Construction Inspection Division of Community Development.

Inspection must be requested by calling the City of Marysville Construction Inspection Division of Community Development at 360.363.8100 at least 24 hours prior to inspection date.

Erosion control seed mix or shingle-weave sod, as determined by the City Engineer or designated representative, shall be placed above the design water surface for the 6-month, 24-hour storm event. A minimum topsoil depth of 4" shall be placed within the swale. The topsoil surface shall be at design grade for the swale. An erosion control blanket shall cover the topsoil to prevent erosion of topsoil and seed mix until a well defined ground cover is established. The wetted surface area as defined by the 6-month, 24-hour storm event shall be planted with wet tolerant plant species.

Recommended Seed Mix for Bioswales:

	% Weight	% Purity	% Germination
Tall or meadow fescue *Festuca arundinacea or festuca elatior*	75-80	98	90
Seaside/Creeping bentgrass *agrostis palustris*	10-15	92	85
Redtop bentgrass *agrostis alba or Agrostis gigantea*	5-10	90	80

CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. CONFORMANCE OF THIS DESIGN WITH ALL APPLICABLE LAWS AND REGULATIONS IS THE FULL AND COMPLETE RESPONSIBILITY OF THE LICENSED DESIGN ENGINEER. WHOSE STAMP AND SIGNATURE APPEAR ON THIS SHEET. ACKNOWLEDGMENT OF CONSTRUCTION DRAWING REVIEW DOES NOT IMPLY CITY APPROVAL FOR CONSTRUCTION ACTIVITIES THAT REQUIRED OTHER COUNTY, STATE OR FEDERAL PERMIT REVIEW AND APPROVAL. THE PROPERTY OWNER AND LICENSED DESIGN ENGINEER SHALL BE RESPONSIBLE FOR THE ACQUISITION AND COMPLIANCE OF ALL APPLICABLE PERMITS OR AUTHORIZATIONS WHICH MAY INCLUDE BUT ARE NOT LIMITED TO: WSDFW HYDRAULIC PROJECT APPROVAL (HPA), WSDOE NOTICE OF INTENT (NOI). ANY CORPS OF ENGINEERS FILL PERMITS AND THE REQUIREMENTS OF THE ENDANGERED SPECIES ACT. THIS ____ DAY OF _____, 202_.

Hydrologic Soil Group: B
Compact Fill Area to 95% Modified Proctor

CONSTRUCTION SWPPP

The 13 elements that are part of a Construction SWPPP are as follows:

1. Mark Clearing Limits: Prior to clearing or disturbing the limits must be marked. This element is part of most normal construction plans as one of the first steps.
2. Establish Construction Access: All erosion control plans shall install a stabilized construction entrance (or other method of preventing sediment transport onto the roads). If a standard gravel construction entrance is proposed, use geo-textile fabric under the rock. Note: a wheel wash is required for plans that propose winter grading.
3. Detain Flows: Based on a downstream analysis it may be necessary to detain runoff from a site under construction. It may be necessary to construct and use a detention pond to control flows during construction.
4. Install Sediment Controls: If there is runoff from the construction site, sediment shall be removed from the water. Note that the water quality standards must be met.
5. Stabilize Soils: All exposed and non-worked soil shall be stabilized by use of BMP's. Note there are time periods of allowed exposure that depend on the season. Groundcover both temporary and permanent need to be part of the construction plans.
6. Protect Slopes: Cut and fill slopes need to be protected from erosive flows and concentrated flows until permanent cover and drainage conveyance systems are in place.
7. Protect Drain Inlets: All storm drain inlets require protection from sediment and silt laden water.
8. Stabilize Channels and Outlets: Temporary and permanent conveyance systems shall be stabilized to prevent erosion during and after construction. Culvert outlets require protection.
9. Control Pollutants: The plan shall show how all pollutants, including waste materials and demolition debris, will be handled. This includes maintenance of construction equipment, fertilizers, application of chemicals, and water treatment systems.
10. Control De-Watering: The water from de-watering systems for trenches, vaults and foundations shall be discharged into a controlled system.
11. Maintain BMPs: The plan shall provide for inspection and maintenance of the planned and installed construction BMPs as well as their removal at the end of the project.
12. Manage the Project: The plan shall outline how the site shall be managed for erosion control and identify the management team. It needs to cover phasing, training, pre-construction conference, coordination with utilities and contractors, monitoring and reporting. It shall provide for notice of problems, revisions during construction and contingency planning. One of the most important elements in the management of the project is planning for contingencies based on the risk of exposure during phases of the development. It is essential that planning is ongoing throughout the life of the project.
13. Protect on-Site stormwater management BMPs for runoff from roofs and other hard surfaces. On-site Stormwater Management BMPs shall be protected at all times during the construction process. This may mean that stormwater management BMPs will be installed towards the end of the construction process to avoid siltation and compaction.

LAST REVISED 07/14/06
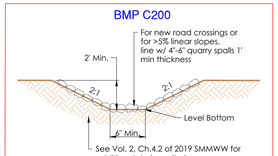
STANDARD PLAN 4-040-007

SITE ASSESSMENT
Disturbance Area =265,460 sf
Protection Level =High
Reason =Sheet flow discharge post retention
Surface Area Equation: **A = F*(Q2s/Vs)**
where: **F** = 2.0 *(safety Factor)*
Q2 = 1.12 *cfs (10-yr peak flow)*
Vs = 0.00096 *fps (particle setting rate)*
A = 2,333 *sf (min top surface Area)*

RECOMMENDED DIMENSIONS:

Min Storage Depth	3 ft
Min Side Slopes, L & R	3:1
Min Side Slopes, F & B	3:1
Bottom Length	100 ft
Bottom Width	20 ft
Area at Top surface	2,333 sf

NOTE: A maximum of 3-acres Disturbed Area may be routed to each Sediment Trap. Multiple Sediment Traps are Required.



NOTE:
Trap may be formed by berm or by partial or complete excavation.

NOTE:
Detail per Early Grading G19-0059. Maintain all BMPs.

STORMWATER MANAGEMENT CELL D PLAN AND PROFILES

SHEET C33 of C42

24x36

-

BIORETENTION SOIL MEDIA PROCEDURE NOTE:

Two acceptable criteria for Bioretention Soil Media (BSM or CAS):

- Default Bioretention Soil Media
- Custom Bioretention Soil Mix.

Default Bioretention Soil Media

Projects which use the following requirements for the bioretention soil media do not have to test the media for its saturated hydraulic conductivity

Mineral Aggregate

Percent Fines: A range of 2 to 4 percent passing the #200 sieve is ideal and fines should not be above 5 percent for a proper functioning specification according to ASTM D422.

Aggregate Gradation

The aggregate portion of the BSM should be well-graded. According to ASTM D 2487-98 (Classification of Soils for Engineering Purposes (Unified Soil Classification System)), well-graded sand should have the following gradation coefficients:

- Coefficient of Uniformity (Cu = D60/D10) equal to or greater than 4, and
- Coefficient of Curve (Cc = (D30)2/D60 x D10) greater than or equal to 1 and less than or equal to 3.

The sand gradation below is often supplied as a well-graded utility or screened. With compost this blend provides enough fines for adequate water retention, hydraulic conductivity within recommended range (see below), pollutant removal capability, and plant growth characteristics for meeting design guidelines and objectives. Where existing soils meet the aggregate gradation below, those soils may be amended rather than importing mineral aggregate.

General Guideline for Mineral Aggregate Gradation	
Sieve Size	Percent Passing
3/8"	100
#4	95-100
#10	75-90
#40	25-40
#100	4-10
#200	2-5

Compost to Aggregate Ratio, Organic Matter Content, Cation Exchange Capacity

- Compost to aggregate ratio: 60-65 percent mineral aggregate, 35 - 40 percent compost.
- Organic matter content: 5 - 8 percent by weight.
- Cation Exchange Capacity (CEC) must be > 5 milliequivalents/100 g dry soil Note: Soil mixes meeting the above specifications do not have to be tested for CEC. They will readily meet the minimum CEC.

Compost

To ensure that the BSM will support healthy plant growth and root development, contribute to biofiltration of pollutants, and not restrict infiltration when used in the proportions cited herein, the following compost standards are required.

- Meets the definition of "composted materials" in WAC 173-350-220 (including contaminant levels and other standards), available online at http://www.ecy.wa.gov/programs/swfa/organics/soil.html
- Produced at a composting facility permitted by the WA Department of Ecology. A current list of permitted facilities is available at http://www.ecy.wa.gov/programs/swfa/compost/
- The compost product must originate a minimum of 65 percent by volume from recycled plant waste as defined in WAC 173-350-100 as "Type I Feedstocks." A maximum of 35 percent by volume of other approved organic waste as defined in WAC 173-350-100 as "Type II", including postconsumer food waste, but not including biosolids, may be substituted for recycled plant waste. Type II and IV feedstocks shall not be used for the compost going into bioretention facilities or rain gardens.
- Stable (low oxygen use and CO2 generation) and mature (capable of supporting plant growth) by tests shown below. This is critical to plant success in a bioretention soil mixes.
- Moisture content range: no visible free water or dust produced when handling the material.
- Tested in accordance with the U.S. Composting Council "Testing Methods for the Examination of Compost and Composting" (TMECC), as established in the Composting Council's "Seal of Testing Assurance" (STA) program. Most Washington compost facilities now use these tests.
- Screened to the size gradations for Fine Compost under TMECC test method 02.02-B (gradations are shown in the specification in an appendix of the ***Low Impact Development Technical Guidance Manual for Puget Sound***)
- pH between 6.0 and 8.5 (TMECC 04.11-A). If the pH falls outside of the acceptable range, it may be modified with lime to increase the pH or iron sulfate plus sulfur to lower the pH. The lime or iron sulfate must be mixed uniformly into the soil prior to use in the bioretention area.
- Manufactured inert content less that 1% by weight (TMECC 03.08-A)
- Minimum organic matter content of 40% (TMECC 05.07-A)
- Soluble salt content less than 4.0 mmhos/cm (TMECC 04.10-A)
- Maturity greater than 80% (TMECC 05.05-A "Germination and Vigor")
- Stability of 7 or below (TMECC 05.08-B "Carbon Dioxide Evolution Rate")
- Carbon to nitrogen ratio (TMECC 04.01 "Total Carbon" and 04.02D "Total Kjeldahl Nitrogen") of less than 25:1. The C:N ratio may be up to 35:1 for plantings composed entirely of Puget Sound Lowland native species and up to 40:1 for coarse compost to be used as a surface mulch (not in a soil mix).

11 BIORETENTION SOIL MEDIA
SCALE: NTS

Design Criteria for Custom Bioretention Soil Mixes

Projects which prefer to create a custom Bioretention Soil Mix rather than using the default requirements above must demonstrate compliance with the following criteria using the specified test method:

- CEC ≥ 5 meq/100 grams of dry soil; USEPA 9081
- pH between 5.5 and 7.0
- 5 - 8 percent organic matter content before and after the saturated hydraulic conductivity test; ASTM D2974[Standard Test Method for Moisture, Ash, and Organic Matter of Peat and Other Organic Soils)
- 2-5 percent fines passing the 200 sieve; TMECC 04.11-A
- Measured (Initial) saturated hydraulic conductivity of less than 12 inches per hour; ASTM D 2434 (Standard Test Method for Permeability of Granular Soils (Constant Head)) at 85% compaction per ASTM D 1557 (Standard Test Method s for Laboratory Compaction Characteristics of Soil Using Modified Effort). Also, use Appendix V-B, Recommended Procedures for ASTM D 2434 When Measuring Hydraulic Conductivity for Bioretention Soil Mixes.
- Design (long-term) saturated hydraulic conductivity of more than 1 inch per hour. Note: Design saturated hydraulic conductivity is determined by applying the appropriate infiltration correction factors as explained above under "Determining Bioretention soil mix infiltration rate."
- If compost is used in creating the custom mix, it must meet all of the specifications listed below for compost.

Infiltration rates for the initial placement of Bioretention Soil Media is to be within 6 to 12 inches per hour to ensure vegetation survival.

Design Criteria:

Soil Retention: The duff layer and native topsoil should be retained in an undisturbed state to the maximum extent practicable. In any areas requiring grading remove and stockpile the duff layer and topsoil on site in a designated, controlled area, not adjacent to public resources and critical areas, to be reapplied to other portions of the site where feasible.

Soil quality: The resulting soil should be conducive to the type of vegetation to be established. All areas subject to clearing and grading that have not been covered by impervious surface, incorporated into a drainage facility or engineered as structural fill or slope shall, at project completion, demonstrate the following:

- A topsoil layer with a minimum organic matter content of ten percent dry weight in planting beds, and 5% organic matter content (based on a loss-on-ignition test) in turf areas, and a pH from 6.0 to 8.0 or matching the pH of the original undisturbed soil. The topsoil layer shall have a minimum depth of eight inches except where tree roots limit the depth of incorporation of amendments needed to meet the criteria. Subsoils below the topsoil layer should be scarified at least 4 inches with some incorporation of the upper material to avoid stratified layers, where feasible.
- Planting beds must be mulched with 2 inches of organic material.
- Quality of compost and other materials used to meet the organic content requirements:
  1. The organic content for "pre-approved" amendment rates can be met only using compost meeting the compost specification for Bioretention (BMP T7.30), with the exception that the compost may have up to 35% biosolids or manure.
  2. Compost used in bioretention areas should be stable, mature and derived from yard debris, wood waste, or other organic materials that meet the intent of the organic soil amendment specification. Biosolids and manure composts can be higher in bioavailable phosphorus than compost derived from yard or plant waste and therefore are not allowed in bioretention areas due to the possibility of exporting bio-available phosphorus in effluent.
  3. The compost must also have an organic matter content of 35% to 65%, and a carbon to nitrogen ratio below 25:1.
  4. The carbon to nitrogen ratio may be as high as 35:1 for plantings composed entirely of plants native to the Puget Sound Lowlands region.
- Calculated amendment rates may be met through use of composted material meeting the requirements above; or other organic materials amended to meet the carbon to nitrogen ratio requirements, and not exceeding the contaminant limits identified in Table 220-B, Testing Parameters, in WAC 173-350-220.

Implementation Options:

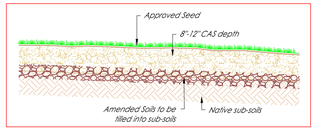
Option 1: Leave native soil undisturbed, and protect from compaction during construction.

Option 1 is only applicable to sites that have the original, undisturbed soil native to the site. This will most often be forested land that is being left undisturbed in the current project.

Option 2: Amend disturbed soil according to the following procedures:

a. Scarify subsoil to a depth of one foot.
b. In planting beds, place three inches of compost and till in to an eight-inch depth.
c. In turf areas, place two inches of compost and till in to an eight-inch depth.
d. Apply two to four inches of arborist wood chip, coarse bark mulch, or compost mulch to planting beds after final planting.

(Alternatively, disturbed soil can be amended on a site-customized manner so that it meets the soil quality criteria set forth above, as determined by a licensed engineer, geologist, landscape architect, or other person as approved by Snohomish County).



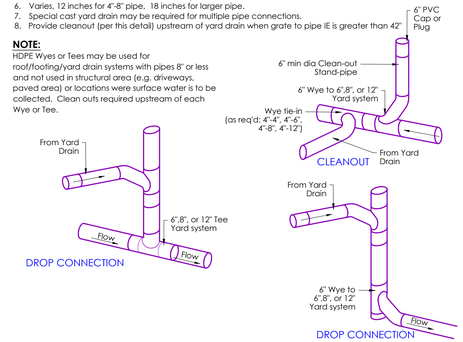
Option 3: Disturbed Soil.

Stockpile existing topsoil during grading and replace it prior to planting. Stockpiled topsoil must be amended if needed to meet the organic matter and depth requirements by following the procedures in option (4). Remove forest duff layer and topsoil and stockpile separately, in an approved location prior to grading. Cover soil and duff piles with woven weed barrier (available from nursery supply stores) that sheds moisture yet allows airflow.

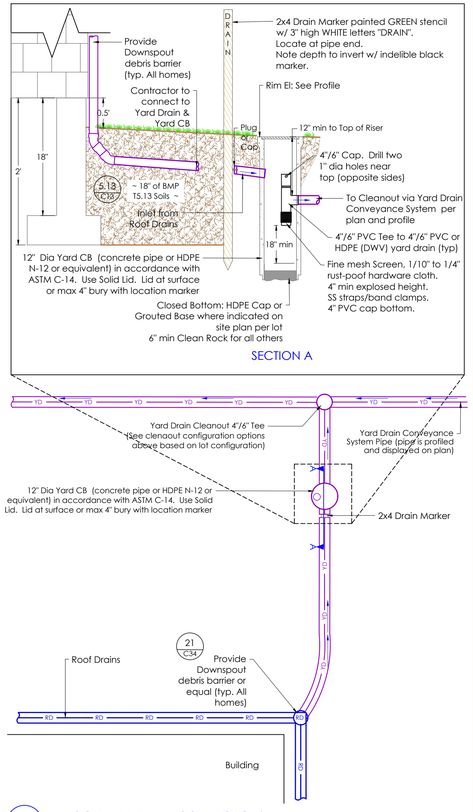
Option 4: Import topsoil mix with 10% min soil organic matter content.

Import topsoil mix of sufficient organic content and depth to meet the organic matter and depth requirements.

NOTE: All yards, landscape areas, or disturbed areas to receive 18 inches of Compost Amended Soils meeting the criteria of BMP T5.13. Careful removal of 9 inches of the onsite Forest Duff** could meet this requirement if properly protected and cared for during the Construction Process.
**Ignition testing of organics shall confirm that forest duff meets BMP T5.13 Specifications by an independent soils lab.
Note: Grading with Heavy Equipment may render this layer unsuitable.



513 COMPOST AMENDED SOILS
SCALE: NTS



NOTES:

1. Yard drains to be constructed from High Density Polyehtylene (HDPE) in accordance with ASTM C-14 otherwise shown on the plans or noted in the specifications.
2. Cutout hole size is equal to outlet pipe outside diameter plus yard drain wall thickness.
3. Connection to outlet pipe to be mortared and made flush with inside of the yard drain wall.
4. Cast iron bell grate. Fits into bell recess and extends flush with face of bell. The grate shall have slots (holes) that constitute 50 percent open area for drainage unless otherwise specified on the plans or noted in the specifications. Inlet bell area shall be finished to assure non-rocking fit with any cover position.
5. Washed drain rock. 6 inches minimum depth.
6. Varies, 12 inches for 4"-8" pipe. 18 inches for larger pipe.
7. Special cast yard drain may be required for multiple pipe connections.
8. Provide cleanout (per this detail) upstream of yard drain when grate to pipe IE is greater than 42"

NOTE:

HDPE Wyes or Tees may be used for roof/footing/yard drain systems with pipes 8" or less and not used in structural area (e.g. driveways, paved area) or locations were surface water is to be collected. Clean outs required upstream of each Wye or Tee.

90 BIORETENTION CELL MATERIALS SPECIFICATION - TYPICAL SECTION
SCALE: NTS

Features
Integrated flow directional gutter outlet which directs the flow of water from the gutters onto an adjustable elliptical primary screen.

How it works
The steep angle of primary screen enables the action of the water to wash the screen and minimize maintenance. A secondary stainless steel screen keeps mosquitoes and vermin out of downpipes. With the removal of the secondary screen, the Leaf Beater is ideal for use purely as a debris removing device even when rainwater is not being collected.

Four settings can be applied to vary the angle at which the elliptical primary screen faces to adjust for various intensities of rainfall and amounts of debris. After observing the performance of the Leaf Beater®, the screen can be adjusted until the best operating setting is achieved.

Installation
The Leaf Beater® is usually mounted directly under the roof gutter, however it can be mid-mounted on a wall to make it easier to access for cleaning.
The Leaf Beater® range includes three variants and connects with PVC and metal downpipes:
1. For rectangular downpipes – 2" x 3
2. For round downpipes – 3" and 4" round.

SEWER AND WATER OVERVIEW PLAN

GENERAL NOTES FOR WATER

1. All workmanship and material shall be in accordance with City of Marysville standards and the most current copy of the State of Washington/APWA Standard Specifications for Road, Bridge, and Municipal Construction. All water system improvements shall be constructed in accordance with these approved plans. Any deviation from the plans will require prior approval from the Owner, the City Engineer, and other approved public agencies.
2. A preconstruction meeting shall be held with the City prior to the start of construction.
3. It shall be the responsibility of the Contractor to locate or have located by the appropriate companies all utilities prior to beginning construction. Call Underground Locate at 1-800-424-5555 a minimum of 48 hours prior to any excavations.
4. Water pipe shall be ductile iron pipe standard thickness Class 52 cement-lined unless otherwise specified and shall conform to ANSI/AWWA C151/A21.51.
5. Gate valves shall be resilient wedge, NRS (Non Rising Stem) with O-rings seals. Valve ends shall be mechanical joint or ANSI flanges. Valves shall conform to AWWA S09-80. Valves shall be Mueller, M & H, Clow R/W or Waterous Series 500.
6. Fittings shall be ductile iron short body compact conforming to AWWA C110, C11 and C153 and shall be cement-mortar lined conforming to AWWA C104. The City will be given 72 hours notice prior to scheduling a shutdown. Where connections require "field verification", connection points will be exposed by Contractor and fittings verified 48 hours prior to distributing shut-down notices.;
7. Fire hydrants shall conform to AWWA C501 and shall be of standard manufacture and of a pattern approved by Marysville, with Storz 5" quarter turn fitting. Hydrants shall be M & H Reliant Style 929 or Mueller A-423 (MJ). Hydrants shall be bagged until system is approved.
8. All lines shall be disinfected, flushed, and pressure tested in conformance with WSDOT/APWA standards and specifications. All pipe shall be tested at 240 psi. The Contractor shall furnish all temporary plugs, testing devices, etc. The City shall be present for all testing. The City will take purity tests, and connection will be authorized following passing of the tests. The Contractor shall not operate any valve or part of the City water system without notification and specific supervision of the City utility superintendent. The Contractor shall make all connections to the system required after making arrangements with the City in advance. Work and procedures shall conform to APWA Sec. 7-11.3(9).
9. Installation of pipe, fittings and valves, hydrants, and appurtenances shall conform to WSDOT/APWA standard specifications. Cover shall be 42 inches over the top of pipe unless otherwise noted on plans. In the event grade revision following water main construction results in cover over the water main of less than 3 feet or in excess of 5 feet, the water main shall be reconstructed by the Owner to conform to the specifications of the City of Marysville unless depth has been pre-approved by the City. All added costs of inspecting such water main reconstruction shall be charged to the developer.
10. Prior to construction of any water mains, the lot corners shall be staked and water main locations established by survey, cost of which is to be borne by the developer.
11. To maintain the required alignment, use short lengths and deflect the joints or use necessary bends.
12. Bedding material meeting the requirements for rigid pipe shall be placed to a depth of 6" under and around the pipe and to a depth of at least 12 inches over the top of the pipe. The bedding materials hall be rammed and tamped around the pipe by the use of shovels or other approved hand-held tools so as to provide firm and uniform support over the full length of all pipe, valves, and fittings. Care shall be taken to prevent any damage to the pipe or its protective coating.
13. Separation of water and sewer mains shall conform to W.D.O.E. standards or special construction requirements.
14. Services, blow-offs, and miscellaneous details shall be shown on the drawings or standard plans.

ADDITIONAL NOTES
1. Hydrants shall be painted all yellow, without painted green tops in accordance with Design and Construction Standard 2-060 part C;
2. All water main placed in fill soils shall be restrained joint;

GENERAL NOTES FOR SANITARY SEWER

1. All workmanship and materials shall be in accordance with City of Marysville standards and the most recent copy of the State of Washington Standard Specifications for Road, Bridge, and Municipal Construction (WSDOT/APWA).
2. City of Marysville datum (NGVD, 1960 supplemental adjustment) shall be used for all vertical control. A list of benchmarks is available at the Public Works Department.
3. All approvals and permits required by the City of Marysville shall be obtained by the Contractor prior to the start of construction. All sanitary improvements shall be constructed in accordance with these approved plans. Any deviation from these plans shall require prior approval from the Owner, the City Engineer, and other appropriate public agencies.
4. If construction is to take place in the County right-of-way, the Contractor shall contact the City Public Works Department to obtain all the required approvals and permits.
5. A preconstruction meeting shall be held with the City of Marysville Department of Public Works prior to the start of construction.
6. The City of Marysville Department of Public Works shall be notified a minimum of 48 hours in advance of a tap or connection to an existing sanitary sewer main. The inspector shall be present at the time of the tap or connection.
7. The Contractor shall be fully responsible for the location and protection of all existing utilities. The Contractor shall verify all utility locations prior to construction by calling the Underground Locate Line at 1-800-424-5555 a minimum of 48 hours prior to any excavation.
8. Gravity sewer main shall be PVC, ASTM D 3034 SDR 35 or ASTM F 789 with joints and rubber gaskets conforming to ASTM D 3212 and ASTM F 477.
9. Precast manholes shall meet the requirements of ASTM C 478. Manholes shall be Type 1-48" manhole unless otherwise specified on the plans. Joints shall be rubber gasketed conforming to ASTM C 443 and shall be grouted from the inside. Lift holes shall be grouted from the outside and inside of the manhole.
10. Side sewer services shall be PVC, ASTM D 3034 SDR 35 with flexible gasketed joints. Side sewer connections shall be made by a tap to an existing main or a tee from a new main connected above the spring line of the pipe. The contractor shall provide the City with accurate As-Built Drawings of all side sewer locations.
11. All sewer mains shall be field staked for grades and alignment prior to construction by a licensed engineer or surveying firm qualified to perform such work. Prior to constructing any sewer, the lot corners shall be staked and sewer line location established by survey, cost of which shall be borne by the Developer.
12. All plastic pipe and services shall be installed with continuous tracer tape installed 12" to 18" under the proposed finished sub grade. The marker shall be plastic non-biodegradable, metal core or backing marked sewer which can be detected by a standard metal detector.
13. Each side sewer lateral shall have a 2" x 4" wood "marker" at the termination of the stub. The "marker" shall extend from the trench to above finished grade. Above the ground surface, it shall be painted "green" with "S/S" and the depth, in feet, stenciled in black letters 2" high.
14. Side sewers shall be installed by the Developer and coordinated for clearance with power, telephone, and other utilities. All side sewers to be installed 10 feet into lot served and staked and marked as shown on these plans.
15. Pipe bedding shall be in accordance with WSDOT Standard Plan B-18c Class F. Pea gravel is an acceptable bedding material. All pipe shall be laid on a properly prepared foundation according to Standard Specification 7-02.3(1). This shall include necessary leveling of the trench bottom or the top of the foundation materials as well as placement and compaction of required bedding material to uniform grade so that the entire length of the pipe will be supported on a uniformly dense unyielding base.
16. A 3-foot square x 4-inch thick asphalt or concrete pad shall be installed around all cleanouts that are not in a pavement area.
17. Temporary street patching shall be allowed for as approved by the City Engineer. Temporary street patching shall be provided by placement and compaction of 1-inch maximum asphalt concrete cold mix. Contractor shall be responsible for maintenance as required.
18. Erosion control measure shall be taken by the Contractor during construction to prevent infiltration and inflow into existing and proposed sanitary sewer facilities.
19. Provide traffic control plan(s) in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) as required.
20. It shall be the responsibility of the Contractor to have a copy of these approved plans on construction site at all times.
21. Any changes to the design shall first be reviewed and approved by the project engineer and the City of Marysville.
22. All lines shall be cleaned and pressure tested prior to paving in conformance with the above referenced specifications. (See note 1.) Testing of the sanitary sewer main shall include TV inspection of the main by the Contractor. Immediately prior to TV inspection enough water shall be run down the line so it comes out the lower manhole. A copy of the video tape shall be submitted to the City of Marysville. Acceptance of the line will be made after the tape has been reviewed and approved by Public Works. A water test of all manholes in accordance with Marysville standard may also be required. Testing shall take place after all underground utilities are installed and compaction of the roadway sub grade is completed.
23. Prior to backfill all mains and appurtenances shall be inspected and approved by the City of Marysville Department of Public Works. Approval shall not relieve the Contractor for correction of any deficiencies and/or failures as determined by subsequent testing and inspections. It shall be the Contractor's responsibility to notify the City of Marysville for the required inspections.

CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. CONFORMANCE OF THIS DESIGN WITH ALL APPLICABLE LAWS AND REGULATIONS IS THE FULL AND COMPLETE RESPONSIBILITY OF THE LICENSED DESIGN ENGINEER. WHOSE STAMP AND SIGNATURE APPEAR ON THIS SHEET. ACKNOWLEDGMENT OF CONSTRUCTION DRAWING REVIEW DOES NOT IMPLY CITY APPROVAL FOR CONSTRUCTION ACTIVITIES THAT REQUIRED OTHER COUNTY, STATE OR FEDERAL PERMIT REVIEW AND APPROVAL. THE PROPERTY OWNER AND LICENSED DESIGN ENGINEER SHALL BE RESPONSIBLE FOR THE ACQUISITION AND COMPLIANCE OF ALL APPLICABLE PERMITS OR AUTHORIZATIONS WHICH MAY INCLUDE BUT ARE NOT LIMITED TO: WSDFW HYDRAULIC PROJECT APPROVAL (HPA), WSDOE NOTICE OF INTENT (NOI), ANY CORPS OF ENGINEERS FILL PERMITS AND THE REQUIREMENTS OF THE ENDANGERED SPECIES ACT. THIS ____ DAY OF _____, 202_.

JOSH KING, P.E., DEVELOPMENT SERVICES MANAGER

THESE APPROVED CONSTRUCTION PLANS EXPIRE AFTER PERIOD OF 60 MONTHS FROM THE DATE SHOWN ABOVE OR UPON EXPIRATION OF PRELIMINARY PLAT OR SITE PLAN APPROVAL, PER MMC 22A.040.020 & 22A.040.030.

GENERAL NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities. The contractor shall verify the location of all existing utilities prior to any construction. Agencies shall be notified within a reasonable time prior to the start of construction.

PA 24-008

Dear Merle,

The Community Development Department has reviewed the above referenced application and determined the application complete on April 4, 2024. Any additional information/items that are needed will be requested after all affected departments, local, state and federal agencies have had an opportunity to review the proposal.

If you have any questions regarding this application, please contact me at ahess@marysvillewa.gov, or by phone at 360-363-8215.

Sincerely,

Amy Hess

NOTICE IS HEREBY GIVEN THAT AN APPLICATION WAS MADE FOR THE FOLLOWING PROPOSAL:

Applicant has requested Planned Residential Development (PRD) and Binding Site Plan Approval with State Environmental Policy Act (SEPA) review in order to construct a 182-lot Planned Residential Development on approximately 29.48 acres, utilizing residential density incentives consistent with MMC 22G.090. The project contains one (1) Category III wetland and buffer from an off-site wetland extends on-site. Project will construct associated improvements, include clearing, grading, and utility and roadway extensions. The project proposes a concurrent rezone to align the split zoning of the underlying parcels with the project proposal.

Existing Environmental Documents: SEPA Checklist, Critical Areas Report, Traffic Impact Analysis, Geotechnical Report, Drainage Report, and Stormwater Pollution Prevention Plan

Public Hearing: N/A Administrative Decision

Public Comment Period: Written comments must be submitted to the contact person listed below by **4:30 PM on April 25, 2024**.

Document Availability: Application Materials

ANY PERSON HAS THE RIGHT TO RECEIVE NOTICE, PARTICIPATE IN ANY HEARINGS, REQUEST A COPY OF THE FINAL DECISION AND APPEAL THE DECISION AS PROVIDED BY LAW.

Project Title	Lakewood Heights	**Related File Number**(s)	PA22-007, PreA21-050		
Project Description	Application for a Planned Residential Development (PRD) and Binding Site Plan (BSP) with State Environmental Policy Act (SEPA) Review. The applicant is seeking approval to construct a 182-lot PRD on 29.48 acres, utilizing MMC Chapter 22C.090 Residential Density Incentives, to increase the base density from 6.5 to 8 units/acre. The project site contains a Category III wetland. The buffer from an off-site wetland to the north east extends on to the project property. The project proposes a concurrent rezone to align the spilt zoning of the underlying parcels with the project proposal.

Traffic Mitigation Offer to Snohomish County

The applicant completes part one and submits it to the City with a completed county traffic worksheet. The City completes part two and sends it to the County. The County completes part three and sends it back to the City.

Part One to be completed by Applicant

Basic Development Information

Name of City in which development is located Marysville

Name of Proposed Development Gemmer Residential

City Project File Number (if known)

Name of Applicant MJS Investors

Address of Applicant 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

Proportionate Share Calculation: *Choose Option A or B*

☒ Option A: Based on a percentage of the County's adopted impact fee (attach traffic worksheet.)

1. The applicable percentage of the County's fee: 20 %
2. Net New Average Daily Traffic: 1,762 ADT
3. The adopted County impact fee for this development: 185 $/ADT
4. Total Proportionate Share Amount: $ 65,194

☐ Option B: Based on a comprehensive traffic study (attach traffic worksheet and traffic study)

_____ No road improvements are impacted. Hence, proportionate share amount is zero ($0).

_____ The following road improvements are impacted. The calculation of proportionate shares is summarized below.

List by Names/Description the Impacted County Projects (attach other pages if necessary)	County Project ID#	PHTs Impacting Project	Capacity Cost per PHT	Proportionate Share Obligation per Impacted Project
1.				
2.				
3.				
4. Total Proportionate Share Amount (sum of obligations for each impacted project)				$

☒ **Trip Distribution and Assignment if required**

If required, attach AM and PM peak-hour trip distribution and assignment. Attach traffic worksheet showing whether or not it is required and traffic study.

☒ **Mitigation of other impacts if required for developments generating more than 50 Peak-Hour Trips**

Mitigation of Impacts on Level of Service

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

Mitigation of Impacts on Inadequate Road Conditions

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

Mitigation for Impacts on Access or Circulation

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

☒ **Written Offer**

The Applicant hereby voluntarily agrees to pay the total proportionate share amount shown above for impacts of the proposed development on the capacity of Snohomish County roads and provide mitigation of all other impacts as indicated above and described in attached documents.

BY: _____ Date: 11/15/23

Signature by Authorized Official of Applicant or Authorized Representative

Print Name and Title Rob Risinger

Instructions to Applicant. Submit this Offer, a completed county traffic worksheet, and any other attachments to the City with your initial application or send directly to Contact.pwCMS@snoco.org.

Traffic Mitigation Offer to Snohomish County

The applicant completes part one and submits it to the City with a completed county traffic worksheet. The City completes part two and sends it to the County. The County completes part three and sends it back to the City.

Part One to be completed by Applicant

Basic Development Information

Name of City in which development is located Marysville

Name of Proposed Development Gemmer Residential

City Project File Number (if known)

Name of Applicant MJS Investors

Address of Applicant 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

Proportionate Share Calculation: *Choose Option A or B*

☒ Option A: Based on a percentage of the County's adopted impact fee (attach traffic worksheet.)

1. The applicable percentage of the County's fee: 20 %
2. Net New Average Daily Traffic: 1,762 ADT
3. The adopted County impact fee for this development: 185 $/ADT
4. Total Proportionate Share Amount: $ 65,194

☐ Option B: Based on a comprehensive traffic study (attach traffic worksheet and traffic study)

_____ No road improvements are impacted. Hence, proportionate share amount is zero ($0).

_____ The following road improvements are impacted. The calculation of proportionate shares is summarized below.

Attachment G2: Weekday PM Peak Hour Project Trip Distribution & Assignment

Snohomish County Traffic Worksheet and Traffic Study Requirements for Developments in the City of Marysville

Snohomish County government, through an interlocal agreement (ILA) with the City of Marysville, may request traffic mitigation measures from any new development in the city that impacts roads in the unincorporated county. The City will impose the requested mitigation to the extent that the City determines that the mitigation is reasonably related to the impacts of the development. To determine the impacts, and to determine reasonable mitigation measures, the City of Marysville requires a traffic study from any development in the city that may have impacts on county roads. This 'traffic study' may be as simple as completing sections one and two of the county traffic worksheet below, or having a professional traffic engineer conduct a formal traffic study consistent with the requirements in section three below.

- If a development generates less than ten peak-hour trips and the applicant chooses Option A for mitigation payment (standard payment by percent of county impact fee), then the applicant will generally only have to fill out the first two sections of this traffic worksheet and complete a mitigation offer (see section four).
- However, if a development generates more than ten peak-hour trips, or if the applicant chooses Option B for mitigation payment (comprehensive impact analysis), then the applicant will have to fill out the first section of this worksheet, complete a separate traffic study consistent with the requirements in section three, and complete a mitigation offer (see Section Four).
- Applicants should submit all documents *to the City* as part of their initial submittal.
- Traffic study requirements for impacts on county roads are based on the County's traffic mitigation ordinance (Chapter 30.66B) and the city/county ILA. At the end of this document find references to the county contacts and county web site (sources for may of the documents related to traffic mitigation).
- Following review of the documents submitted, the County may request supplemental information and analysis as necessary to determine the impacts of the development in accordance with the city/county ILA. The City will require the proposed development to submit the supplemental information and analysis to the extent that the City determines that it is necessary to determine the impacts of the development.

Section One (1) Worksheet General Information

1. Name of Proposed Development Gemmer Residential

   City Development File Number (if known)_____

2. Name, Address and Phone Number of Applicant_____

   MJS Investors, 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

   Phone #: 425-417-6004

3. Development Site Address 1507 172nd Street NE, Marysville, WA

4. Is it a residential or commercial development? Yes (residential)

5. Description of Development (size and specific type)_____
   The proposed project will include up to 185 Single-Family Detached Homes. The site includes 1 existing Single-Family Detached Home that would be removed with the project.

6. How many new vehicle trips are expected to be generated by the proposed development? (For many common types of developments this information can be provided by the city or the county. For more complex developments trip generation may have to be determined under section three below)

   129 AM Peak Hour 184 PM Peak Hour 1,762 Average Daily Trips (ADT)

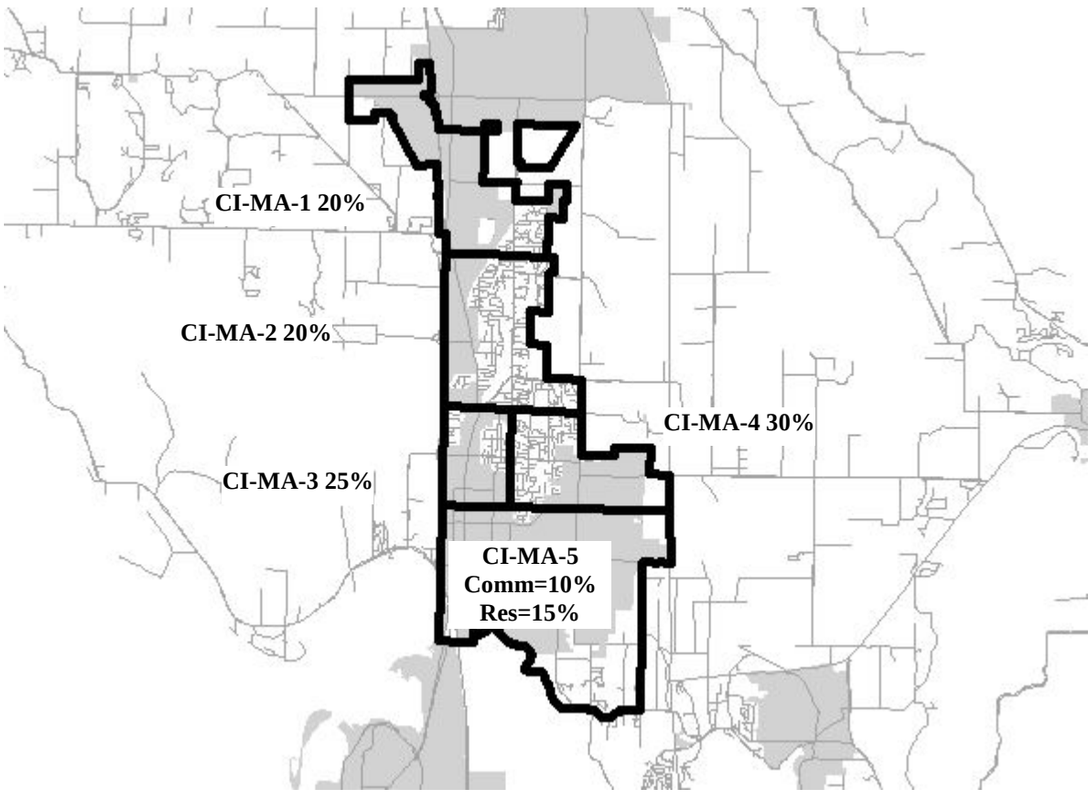
7. Proportionate Share Impact Mitigation: All applicants have two options in determining the amount of their traffic mitigation payment:

   x For determining the amount based on a percentage of the county fee go to section two.

   _____ For determining the amount based on a comprehensive traffic study go to section three.

Section Two (2) Proportionate Share Determined by Percentage of County Impact Fee

2(a) Calculation of Payment Amount



1. Standard default estimated percentage of trips impacting the City streets based on subareas (See below) 20 %

or

2. Other Percentage: (Note: See author's qualifications in section three below.) Estimated percentage of trips impacting county roads from attached trip distribution: _____ %

Sub-Area ID #	* City Subarea Description	Residential Developments	Commercial Developments
CI-MA-1	North of 136th ST SE.	20%	20%
CI-MA-2	North of 100th ST NE and South of 136th ST SE.	20%	20%
CI-MA-3	North of 76th ST NE, South of 100th ST SE, and West of 51st AV NE.	25%	25%
CI-MA-4	North of 76th ST NE, South of 100th ST SE, and East of 51st AV NE.	30%	30%
CI-MA-5	South of 76th ST NE.	15%	10%

* Note: Boundaries are either street centerlines or imaginary extensions of street centerlines in places where the actual streets do not exist.

3. Development New Average Daily Trip Generation (ADT) 1,762

4. Type of Development (Residential or Commercial) Residential

5. County Commercial Fee Rate $_____ 6. County Residential Fee Rate $ 185

(Note: Consistent with county code and the ILA, developments pay the rate in effect at the time of their submittal. As of 07/13/11 the rates were $39 for commercial developments and $46 for residential developments. Through ordinance, the County Council can change these rates at any time, so consult with the County or look at Snohomish County Code 30.66B.330 to find the latest fee rates.)

7. Calculation of Proportionate Share Impact Mitigation

20%	×	1,762	×	185	=	$ 65,194
#1 or #2 above: % of trips		#3 above: ADT		#5 or #6 above: Fee Rate		proportionate share mitigating payment

2(b) Determining whether or not an additional traffic study is necessary

Will the development generate more than 10 peak-hour trips *or* are there other impacts that need to be addressed (e.g., level of service, safety, or access and circulation)

_____ No. Skip section three and go to section four.

__X__ Yes. Read the introduction to section three and skip to section 3(b).

Section Three (3) Traffic Study Requirements

Introduction: This section outlines requirements for traffic studies for impacts on County roads. If an applicant chooses (or is required) to complete a traffic study, then it should be submitted along with this worksheet and a mitigation offer. (Note on Author's Qualifications: A traffic study under this section must be conducted by an engineer licensed to practice in the state of Washington with special training and experience in traffic engineering and, preferably, membership in the institute of transportation engineers. For individuals/firms not on the City's approved list, the developer will provide, with the traffic study, the credentials of the individual or firm performing the traffic study certifying compliance with these qualifications.)

3(a) Proportionate share impact mitigation based on comprehensive traffic study

1. Development's Trip Generation and Distribution. Determine the PM peak-hour trip generation and distribution for the development consistent with Section 3(b) below.
2. Impacted Improvements. Determine which of the road sections with planned improvements in the county's impact fee cost basis (Transportation Needs Report Appendix D) are impacted by three or more development-generated *directional* PM peak hour trips (PM PHT).
3. Current Counts. For each impacted improvement, provide current traffic counts to determine the PM PHT.
4. Reserve Capacity. Determine "reserve capacity" for each impacted improvement by subtracting the current PM PHT from the maximum service volume (MSV) for the existing facility. Reserve capacity is set to zero if current PM PHT exceeds the MSV. For MSVs see County DPW Rule 4224.
5. New Capacity. New capacity is the incremental increase in PHT that could be accommodated with the planned improvement. Determine the new capacity of each impacted improvement by subtracting the current MSV from the future MSV after the improvement.
6. Chargeable Capacity. For each impacted improvement, add the reserve capacity to the new capacity.
7. Final Adjusted Cost. Find the cost of each impacted improvement and make any adjustments used by the County for tax credits (see Transportation Needs Report Appendix D).
8. Capacity Cost per Peak-Hour Trip. For each impacted improvement, determine the capacity cost per PM PHT by dividing the final adjusted improvement cost by the chargeable capacity.
9. Traffic Impacts. From step one above, take the *total* number of PM PHT (in both directions) impacting each planned improvement.
10. Proportionate Share. For each impacted improvement, determine the proportionate share impact mitigation by multiplying the capacity cost per peak-hour trip by the number of PM PHT impacting the improvement.

3(b) Trip Generation and AM and PM Peak Hour Trip Distribution and Assignment

Calculate AM, PM and Daily trip generation consistent with the ITE Trip Generation Handbook and Snohomish County Public Works Rule 4220. Determine the trip distribution and assignments consistent with the County's document titled "Format for Trip Distributions"(available at County web site, see below).

- Within the developments transportation service area (TSA) the distributions will be carried out to each key intersection at which the approach or departure volumes on any leg have three (3) or more peak hour trips. Get the most current list of key intersections on the web site described below. Trips should be distributed onto the road system as it is expected to be in six years.
- The distribution should be a schematic map showing the broad distributions of trips in terms of percentages on different roads. Show all City boundaries.
- The assignment should be a schematic map with the impacted key intersections identified by ID# and turning movements for each shown in separate diagrams on the same page or on different pages. The assignment should also be presented in tabular form listing each intersection by intersection ID#, and the number of trips at each movement.

3(c) Additional Analysis for Developments Generating More Than Fifty (50) Peak Hour Trips

For large developments (i.e., those generating more than 50 peak-hour trips), the County may request mitigation for impacts on the level of service of County roads, documented safety locations (the County calls such locations "inadequate road conditions" or "IRCs"), and access or circulation. The traffic study requirements below are intended to disclose impacts. Based on this information the County may request through the City that the applicant provide additional information showing possible mitigation measures. If any off-site improvements were needed for mitigation the County would work with the applicant to determine requirements for right-of-way, construction plans, right-of-way use permits, construction/maintenance bonds, and other issues.

Impacts on Level of Service (LOS) of County Arterials

Contact Snohomish County Public Works for the most current list of arterial units in arrears and critical arterial units. Identify any arterial units in arrears or critical arterial units impacted by three or more directional peak-hour trips.

Impacts on Inadequate Road Conditions

Contact Snohomish County Public Works for a list of the current IRCs. Identify any IRCs impacted by three or more peak-hour trips. Note: Unlike LOS impacts in which at least three or more peak hour trips have to be added in one direction to require disclosure (e.g., 3 westbound), for IRCs, any three peak hour trips added to IRC locations are considered an impact for which disclosure is necessary (e.g., 2 westbound plus 1 eastbound).

Impacts on Access or Circulation

The County may request improvements to existing roads to provide safe and efficient access and/or circulation. In some instances, the County may request provisions for future County roads identified in the Comprehensive Plan or in Small Area Transportation Studies. If so, the County will request specific additional information through the City.

Section Four (4) Traffic Mitigation Offer to Snohomish County

The applicant should complete a traffic mitigation offer to Snohomish County that summarizes the mitigation identified in the county traffic worksheet and any additional traffic study. This will facilitate timely review of the development and processing of the application. The form to use for the mitigation offer is titled "Traffic Mitigation Offer to Snohomish County." This form is typically provided to all applicants along with this traffic study checklist. In addition, copies are available from the county contacts or the Snohomish County web site shown below.

Additional Information

County Web Site

Snohomish County Public Works has a web site with many documents related to traffic studies and mitigation requirements for developers. From the Snohomish County Home Page go to:

Re: PA24-008 – Lakewood Heights Rezone PRD – Technical Review 1

Dear Merle,

After preliminary review of the above referenced proposal, the Planning Division has the following comments:

1. Include File Number PA24-008 on all future correspondence, in addition to all site, civil and landscape plans.
2. Work with Public Works/WSDOT on the amount of right-of-way dedication needed for the round-about (RAB) at 11th Avenue and 172nd Street. The area dedicated can be used as open space in the interim, but will need to be dedicated as part of this proposal. Please provide an updated density calculation deducting the area dedicated.
3. The project narrative suggests another BLA is proposed. If another BLA is proposed, please provide a layout of the proposed adjusted lots.
4. Is the project proposed to be phased? No phasing plan was mentioned in the project narrative, but phases are shown on site plan. If phasing is proposed, please describe the phasing plan. It appears that if Phase 1 is constructed as depicted, there will be only one access point. Marysville Fire Marshall may require fire sprinklers in units for which there is only one access point.
5. Please depict all plottable easements/encumbrances listed in the title report on the site plan and any existing water wells and/or septic systems within 200 feet of the project.
6. The preliminary Civil Plans have a 'Road C' depicted on some sheets, but not all, and there is no 'Road C' on the plat map. Please ensure road names are consistent on all plan sheets/sets.
7. It does not appear this property is eligible for Residential Density Incentive (RDI) 5a. The nearest fie and/or police station is well over 1 mile away. Please identify an alternative RDI to earn the desired additional units. Please also note that partial units cannot be earned, only whole units (see MMC 22C.090.050(4)).
8. If you do not intend to utilize RDI 3a, please remove it from the table on sheet P3.
9. Please identify where perimeter fencing is proposed in order to achieve bonus units so that staff can verify these areas are not otherwise required by code to have fencing installed.

10. Pursuant to MMC 22C.065.040(2)(a), the site shall be oriented and designed to create an attractive street edge and accommodate pedestrian access. The following provisions apply:

(i) The street edge shall be defined with buildings, landscaping or other features.

(ii) Primary building entrance(s) shall face the street unless it is not feasible due to parcel size, topography, environmental conditions, or other factors as determined by the director, and alternate design elements are incorporated into the facade which enliven the streetscape.

(iii) Buildings with individual ground floor entries should face the street and/or common open space to the extent possible.

(iv) Buildings shall provide windows that face the street to provide "eyes on the street" for safety. To meet this requirement, at least 15 percent of the facade facing the street shall be occupied by transparent windows or doors. See Figure 2.

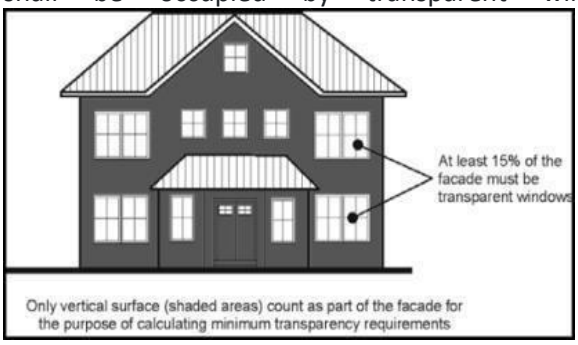

Figure 2 – Illustration of facade transparency requirements which enhance safety and the relationship to the street front

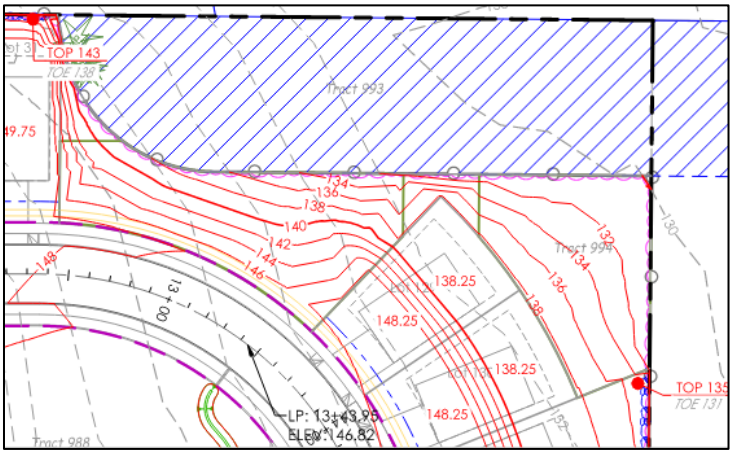
(v) Provide for a sidewalk at least five feet wide if there is not space in the public right-of-way.

(vi) Provide building entries that are accessed from the sidewalk. These pathways must be separated from parking and drive aisles and must not cross a parking lot.

(vii) Unless the building is immediately adjacent to the public ROW, the yard or open space between the street and the building front shall be landscaped. At least 20 percent of the landscaped area shall be trees and shrubs.



(viii) Private ground floor living spaces directly facing a public ROW and within 60 feet of the street shall be screened with planting (shrubs and trees) at least two feet high.

The current layout/design on 11th Avenue does not meet these standards. City staff and the Community Development Director have discussed and determined a couple of options that would meet the standards. The options are outlined below:

- Orient homes on lots adjacent to 11th Avenue so that the front/primary entrance faces 11th Avenue, including pedestrian pathways connecting the front entries to the public sidewalk.
- As an alternative to home orientation towards 11th Avenue, the Director has agreed to allow re-alignment of the landscape tracts adjacent to 11th Avenue to be a consistent, uniform width at least 20 feet wide, (tracts 981, 982, 983, and 980) and installation of a decorative fence (not standard 6' cedar), decorative masonry wall, or other hardscaped fencing.

11. Depending on the option you choose in item 10 above, an alternative RDI for the units earned using 7f may be needed.
12. Pursuant to MMC 22C.065.060(3), Where lots front on a public street, the house shall have doors and windows which face the street. Houses must have a distinct entry feature such as a porch or weather-covered entryway with an entry feature that is at least 60 square feet with no dimension less than six feet. Where lots front on a common open space or pathway, the requirements for orientation are the same as for a public street.

    The director may approve a street orientation or entryway with dimensions different than specified herein; provided, the entry visually articulates the front facade of the dwelling so as to create a distinct entryway, meets setback requirements, provides weather cover, has a minimum dimension of four feet, and is attached to the home.
13. Fencing and/or landscaping shall separate, while maintaining visual observability of, recreation areas from adjacent lots, parking areas, driveways, streets, and other accesses. Additional landscaping should be installed along the eastern boundary of Tract 985, and Tract 994.
14. The grading in Tract 994 appears rather steep. Is this conducive for recreation and proposed amenities?

15. Please provide base and top elevations for all retaining walls on civil plans.
16. Pursuant to MMC 22G.080.100(2)(g)(iii), trail segments shall be improved with an all-weather surface (gravel surfacing is not considered an all-weather surface). Please revise accordingly.
15. On the interior plat roads, the single family residences should face the street. Where side yards need to abut the street along arterials or the interior plat roads, an architectural approach similar to what is shown below should be proposed in lieu of the house facing the street. In the example below, the front of the house is oriented towards the auto court while the elevation that faces the street has

variation in siding, windows, trims, and a gable entry feature with decorative posts that gives the sense of the house being oriented towards the street. On lots that take access off of an auto court that have a side yard abutting the street, a pedestrian pathway should be provided to the street and auto court (lots 88, 93, 81, 84, 72, 67, 163, 168, 147, 179, and 182). This orientation, coupled with a pedestrian pathway that connects both towards the autocourt and the sidewalk along the street side of the interior plat roads, meets the intent of the Lakewood Neighborhood Master Plan design guidelines, and preserves private back yards.

16. Please review comments from the below related to the round-about at 11th Avenue and 172nd Street.

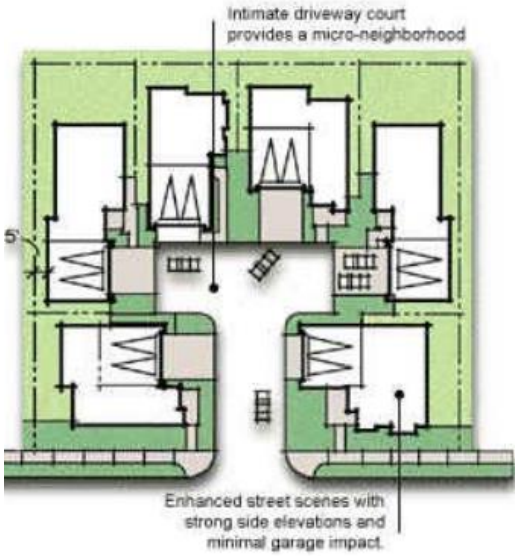
    16.1. See comments from Community Transit related to the round-about (RAB) and bus stop locations.

    16.2. Please see comments from WSDOT related to RAB and TIA.

    16.3. Please see comments from City Traffic Engineer and Civil Plan Reviewer related to RAB.

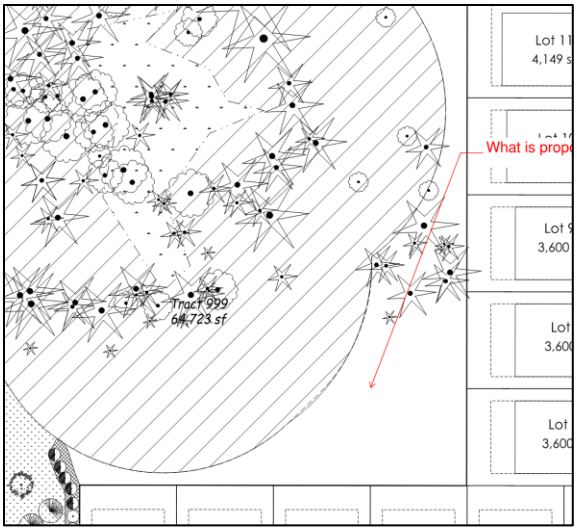
17. Prior to civil construction plan approval, the applicant shall demonstrate that the natural topography of the site is preserved to the extent feasible, and that the proposal complies with the design criteria outlined in MMC Section 22D.050.030(4). The applicant shall design the project to ensure a smooth transition to neighboring sites.

18. Overhead utilities on all frontages on 172nd Street and 11th Avenue, as well as internal plat roads, shall be placed underground.



19. Pursuant to MMC 22C.065.130(3) *Block Size,* new development shall provide an integrated and connected network of streets to provide "direct" walking route options, orientation, a sense of place, and multiple travel route options. A street network dominated by long, irregular loop roads and cul-de-sacs is not appropriate. Blocks shall be designed to provide vehicular connections at intervals no greater than 600 feet and pedestrian access at intervals no greater than 300 feet (200 feet is preferred). It appears additional pedestrian access/connections are needed to meet the appropriate intervals.

20. Shared access driveways/autocourts will be required to be constructed with scored concrete, paving blocks, bricks, or other ornamental pavers to clearly indicate that the entire surface is intended for pedestrians as well as vehicles, as outlined in the City of Marysville Design Guidelines and Engineering Design and Development Standard (EDDS) Section 3-219, or as amended. A detail of the surfacing of



the autocourt will be required to be provided on the civil construction plans and approved by the City Engineer.

20.1. Tract 969 does not appear meet the definition or intent and design standards of an autocourt. An autocourt provides ingress and egress to clusters of dwellings; ends in a 'court' or courtyard area used for garage access and other activities; and is walled by buildings on three sides. See examples of what meets the standards below.

21. Please see comments from Deputy Fire Marshall, Brian Merkley that include, in part, the following:
    - At a minimum, the following lots will require fire sprinklers due to distance from ROW: 12-13, 42-45, 69-70, 90-91, 103-104, 165-166, 174-177, and 180.
    - Additional hydrants will need to be added to satisfy spacing requirements. Road B in front of Tract 996 and in front of Lot 59.
22. The applicant shall be required to obtain all necessary Federal, State and local permits for any critical area or buffer impacts prior to commencing construction.
23. Decorative street lighting shall be provided where required by the City's Traffic Engineer Manager pursuant to MMC 22C.065.390, *Decorative Street Lighting Standards*.
24. A final landscape plan shall be required to be approved, prior to civil construction plan approval, and designed to comply with the applicable provisions outlined in MMC Chapter 22C.120, *Landscaping and Screening* and MMC 22C.065. **Specifically, please revise the Landscaping Plan to include:**
    24.1. Detailed planting plan for the mitigation planting plan including specifics for buffer enhancement areas and buffer replacement areas.
    24.2. Typical side view of perimeter landscape buffers.
    24.3. Please identify what is proposed in the white area in tract 999 below.

24. Proposed fencing shall be in accordance with MMC 22C.065.120.

25. Prior to recording the **FINAL BSP** the applicant shall be required to provide **FINAL** restrictive covenants as required by MMC 22G.080.120 and including provisions to address parking enforcement, together with a statement from a private attorney as to the adequacy of the same to fulfill the requirements of the PRD code.

26. The following are the impact fees that apply to this project. School and Park fees are based on the fee in effect at this time a building permit is accepted by the City.

Impact Fee Type	Impact Fee Rate
Traffic	$6,300 per SFR
Parks	$1,905 per SFR
Schools (Lakewood)	$0 per SFR

Enclosed are copies of comments received from other City departments, and reviewing agencies. Revised application materials must be accompanied with a written response detailing how each of the items outlined above and attached hereto have been addressed, and what sheet the change(s) can be found on.

After you have had an opportunity to review, please let me know what technical review comments you need clarification on. Once received, I can set up a conference meeting with all of the applicable city and agency representatives, if needed. If you have any questions, please do not hesitate to contact me at 360.363.8215, or by e-mail at ahess@marysvillewa.gov.

Sincerely,

Amy Hess

[CAUTION:] This email originated from outside the City of Marysville. **Do not click links or open attachments** unless you recognize the sender and know the content is safe. Contact helpdesk if you have any concerns or questions.

Hi Amy,

Community Transit has some concerns about the proposed development, Lakewood Heights Planned Residential Development, namely the geometry of the roundabout located on 172nd St NE and 11th Ave NE. The displayed geometry does not appear to meet standards that would allow bus operations, especially in the westbound direction.

There are also concerns about access to Lakewood High School. We are aware of a lack of infrastructure, namely sidewalks and pedestrian crossings across 172nd St NE that are creating unsafe situations for the high school students that use our service on Route 240. The addition of, and/or relocation of bus stops as part of this project, along with potential pedestrian infrastructure (such as an RRFB or HAWK), could alleviate that issue and provide safer connectivity for students and residents in this area.

We would appreciate the opportunity to meet to discuss these concerns and propose potential solutions by integrating our transit service better in this area.

Prior to your deadline of April 25, our team has the following availability. Please let me know if you are able to meet at any of these times to discuss the project and its implications on Community Transit's service:

- Monday, April 22 – 3:00 pm - 5:00 pm
- Tuesday, April 23 – 4:00 pm - 5:00 pm
- Thursday, April 25 – 10:30 am - 12:00 pm

THIS IS NOT A MEETING INVITE – THIS IS A REQUEST FOR REVIEW (RFR) WITH COMMENTS REQUES RETURNED BY APRIL 25, 2024

File Number:	PA24-008
Project Title:	Lakewood Heights Planned Residential Development

Project Description:	Applicant has requested Planned Residential Development (PRD) and Binding Site Plan State Environmental Policy Act (SEPA) review in order to construct a 182-lot Planned Development on approximately 29.48 acres, utilizing residential density incentives MMC 22G.090. The project contains one (1) Category III wetland, and buffer fr wetland extends on-site. Project will construct associated improvements, include cle and utility and roadway extensions. The project proposes a concurrent rezone to zoning of the underlying parcels with the project proposal.
Applicant:	MJS Investors
Project Location:	1125 & 1507 172nd Street NE
APNs:	31051900400900 and 31051900401100

Some people who received this message don't often get email from kathryn.boris@commtrans.org. Learn why this is important

Hi Amy,

Reaching out again due to the limited timeline for comments to be submitted. There are many concerns about the roundabout design and I would like to meet with you to discuss this and bus stop placement in the area. Please let me know if you are unable to attend - I am also happy to meet with any staff from Marysville that are available.

Please note the attached document regarding roundabout design. This document is a draft from King County Metro but can be used in place of Community Transit's standards. CT's current roundabout standard is being updated and is not available at this time.

Please ensure that the roundabout at 172nd St NE and 11th Ave NE complies with these standards. Route 240 serves this corridor and provides important access to the area, connecting communities to the west and north that would otherwise be inaccessible to transit. The design of this roundabout is key to ensuring that access remains in place in the future.

It has also come to my attention that there were developments proposed in adjacent parcels south and east of this proposed development. With those developments, bus stops were requested. Our staff are unaware of the outcome of the requests on prior development proposals, could you please let me know what occurred with those? That will impact our comments for the Lakewood Heights community.

Thank you,
Kathryn Boris (she/her/hers)
Sr. Transit Integration Planner

DRAFT

1 Introduction

The Roundabout Guidelines equip planners, engineers, and stakeholders with a clear understanding of important factors when designing a roundabout for King County Metro bus operations. The considerations outlined in this document allow bus operators to consistently navigate a roundabout without damaging their coach or injuring passengers onboard. Guidelines are aimed at preventing on board passengers from being jostled, slipping, falling, or losing possession of belongings, and providing safe and convenient access for passengers at nearby stops.

King County Metro operates transit coaches of differing length and handling characteristics on roadways owned by other agencies, including the state (Washington State Department of Transportation, WSDOT), the county (King County Roads), and 39 towns and cities within the county. It is important for planners, engineers, and stakeholders to consult with Metro staff early during the planning and development of a new roundabout configuration proposal on roadways with existing or future transit service. Consulting these guidelines can help planners, engineers, and stakeholders anticipate Metro's needs prior to discussions with Metro, which can help streamline the coordination process. Please refer to the checklist in Section 2 to obtain Metro's review/approval or concurrence of proposed roundabouts and related improvements.

Principles to consider when designing roundabouts for transit vehicles include:

- Design turning movements assuming buses will not traverse across the inner circle or mount the truck apron. Use caution when designing curbs and truck aprons to be mountable by bus wheels without jostling passengers.
- Coordinate with Metro on multilane roundabouts to determine the appropriate design approach for bus operations.
- Use the proper design vehicle settings for AutoTURN analysis.
- Review the design of raised crosswalks for vertical bus clearance.
- Consider pedestrian comfort and safety as well as bus operations as relates to bus stop placement and pedestrian pathways.
- Consider signalization, signage, and priority access for transit speed, reliability, and safety.

Roundabouts are a proven safety measure that substantially reduces fatal and injury crashes. As roundabouts become more prevalent in the Puget Sound Region, there is a growing need to integrate these transit-specific considerations into the planning and design process.

Because each roundabout is in a unique built environment, each roundabout is also unique. As a result, the document articulates design guidance and allows for flexibility when practical and necessary.

The checklist in Section 2 is designed to serve as a quick reference. Section 3 is focused on definitions and early involvement. Section 4 focuses on the bus as the design vehicle and street design elements.

DRAFT

2 Transit-Friendly Roundabouts Checklist

King County Metro is providing this checklist on roundabout use and transit design considerations to its interagency partners, developers, and consultants. Agencies and jurisdictions planning roundabouts should review current and future bus service and engage King County Metro at plansreview@kingcounty.gov as early as possible or reach out directly to your Metro project contact.

☐ **Coordination with Metro: Planning and Concept Phase**

- ☐ Send details to plansreview@kingcounty.gov.
- ☐ Document bus routes and bus stops on the roadway where the roundabout is planned:
  - King County Transit Route map
  - King County Bus Stop Map – zoom in to see individual stops
  - Metro Connects Maps –click on the Metro Connects tile to view "Metro Connects Interim Network" and "Metro Connects 2050 Network".
- ☐ Document site constraints that may impact transit operations.
- ☐ Describe the planning and design approach as relates to plans for considering transit operations and transit access.
- ☐ Provide the assumed type of roundabout (mini, compact, single lane, or multi-lane).
- ☐ If completing an Intersection Control Evaluation, include King County Metro in the process.
- ☐ Consult with Metro before planning mini-roundabouts and compact roundabouts on transit routes – these designs are particularly challenging in terms of transit operations and include significant transit impacts.

☐ **Multilane Roundabouts: Planning and Concept Phase**

- ☐ Include King County Metro in the performance-based planning and design process in designing for buses to operate in lane or by splitting lanes (See Section 4.2).[1]
- ☐ Provide a sketch-level assessment of in-lane operations and compare to splitting lanes during early design.

☐ **Bus Stops and Pedestrian Access: Planning and Concept Phase**

- ☐ Coordinate with Metro on bus stop location and design.
- ☐ See Section 4.3 for considerations to factor in for near-side or far-side stops at a roundabout.
- ☐ Avoid in-lane near-side stops at multilane roundabouts: Metro prefers in-lane near-side stops in single lane roundabouts but prefers far-side in-lane stops in multilane roundabouts because they help ensure pedestrian sightlines and minimize transit delay.
- ☐ Provide a conceptual proposal for bus stop locations and types with supporting logic.
- ☐ Design pedestrian access to transit for safety, comfort, and convenience (see Section 4.3 for recommendations). Account for increased pedestrian volumes near transit stations and mobility hubs.

☐ **Coordination with Metro: Design Phase**

- ☐ Once available, send details to plansreview@kingcounty.gov.

[1] Splitting lanes is a non-standard movement for Metro operations. Metro prefers designs for buses to stay in lane but recognizes this will increase the size of the roundabout, increase operating speeds, and impact safety. In places with high pedestrian volumes, Metro may favor roundabouts designed for lane splitting due to lower operating speeds.

DRAFT

- ☐ Provide signage and striping plans.
- ☐ Provide paving plans and curbing details.
- ☐ Provide truck apron details.
- ☐ Provide typical sections showing proposed cross slope at entries and in circulating roadway.
- ☐ Provide estimated 100% design date, construction date, completion date, and timeline updates.

☐ **Bus Stops and Pedestrian Access: Design Phase**

- ☐ Work with your point of contact at Metro and the Transit Route Facilities team to determine bus lengths and number of buses to be accommodated at new bus stop locations.
- ☐ Ensure that ample space is provided for boarding at bus door(s) - design stop platform and approaching curves so both doors of the bus align with the curb (see Section 4.3).
- ☐ Ensure that sightlines for pedestrian crossings are not obstructed.
- ☐ If applicable, ensure bus has sufficient clearance at raised crosswalks.
- ☐ Communicate potential construction impacts (like bus stop relocation) for existing bus stops.
- ☐ Where pedestrians are crossing legs of the roundabout to access transit, provide a design check such as in NCHRP 1043 Appendices 5, 6, and 7.

☐ **Design Vehicles, AutoTURN, and swept path diagrams**

- ☐ Provide swept path diagrams that refer to Metro's design vehicle and AutoTURN specifications (see Section 4.1).
- ☐ Use appropriate design vehicle for King County Metro Transit (Section 4.1) - additional details for Metro AutoTURN settings are available in Chapter 3.3 of Metro's Transit Route Facilities Guidelines.
- ☐ Ensure that mirrors and bike racks are included in transit design vehicles.
- ☐ Analyze turning movements with buses maintaining a 5-10 mph speed throughout the roundabout - lower speeds at pedestrian and bicycle crossings are acceptable.
- ☐ Ensure buses can navigate a roundabout without driving on truck aprons or curbs.
- ☐ Provide vertical clearance details of buses at raised crosswalks, truck aprons, and entry/exit points.

☐ **Signage**

- ☐ Include signage such as "Yield to Heavy Vehicles", "Yield to all Lanes", or "Large Vehicles take both lanes."

☐ **Review the following *preferred* design elements**

- ☐ For multilane roundabouts, if designed to stay in lane, use best practices identified in NCHRP 1043 to keep buses from drifting into adjacent lanes.
- ☐ Apply a sloped curb on truck aprons as featured in Section 4.7 (instead of a rolled curb), as buses may occasionally track onto the truck apron despite design accommodations.
- ☐ Consult with Metro before planning mini-roundabouts and compact roundabouts on transit routes – these designs are particularly challenging in terms of transit operations and include significant transit impacts (Section 3.1).

DRAFT

3 Planning, Project Development, and Concept Development

This section provides more details on coordinating with Metro throughout the planning and concept phases.

The details included in this document are meant to serve as guidelines. In circumstances where guidelines cannot be met, Metro staff will work with the jurisdiction to determine collaboratively which features should be modified or eliminated.

Metro expects designers to supplement this transit-specific roundabout guidance with other guidelines and requirements. *NCHRP Research Report 1043: Guide for Roundabouts*, released in June 2023, provides a context-sensitive, performance-based design approach to designing roundabouts. King County Metro's *Transit Route Facilities Guidelines,* most recently updated in 2018, provides details about bus stops, transit coach characteristic, and street design standards. U.S. Access Board's *Public Right-of-Way Accessibility Guidelines (PROWAG)*, Final Rule issued in August 2023, provides requirements for sidewalks and shared use pathways.

3.1 Roundabout Definition and Characteristics

NCHRP 1043 defines a roundabout as "a circular intersection form in which traffic travels counterclockwise (in the United States and other countries that drive on the right-hand side of the road) around a central island and entering traffic must yield to circulating traffic." This document does not apply to traffic calming circles or rotaries. Traffic calming circles, common in King County, have smaller diameters, are distinct from roundabouts, and typically are not suitable for Metro operations. Rotaries, which are distinguished by having large diameters often greater than 300 ft, are not common in Washington.

Table 1 shows different types of roundabouts. All roundabouts on transit corridors should be designed so buses do not need to traverse the center island or mount the truck apron - in general, mini roundabouts should not be used on transit routes, and compact roundabouts may be acceptable if 40-foot buses can stay on the roadway. Larger roundabouts that can accommodate buses, like single-lane and multilane roundabouts, should be designed so buses do not need to mount the truck apron. To minimize safety concerns for bus passengers, roundabouts on transit routes should still be planned with bus-friendly truck apron designs (see section 4.7: Curb and Truck Apron Design) that allow for the occasional situation of bus mounting.

DRAFT

Table 1: Comparison of common roundabout features across types of roundabouts. (adapted from NCHRP 1043)

Roundabout Feature	Mini-Roundabout	Compact Roundabout	Single-lane Roundabout	Multilane Roundabout
Meets bus operations requirements for 40' -60' coaches?	No	Unlikely	Yes, with proper design	Yes, with proper design
Central island	Requires large vehicles to traverse central island, which is not feasible for buses	Requires vehicles longer than 40' to traverse central island	Non-traversable, but typically includes truck apron	Non-traversable, but typically includes truck apron
Common Intercircle Diameter (ICD) range	45 ft to 90 ft	65 ft to 120 ft	90 ft to 180 ft	150 ft to 200 ft
Maximum number of circulating lanes conflicting with each entry	1	1	1	2+

- 2.3.2 Roundabouts with Traversable Elements

3.2 Involve Metro Early

Provide transit-related details to Metro early, including during planning studies and alternatives identification and evaluation. Performance goals and outcomes related to transit can influence a project even before project design begins. As a project evolves from preliminary to final design, it becomes more difficult to appropriately design for buses and achieve Metro's desired outcomes.

If Metro-operated buses are passing through the project area, the design team is expected to engage Metro throughout the design process, including in efforts like Intersection Control Evaluations (ICE) on state roads.

Metro expects project goals and desired outcomes to include safe and reliable transit operations and active transportation access to bus stops. In differentiating between *accommodating* and *designing* for a large vehicle, Metro expects roundabouts on transit routes to be *designed* for transit. The Metro-specific bus should be used as a *design vehicle* that regularly uses the facility rather than an occasional larger vehicle to be *accommodated*. With these transit goals and performance measures in place, Metro is interested in collaborating with jurisdictions throughout the iterative performance-based approach outlined in NCHRP 1043 Chapter 3.

DRAFT

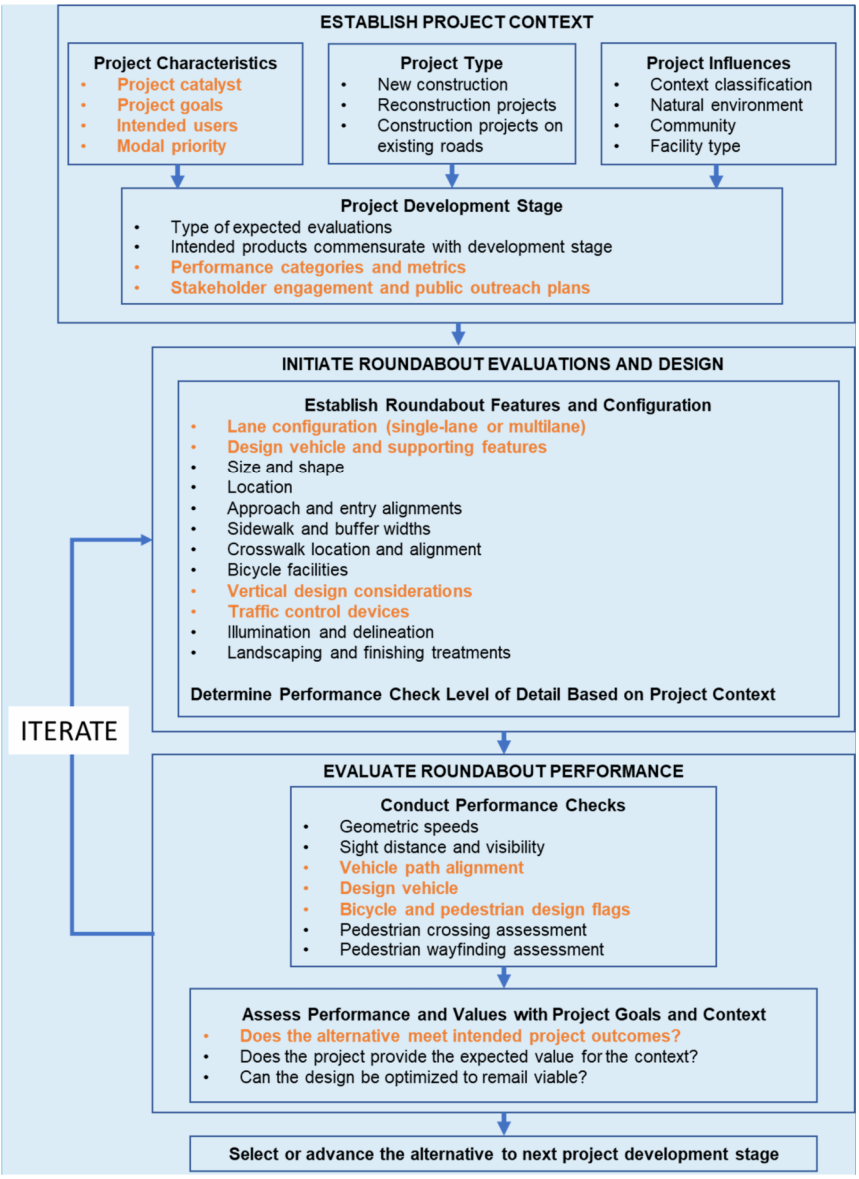

*Figure 1: Roundabout design process illustrating the iterative nature of project planning, preliminary design, and final design (source: NCHRP 1043 Section 9.1). Metro areas of interest shown in **bold orange**.*

Commented [BL2]: Update for final production. Image created in PPT, pasted as picture. Saved in project files. I couldn't get it to paste in a format that is readable for vision impaired without messing up the format.

4 Vehicle Characteristics and Street Design

This section includes guidance on transit design elements, both for the bus and people accessing the bus by foot or bike. Design elements should be considered in addition to those required by the design jurisdiction. Metro operates both 40-foot and 60-foot motorcoaches on bus routes in King County. Metro's operators are responsible for maintaining rider safety during every trip.

4.1 The Metro Bus as the Design Vehicle

As described in Section 4.4.4 of NCHRP 1043, transit buses may include fixed chassis and articulated vehicles. They can have a variety of wheelbase lengths as well as different distances between the bumpers and the outermost axles. These factors affect the swept path of the bus and potentially impact areas beyond the curb, such as signs, poles, and other fixed objects. AutoTURN software can verify swept path and vertical clearance for Metro buses.

Use Metro's custom design vehicles in AutoTURN: Metro developed custom AutoTURN settings after finding that the national AASHTO bus design vehicles, the BUS-40 and BUS 45, do not match the specifications of Metro coaches. When designing horizontal and vertical curves, Metro requires using the custom AutoTURN settings with bicycle rack and side mirror clearance outlined in Metro's Transit Facilities Guidelines, Chapter 3.3: AutoTURN. Controlling speed is very important for Metro operations and will need to be emphasized during the design process. Analyze turning movements with buses maintaining a 5-10 mph speed throughout the roundabout. Lower speeds at pedestrian and bicycle crossings are acceptable. Figure 2 shows parameters at the time these guidelines were published.

DRAFT

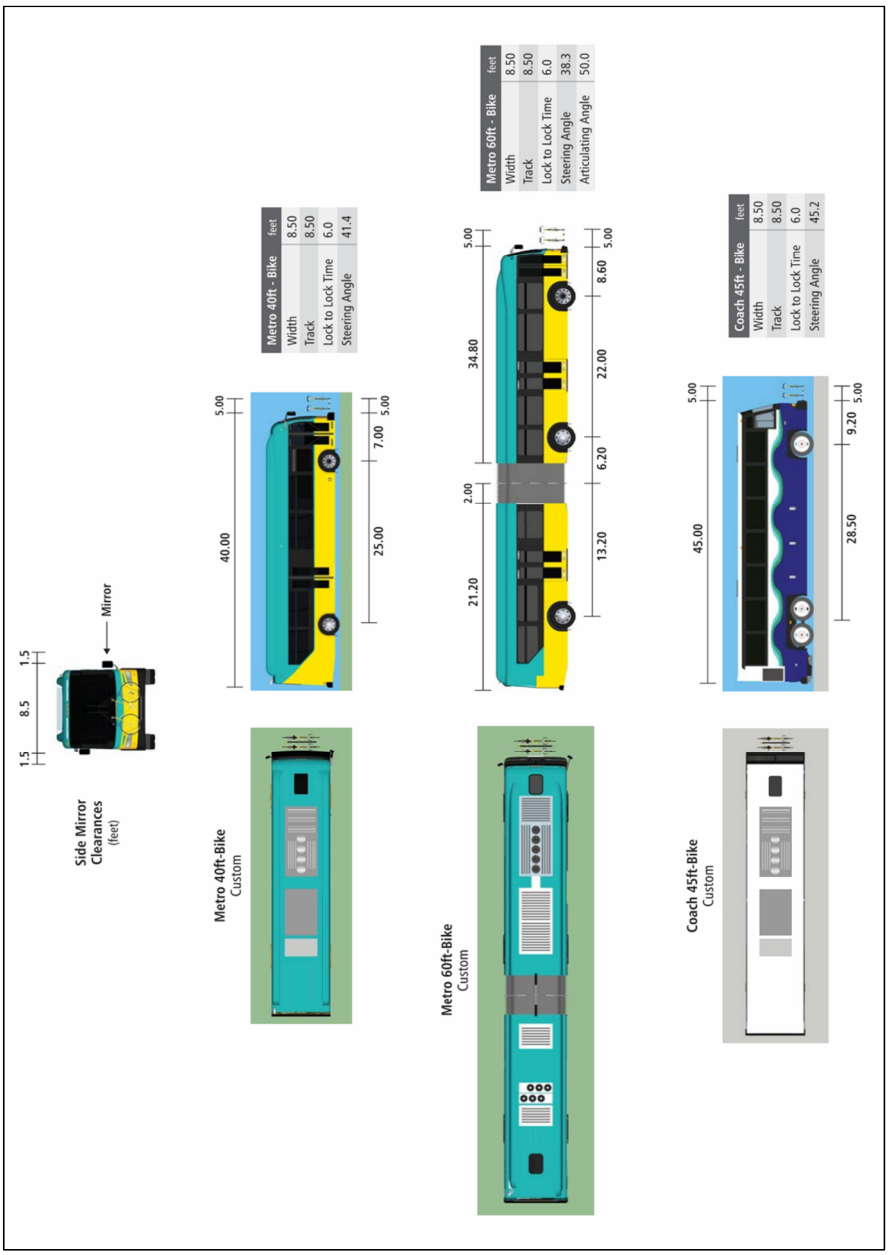

Figure 2: AutoTURN Vehicle Modifications with Deployed Bike Racks

Buses should not need to use truck aprons: Passenger buses need to be accommodated within the circulatory roadway without tracking over the truck apron, which could jostle bus occupants. Note the Metro 60-foot bus travels through a roundabout more easily than the 40-foot bus, although both should be tested in AutoTURN. Metro encourages the use of truck apron designs that will allow for occasional and incidental use by buses without disturbing passengers (see section 4.7: Curb and Truck Apron Design).

4.2 Multilane Roundabouts

For multilane roundabouts, designers should work with Metro during sketch design to decide if buses will operate straddling lane (also known as lane splitting) or staying in lane. The design approach for trucks and buses needs to be established early in project planning and design in coordination with Metro staff, as it can affect the safety performance and operational effects for other users. NCHRP 1043 Section 7.2.4 discusses trade-offs between designs to stay in lane and designs to split lanes for large vehicles.

Transit operators are required to *qualify* on a particular route before they can drive the route themselves. During route qualification, operators receive training on specific characteristics and techniques for driving the route safely and efficiently. When a route includes a roundabout, instructions for navigating the roundabout will be provided as part of the route qualification process, including instructions about whether to stay in lane or split lanes while traversing the roundabout.

Lane width considerations: Metro's Transit Route Facilities Guidance Section 3.2.2 calls for 11 feet minimum lanes to accommodate turning movements for buses and to prevent them from encroaching into the adjacent lane. This minimum width applies to roundabout approaches but does not apply to the circulating area. Instead, NCHRP 1043 Section 4.4 notes that the swept path of the truck or bus may be the critical design dimension. It also notes that, "designing all movements for the largest possible truck can lead to negative safety and operational performance issues for other roundabout users, particularly

people walking and biking. Practitioners need to configure roundabouts to best serve large vehicles without sacrificing the safety performance and comfort levels of other users."

Designing for in-lane roundabouts: Metro prefers to stay in lane as it is consistent with Metro operational guidance and offers the optimal speed and reliability benefits for transit. However, Metro acknowledges that there are safety tradeoffs for in-lane operations when considering all roadway users. In-lane designs for large vehicles like buses typically result in a larger overall roundabout radii and wider lanes, which increases speeds and requires a larger footprint for the roundabout.

In-lane designs that do not accommodate the Metro design vehicle can result in a bus over-tracking into other lanes, which may create conflicts with other roundabout users.

Designing for lane splitting: Splitting or straddling lanes is considered a non-standard movement for Metro operations. In places with high pedestrian volumes or other design constraints, Metro may support roundabouts designed for lane splitting due to lower operating speeds. Instructions for splitting lanes will need to be included in the operator route qualification process and may require additional operator training materials (e.g., diagrams or videos)

DRAFT

NCHRP 1043 guidance for straddling lanes is mixed. Authors advise to design for trucks to straddle lanes in most situations, as research suggests truck drivers do not attempt stay in lane. However, Section 10.5.3 notes that a transit agency may necessitate accommodating buses within their own lane to travel adjacent to a passenger car in places with frequent bus service as shown below.

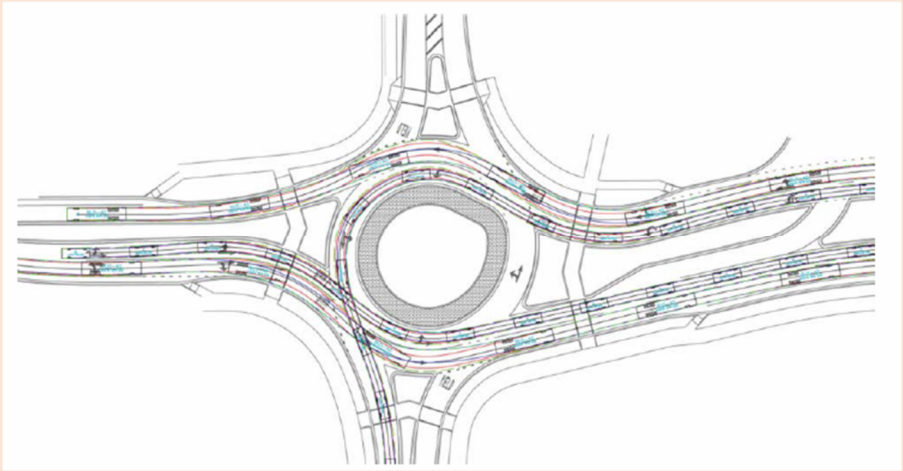

Figure 3: Example of side-by-side navigation for bus travelling straight and passenger car. (Source: NCHRP 1043, Kittelson & Associates)

For straddle-lane design, trucks and buses occupy more than one lane, meaning no vertical lane separation can be included in the entrance, circulating lanes, and exiting. Therefore, one objective for straddle-lane design becomes maintaining lane discipline for passenger cars (i.e. preventing lane drift) by achieving path alignment for passenger cars. Obtaining acceptable view angles is a related second objective. These two objectives require vehicles be staggered at the entrance so vehicles in the outside lane can see in front of the vehicle in the adjacent lane to the left.

Commented [BL3]: For final production, we will need to set picture background to transparent if we use this format.

4.3 Bus Stops

Bus stop placement may vary for each roundabout project in response to several factors, including the number of lanes, site topography, transit service design, locations of popular pedestrian destinations, and the surrounding pedestrian sidewalk network.

Bus stop placement should optimize safety, accessibility, and transit operations: Jurisdiction partners should reach out to King County Metro early in the planning phase to determine which locations best support the following transit needs:

- Safety – ensure the safety at pedestrian crossings as well as for people entering or exiting the bus. In-lane near-side stops at multilane roundabouts should be avoided because vehicles in the next lane may not see pedestrians. Near-side stops at single-lane roundabouts may reduce the risk of a passenger fall from riders intending to exit at the next stop standing up when the coach is navigating through the roundabout.
- Access – bus stops sited closer to intersections and roundabouts improve accessibility and reduce walking distances. Bus stops should be sited in locations that minimize pedestrian roundabout crossings to access local destinations or to transfer between transit routes, if possible.
- Operations - consider bus stop placement and design that balances safety and bus reliability with minimizing general purpose vehicle traffic spilling back into the roundabout. Metro prefers in-lane stops as described in Metro's Transit Route Facilities (Chapter 3) because they improve transit travel times and reduce delay to transit vehicles. A pull-out may force a bus to wait a long time to re-enter the travel lane where traffic volumes are high.

Given the safety, access, and operations considerations, Metro prefers near-side in-lane stops in single lane roundabouts and far-side in-lane stops in multilane roundabouts. Location context and pedestrian travel patterns will influence final bus stop siting and design.

Bus stop pull-outs: Bus stop pull-outs may be appropriate where near-side stops on multilane roundabouts minimize out-of-direction pedestrian travel. When bus stop pull-outs are required due to stop location impeding sight lines, Metro and partner agencies have used the following criteria (in addition to national guidelines) to design bus stops in pull-outs near roundabouts:[2]

- Design must accommodate bus space based on need. For example, a stop may need to accommodate two 60-foot articulated coaches, each with bike racks deployed.
- For the front coach, the distance from the face of curb on the platform to each of the doors is to be within 6 inches.
- For the second coach, the front door is to be within 6 inches horizontally from the face of curb on the platform. If the back doors of the second coach are more than the desirable 6 inches away from the platform, they are to be at least 18 inches away to allow for a safe space for passengers to step off the coach.

[2] Adopted from WSDOT *I-405, NE 85th Street Interchange and In-lane BRT Station Project's Request for Proposal*, 2.27.5.1.2 Bus Docking, 20210301 V1.

- Coaches are to be fully within the bus pull-out when docking.

DRAFT

Designers can refer to National guidance in NCHRP 1043 Section 10.13 (p 10-95) for further details. It is consistent with Metro's preferences, except Metro has a strong preference for in-lane stops:

To provide the best quality service for bus passengers, bus stops are located as close to pedestrian crossings as possible to minimize out-of-direction travel.

If a bus stop on the entry side of the roundabout (a near-side stop) is chosen, it will be located and designed as follows:

- *On a single-lane approach, the bus stop could be in the travel lane immediately upstream of the pedestrian crossing.*
- *On a multilane approach, a near-side bus stop in the travel lane is to be avoided because vehicles in the lane next to the bus may not see pedestrians and create a multiple-threat condition. [NCHRP 1043 identifies that] a pull-out compatible with the pedestrian and bicycle circulation system is instead used. However, a bus exiting the pull-out may obscure the visibility between pedestrians and oncoming motor vehicles; a bus stop on the exit side may be preferable.*

Because Metro uses in-lane stops, Metro prefers far-side stops on multilane roundabouts.

If a bus stop on the exit side of the roundabout (a far-side stop) is chosen, it will be located and designed as follows:

- *Bus stops are located immediately beyond the pedestrian crossing to improve visibility of pedestrians to other exiting vehicles. Proximity to the crosswalk is preferable to minimize out-of-direction travel for pedestrians.*
- *Stops on the exit side result in the crosswalk being behind the bus, which helps drivers see pedestrians and allows the bus to depart while pedestrians are still crossing the street.*
- *Bus pull-outs reduce the likelihood of queuing behind the bus into the roundabout. A bus pull-out may create sight line challenges for the bus driver to see vehicles approaching from behind as the bus driver attempts to merge into traffic.*

Metro uses in-lane stops because bus pull-outs cause transit delay.

Bus stops cannot be located along the circulatory roadway for the following reasons:

- *Bus stops along the circulatory roadway eliminate the detectable buffer that is required between the circulatory roadway and pedestrian path per proposed PROWAG. Detectable buffers are discussed further in Section 10.4.*
- *Bus stops within the circulatory roadway, either in-lane or in a pull-out, introduce conflicts within the circulatory roadway that cannot be present at a roundabout.*

4.4 Design for Active Transportation Users

Pedestrians, cyclists, and people with other mobility assistive devices should be able to safely navigate a roundabout while minimizing out-of-direction travel. The Public Rights-of-Way Accessibility Guidelines (PROWAG) require active traffic control at multilane roundabout crossings. Planners and designers should use pedestrian and bicycle design checks included in NCHRP 1043.

Metro requests two surrogate safety assessment methods for roundabout projects in King County:

- Design flag assessment: This method for identifying bicycle and pedestrian needs was developed for application during early alternatives evaluation or early levels of concept design. It can also apply to in-service roundabouts. See Chapter 9: Geometric Design Process and Performance Checks, Appendix: Design Performance Check Techniques
- Pedestrian crossing evaluation: Pedestrian crossing surrogate measures can be evaluated at a planning level by measuring crossing distances and evaluating sight distances. See Chapter 9 and the appendix.

"The [approved] Public Rights-of-Way Accessibility Guidelines, as amended for shared-use paths, require pedestrian-activated signals with accessible pedestrian signals at multilane roundabout crossings and multilane channelized turn lanes."

"Common active traffic control devices at roundabout crossings include:

- ***Rectangular rapid-flashing beacons.** As an active warning device, the RRFB rests in dark when not used and flashes for a predetermined time upon activation by the crossing user. These devices can be mounted along the roadside, overhead, or both…*
- ***Pedestrian hybrid beacons.** This device also rests in dark when not used and follows MUTCD guidelines for signal placement." (NCHRP 1043 Section 12.3.3)*

4.5 Vertical Clearance at Raised Pedestrian Crossings and Other Locations

Raised pedestrian crossings are occasionally used in roundabouts and other intersections to encourage slower speeds and prioritize pedestrian safety. These treatments must provide ample clearance for buses to successfully traverse the crossing without damaging the coach.

Use AutoTURN to test bus vertical clearance at raised crossings: Metro uses customized AutoTURN settings to test the clearances on raised crossings. Design constraints for raised crossings including design speed of buses at the location of the crossing, type of buses (see AutoTURN requirements), and a controlling factor of minimum clearance of 4" between the bottom of the bus to any impediment. Buses used in AutoTURN do not account for a bus full of riders, which can weigh down the bus during turns and reduce clearance. As a result, designers should ensure that the minimum clearance is maintained during all turn movements.

"Raised crosswalks or speed humps force drivers to slow down; lower speeds have been linked to increased yielding behavior. A raised crosswalk can also guide pedestrians who are blind or have low vision to stay within the crosswalk if they can detect the crosswalk's side slopes as boundaries. The design of a raised crosswalk is a balance of a steep slope with a modest run (which may result in significant speed reductions) versus a gentler slope (which may have a more modest speed reduction but retain a higher capacity). Crosswalk design will also consider design vehicle maneuverability and needs." (NCHRP 1043 Section 10.4.7)

Figure 4: Example of a raised crosswalk at a multilane roundabout (source: NCHRP 1043, Jonathan French).AutoTurn Vertical Clearance Analysis should show minimum 4" clearance for the Metro bus.

Check vertical clearance at other locations: As part of profile and cross-section development, practitioners need to provide Metro with check locations shown in the following figure for adequate ground clearance.

4.6 Transit Priority Treatments and Operational Performance Analysis for Transit

Transit priority treatments can be difficult to incorporate into a roundabout, although the roundabout itself could be considered a transit improvement if it reduces delay compared to existing or alternative intersection treatments[3].

Queue bypass lanes can be effective approaching roundabouts: Queue bypass lanes are an effective transit priority treatment at high volume roundabouts because they ensure that transit coaches can approach and depart the roundabout unencumbered by other traffic. Queue bypass lanes should be considered for roundabouts on frequent transit routes, such as the planned roundabout with the queue bypass at NE 145th St & 5th Ave N near the 145th S light rail station in Shoreline.

Consider transit signal priority in the rare case of a metered or signalized roundabout: Traffic signals or meters at roundabouts are not common, as roundabouts are usually designed to operate with yield control of entries. However, some situations may require signalization of roundabouts, such as unexpected demand, nearby intersections, at-grade rail crossings, or pedestrian crossings. Transit signal priority or queue jumps should be analyzed in these situations.

Queue length is a key operational performance indicator for transit: Queues at roundabouts tend to move continuously, unlike those at signalized intersections, and they tend to be shorter than stop controlled movements. Metro will request the queue length for bus movements to assess any negative impact on transit movements. The need and length of any queue bypass lane should be based on this queue length.

Applicable *NCHRP 1043: Guide for Roundabouts* Sections

- 8.3.4 Operational Performance: Queue length
- 12.6 Entry Metering Signals

4.7 Curb and Truck Apron Design

Curb and truck apron design plays a large role in determining whether a bus can successfully navigate a roundabout.

[3] Transit without priority treatment at roundabouts does not meet FTA's New Starts grant program criteria for Bus Rapid Transit to "provide faster passenger travel times through congested intersections by using active signal priority in separated guideway, and either queue-jump lanes or active signal priority in nonseparated guideway."

Avoid roundabout designs that require buses to traverse the center island or mount truck aprons: Avoid using roundabouts on bus routes if they can't accommodate buses without traversing the center island or mounting the truck apron. When coaches roll over these features it can jostle passengers out of their seats or cause standing passengers to fall. Metro operators will avoid using a truck apron unless alternatives have been considered and determined to be unfeasible.

Use mountable curbs for roundabout designs with a 6:1 linear curb ratio: If a bus must use a truck apron due to space requirements (i.e., building locations or right-of-way do not allow expanding the roundabout), Metro approves of a 6:1 linear curb. This 6:1 linear curb is illustrated in the NCHRP Report 672 report on roundabout design Exhibit 6-78, Detail d.[4] This design was used on other roundabouts where it was deemed infeasible to widen the roundabout to meet requirements.

Testing and modifications: Coach testing is a valuable way to determine if roundabout designs not conforming to Metro guidance will support transit operations. Metro staff tested buses on WSDOT's pre-2022 typical mountable curb with a rolled curb transition, and concluded it is not preferred as it is an uncomfortable ride for passengers, can potentially damage Metro buses, and may increase bus maintenance. When existing roundabouts do not accommodate buses, Metro has explored and implemented modified curb designs with a 6:1 ratio based on route experience, field observations, and field tests with King County Roads. Metro has not yet tested the updated WDSOT standard design of a 4:1 linear curb.[5]

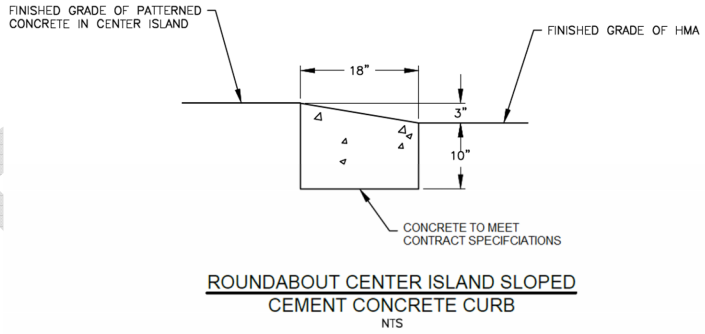

Figure 6: Preferred center island has a 6:1 sloped curb

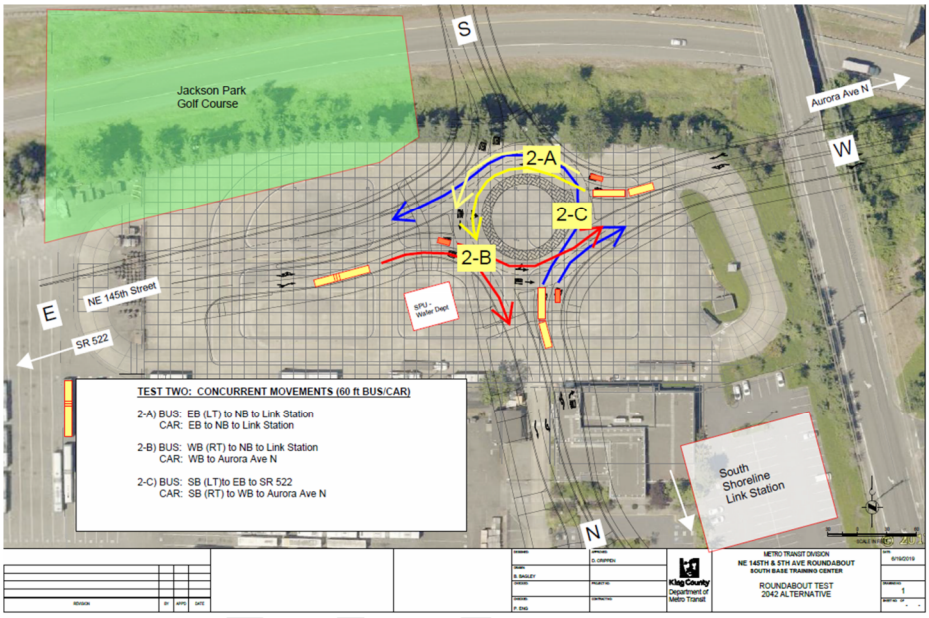
4.8 Coach Testing for Roundabout Design

Building off successful partnerships with Sound Transit and WSDOT, Metro is open to partnering with other agencies and local jurisdictions to run coach testing on roundabout designs when the project can fund the activity. Previous partnerships to refine the curvature of new roundabouts have led to successful designs on N 145th Street, and at the I-405/NE 85th Interchange. Designers and planners

[4] https://nacto.org/docs/usdg/nchrprpt672.pdf

[5] WSDOT updated its truck apron design detail in 2022 from a rolled curb to a straight curb with a 4:1 ratio. Metro has not tested the updated standard. (WSDOT Design Manual & Standard Plan F-10.18-03, updated Mar 28, 2022, https://wsdot.wa.gov/engineering-standards/all-manuals-and-standards/standard-plans).

should discuss this possibility as early as feasible when there are enough details to do the layout and have a constructive conversation. The images below show an aerial view of the King County test facility for the NE 85th Interchange and in-lane BRT station project.



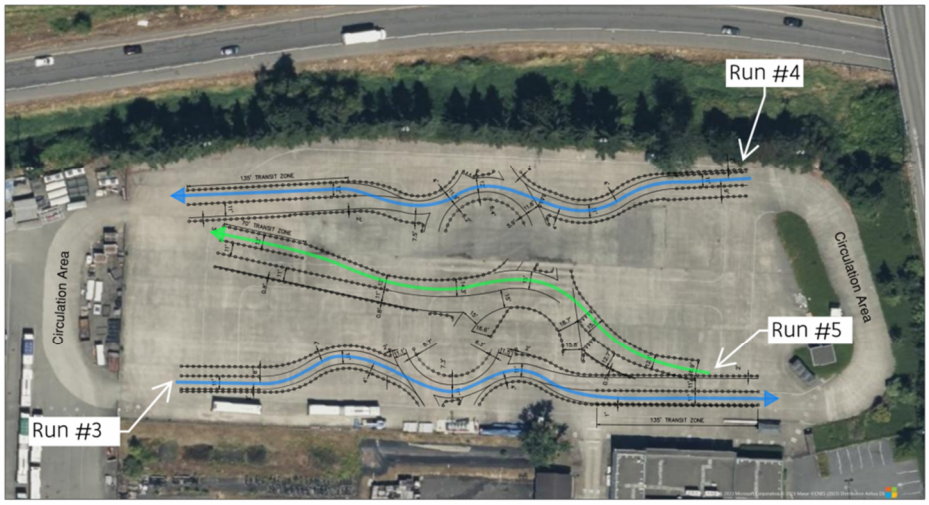


Figure 7: Notes from a coach test of the N 145th Street roundabout design.

DRAFT

40-foot coach navigating the roundabout

Figure 8: Coach testing of the I-405/North 85th Interchange roundabout design.

A.1 Abbreviations, Acronyms and Definitions

BAT lane	Business access and transit lane. Lanes can only be used by transit and general purpose right turns at intersections or driveways.
Bus only lane	Continuous lane restricted to buses only. If right turns are allowed from the lane at intersections, it is considered a BAT lane.
DOT	Department of Transportation
Downstream	The direction to which the transportation flow is moving towards
DWS	detectable warning surface
The Guide	*NCHRP Report 1043: Guide for Roundabouts*
Far-side	The side of an intersection after the bus travels through the intersection
Headway	Interval of time between buses moving in the same direction on the same route
HCM	*Highway Capacity Manual*
ICD	inscribed circle diameter
ICE	intersection control evaluation
In-lane stop	A stop that is in the lane. This removes delay and increases reliability because it removes both the pull-out time and traffic re-entry time.
Near-side	The side of an intersection before the bus crosses
LOS	level of service
LTS	level of traffic stress
MUTCD	*Manual on Uniform Traffic Control Devices for Streets and Highways*
NACTO	National Association of City Transportation Officials
NCHRP	National Cooperative Highway Research Program
PROWAG	Public Right-of-Way Accessibility Guidelines
Pull-out	A designated spot on the side of a road where buses pull out of the flow of traffic to pick up or drop off passengers. Pull-outs increase bus delay due to the cost of time necessary to merge back into flowing traffic.
Queue bypass lane	A short bus-only lane intended for transit vehicles to bypass a point of recurring traffic congestion. Often a treatment, such as a queue jump signal, is needed at the end of the queue bypass lane to help buses re-enter traffic
RRFB	Rectangular rapid-flashing beacon
SPF	Safety performance function
Traverse	To travel across the center island of the roundabout
US Access Board	An independent federal agency devoted to accessibility for people with disabilities
Upstream	The direction from which the bus or transportation flow is coming.

DRAFT

1 Introduction

The Roundabout Guidelines equip planners, engineers, and stakeholders with a clear understanding of important factors when designing a roundabout for King County Metro bus operations. The considerations outlined in this document allow bus operators to consistently navigate a roundabout without damaging their coach or injuring passengers onboard. Guidelines are aimed at preventing on board passengers from being jostled, slipping, falling, or losing possession of belongings, and providing safe and convenient access for passengers at nearby stops.

King County Metro operates transit coaches of differing length and handling characteristics on roadways owned by other agencies, including the state (Washington State Department of Transportation, WSDOT), the county (King County Roads), and 39 towns and cities within the county. It is important for planners, engineers, and stakeholders to consult with Metro staff early during the planning and development of a new roundabout configuration proposal on roadways with existing or future transit service. Consulting these guidelines can help planners, engineers, and stakeholders anticipate Metro's needs prior to discussions with Metro, which can help streamline the coordination process. Please refer to the checklist in Section 2 to obtain Metro's review/approval or concurrence of proposed roundabouts and related improvements.

Principles to consider when designing roundabouts for transit vehicles include:

- Design turning movements assuming buses will not traverse across the inner circle or mount the truck apron. Use caution when designing curbs and truck aprons to be mountable by bus wheels without jostling passengers.
- Coordinate with Metro on multilane roundabouts to determine the appropriate design approach for bus operations.
- Use the proper design vehicle settings for AutoTURN analysis.
- Review the design of raised crosswalks for vertical bus clearance.
- Consider pedestrian comfort and safety as well as bus operations as relates to bus stop placement and pedestrian pathways.
- Consider signalization, signage, and priority access for transit speed, reliability, and safety.

Roundabouts are a proven safety measure that substantially reduces fatal and injury crashes. As roundabouts become more prevalent in the Puget Sound Region, there is a growing need to integrate these transit-specific considerations into the planning and design process.

Because each roundabout is in a unique built environment, each roundabout is also unique. As a result, the document articulates design guidance and allows for flexibility when practical and necessary.

The checklist in Section 2 is designed to serve as a quick reference. Section 3 is focused on definitions and early involvement. Section 4 focuses on the bus as the design vehicle and street design elements.

DRAFT

2 Transit-Friendly Roundabouts Checklist

King County Metro is providing this checklist on roundabout use and transit design considerations to its interagency partners, developers, and consultants. Agencies and jurisdictions planning roundabouts should review current and future bus service and engage King County Metro at plansreview@kingcounty.gov as early as possible or reach out directly to your Metro project contact.

☐ **Coordination with Metro: Planning and Concept Phase**

- ☐ Send details to plansreview@kingcounty.gov.
- ☐ Document bus routes and bus stops on the roadway where the roundabout is planned:
  - King County Transit Route map
  - King County Bus Stop Map – zoom in to see individual stops
  - Metro Connects Maps –click on the Metro Connects tile to view "Metro Connects Interim Network" and "Metro Connects 2050 Network".
- ☐ Document site constraints that may impact transit operations.
- ☐ Describe the planning and design approach as relates to plans for considering transit operations and transit access.
- ☐ Provide the assumed type of roundabout (mini, compact, single lane, or multi-lane).
- ☐ If completing an Intersection Control Evaluation, include King County Metro in the process.
- ☐ Consult with Metro before planning mini-roundabouts and compact roundabouts on transit routes – these designs are particularly challenging in terms of transit operations and include significant transit impacts.

☐ **Multilane Roundabouts: Planning and Concept Phase**

- ☐ Include King County Metro in the performance-based planning and design process in designing for buses to operate in lane or by splitting lanes (See Section 4.2).[1]
- ☐ Provide a sketch-level assessment of in-lane operations and compare to splitting lanes during early design.

☐ **Bus Stops and Pedestrian Access: Planning and Concept Phase**

- ☐ Coordinate with Metro on bus stop location and design.
- ☐ See Section 4.3 for considerations to factor in for near-side or far-side stops at a roundabout.
- ☐ Avoid in-lane near-side stops at multilane roundabouts: Metro prefers in-lane near-side stops in single lane roundabouts but prefers far-side in-lane stops in multilane roundabouts because they help ensure pedestrian sightlines and minimize transit delay.
- ☐ Provide a conceptual proposal for bus stop locations and types with supporting logic.
- ☐ Design pedestrian access to transit for safety, comfort, and convenience (see Section 4.3 for recommendations). Account for increased pedestrian volumes near transit stations and mobility hubs.

☐ **Coordination with Metro: Design Phase**

- ☐ Once available, send details to plansreview@kingcounty.gov.

[1] Splitting lanes is a non-standard movement for Metro operations. Metro prefers designs for buses to stay in lane but recognizes this will increase the size of the roundabout, increase operating speeds, and impact safety. In places with high pedestrian volumes, Metro may favor roundabouts designed for lane splitting due to lower operating speeds.

DRAFT

- ☐ Provide signage and striping plans.
- ☐ Provide paving plans and curbing details.
- ☐ Provide truck apron details.
- ☐ Provide typical sections showing proposed cross slope at entries and in circulating roadway.
- ☐ Provide estimated 100% design date, construction date, completion date, and timeline updates.

☐ **Bus Stops and Pedestrian Access: Design Phase**

- ☐ Work with your point of contact at Metro and the Transit Route Facilities team to determine bus lengths and number of buses to be accommodated at new bus stop locations.
- ☐ Ensure that ample space is provided for boarding at bus door(s) - design stop platform and approaching curves so both doors of the bus align with the curb (see Section 4.3).
- ☐ Ensure that sightlines for pedestrian crossings are not obstructed.
- ☐ If applicable, ensure bus has sufficient clearance at raised crosswalks.
- ☐ Communicate potential construction impacts (like bus stop relocation) for existing bus stops.
- ☐ Where pedestrians are crossing legs of the roundabout to access transit, provide a design check such as in NCHRP 1043 Appendices 5, 6, and 7.

☐ **Design Vehicles, AutoTURN, and swept path diagrams**

- ☐ Provide swept path diagrams that refer to Metro's design vehicle and AutoTURN specifications (see Section 4.1).
- ☐ Use appropriate design vehicle for King County Metro Transit (Section 4.1) - additional details for Metro AutoTURN settings are available in Chapter 3.3 of Metro's Transit Route Facilities Guidelines.
- ☐ Ensure that mirrors and bike racks are included in transit design vehicles.
- ☐ Analyze turning movements with buses maintaining a 5-10 mph speed throughout the roundabout - lower speeds at pedestrian and bicycle crossings are acceptable.
- ☐ Ensure buses can navigate a roundabout without driving on truck aprons or curbs.
- ☐ Provide vertical clearance details of buses at raised crosswalks, truck aprons, and entry/exit points.

☐ **Signage**

- ☐ Include signage such as "Yield to Heavy Vehicles", "Yield to all Lanes", or "Large Vehicles take both lanes."

☐ **Review the following *preferred* design elements**

- ☐ For multilane roundabouts, if designed to stay in lane, use best practices identified in NCHRP 1043 to keep buses from drifting into adjacent lanes.
- ☐ Apply a sloped curb on truck aprons as featured in Section 4.7 (instead of a rolled curb), as buses may occasionally track onto the truck apron despite design accommodations.
- ☐ Consult with Metro before planning mini-roundabouts and compact roundabouts on transit routes – these designs are particularly challenging in terms of transit operations and include significant transit impacts (Section 3.1).

DRAFT

3 Planning, Project Development, and Concept Development

This section provides more details on coordinating with Metro throughout the planning and concept phases.

The details included in this document are meant to serve as guidelines. In circumstances where guidelines cannot be met, Metro staff will work with the jurisdiction to determine collaboratively which features should be modified or eliminated.

Metro expects designers to supplement this transit-specific roundabout guidance with other guidelines and requirements. *NCHRP Research Report 1043: Guide for Roundabouts*, released in June 2023, provides a context-sensitive, performance-based design approach to designing roundabouts. King County Metro's *Transit Route Facilities Guidelines,* most recently updated in 2018, provides details about bus stops, transit coach characteristic, and street design standards. U.S. Access Board's *Public Right-of-Way Accessibility Guidelines (PROWAG)*, Final Rule issued in August 2023, provides requirements for sidewalks and shared use pathways.

3.1 Roundabout Definition and Characteristics

NCHRP 1043 defines a roundabout as "a circular intersection form in which traffic travels counterclockwise (in the United States and other countries that drive on the right-hand side of the road) around a central island and entering traffic must yield to circulating traffic." This document does not apply to traffic calming circles or rotaries. Traffic calming circles, common in King County, have smaller diameters, are distinct from roundabouts, and typically are not suitable for Metro operations. Rotaries, which are distinguished by having large diameters often greater than 300 ft, are not common in Washington.

Table 1 shows different types of roundabouts. All roundabouts on transit corridors should be designed so buses do not need to traverse the center island or mount the truck apron - in general, mini roundabouts should not be used on transit routes, and compact roundabouts may be acceptable if 40-foot buses can stay on the roadway. Larger roundabouts that can accommodate buses, like single-lane and multilane roundabouts, should be designed so buses do not need to mount the truck apron. To minimize safety concerns for bus passengers, roundabouts on transit routes should still be planned with bus-friendly truck apron designs (see section 4.7: Curb and Truck Apron Design) that allow for the occasional situation of bus mounting.

DRAFT

Table 1: Comparison of common roundabout features across types of roundabouts. (adapted from NCHRP 1043)

Roundabout Feature	Mini-Roundabout	Compact Roundabout	Single-lane Roundabout	Multilane Roundabout
Meets bus operations requirements for 40' -60' coaches?	No	Unlikely	Yes, with proper design	Yes, with proper design
Central island	Requires large vehicles to traverse central island, which is not feasible for buses	Requires vehicles longer than 40' to traverse central island	Non-traversable, but typically includes truck apron	Non-traversable, but typically includes truck apron
Common Intercircle Diameter (ICD) range	45 ft to 90 ft	65 ft to 120 ft	90 ft to 180 ft	150 ft to 200 ft
Maximum number of circulating lanes conflicting with each entry	1	1	1	2+

Applicable *NCHRP 1043: Guide for Roundabouts* Sections

- 2.3.1 Roundabout Characteristics and Applications: Roundabout Types
- 2.3.2 Roundabouts with Traversable Elements

3.2 Involve Metro Early

Provide transit-related details to Metro early, including during planning studies and alternatives identification and evaluation. Performance goals and outcomes related to transit can influence a project even before project design begins. As a project evolves from preliminary to final design, it becomes more difficult to appropriately design for buses and achieve Metro's desired outcomes.

If Metro-operated buses are passing through the project area, the design team is expected to engage Metro throughout the design process, including in efforts like Intersection Control Evaluations (ICE) on state roads.

Metro expects project goals and desired outcomes to include safe and reliable transit operations and active transportation access to bus stops. In differentiating between *accommodating* and *designing* for a large vehicle, Metro expects roundabouts on transit routes to be *designed* for transit. The Metro-specific bus should be used as a *design vehicle* that regularly uses the facility rather than an occasional larger vehicle to be *accommodated*. With these transit goals and performance measures in place, Metro is interested in collaborating with jurisdictions throughout the iterative performance-based approach outlined in NCHRP 1043 Chapter 3.

DRAFT

4 Vehicle Characteristics and Street Design

This section includes guidance on transit design elements, both for the bus and people accessing the bus by foot or bike. Design elements should be considered in addition to those required by the design jurisdiction. Metro operates both 40-foot and 60-foot motorcoaches on bus routes in King County. Metro's operators are responsible for maintaining rider safety during every trip.

4.1 The Metro Bus as the Design Vehicle

As described in Section 4.4.4 of NCHRP 1043, transit buses may include fixed chassis and articulated vehicles. They can have a variety of wheelbase lengths as well as different distances between the bumpers and the outermost axles. These factors affect the swept path of the bus and potentially impact areas beyond the curb, such as signs, poles, and other fixed objects. AutoTURN software can verify swept path and vertical clearance for Metro buses.

Use Metro's custom design vehicles in AutoTURN: Metro developed custom AutoTURN settings after finding that the national AASHTO bus design vehicles, the BUS-40 and BUS 45, do not match the specifications of Metro coaches. When designing horizontal and vertical curves, Metro requires using the custom AutoTURN settings with bicycle rack and side mirror clearance outlined in Metro's Transit Facilities Guidelines, Chapter 3.3: AutoTURN. Controlling speed is very important for Metro operations and will need to be emphasized during the design process. Analyze turning movements with buses maintaining a 5-10 mph speed throughout the roundabout. Lower speeds at pedestrian and bicycle crossings are acceptable. Figure 2 shows parameters at the time these guidelines were published.

DRAFT

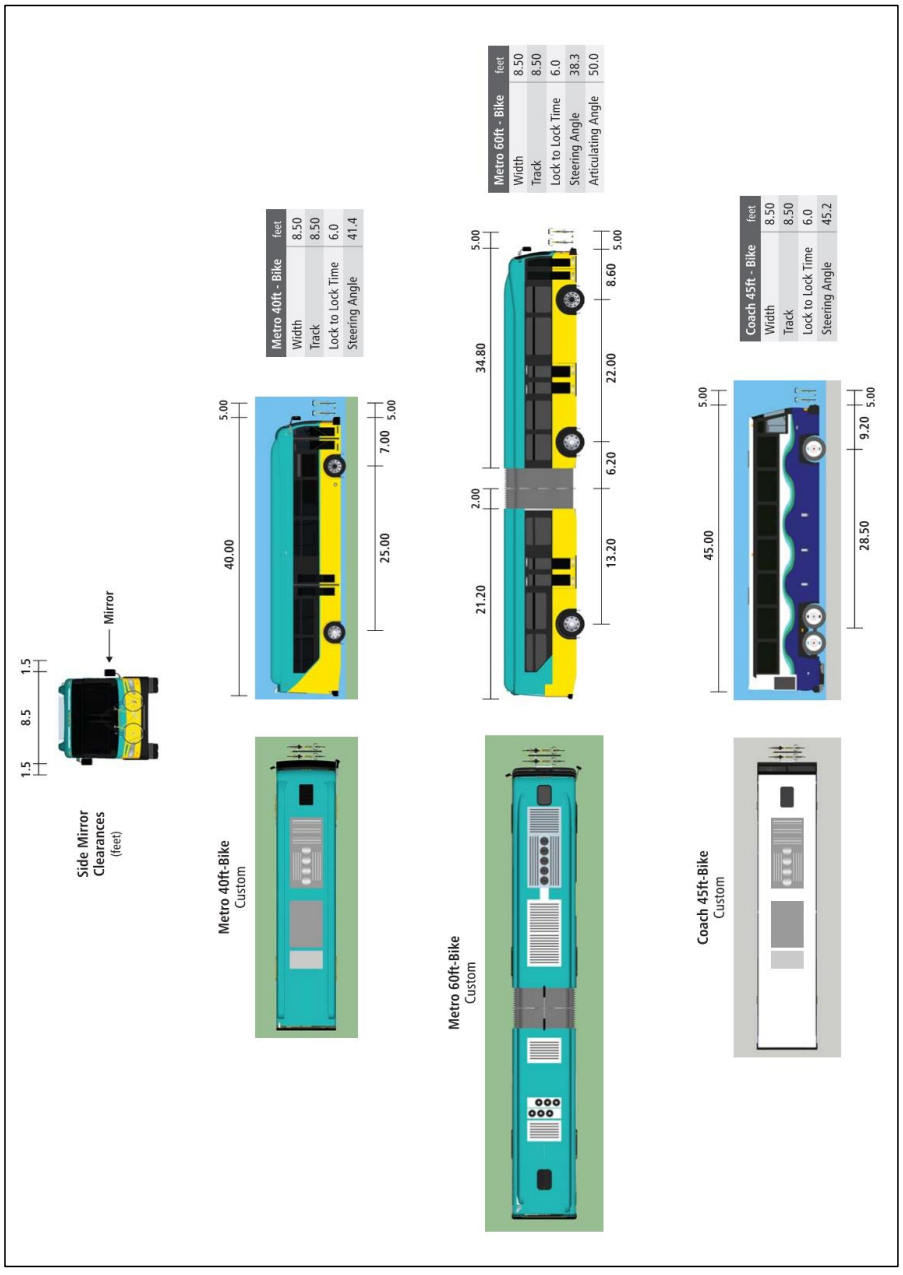

Figure 2: AutoTURN Vehicle Modifications with Deployed Bike Racks

Buses should not need to use truck aprons: Passenger buses need to be accommodated within the circulatory roadway without tracking over the truck apron, which could jostle bus occupants. Note the Metro 60-foot bus travels through a roundabout more easily than the 40-foot bus, although both should be tested in AutoTURN. Metro encourages the use of truck apron designs that will allow for occasional and incidental use by buses without disturbing passengers (see section 4.7: Curb and Truck Apron Design).

- 3.3 AutoTURN
- Appendix B: Metro Bus Design Specifications

4.2 Multilane Roundabouts

For multilane roundabouts, designers should work with Metro during sketch design to decide if buses will operate straddling lane (also known as lane splitting) or staying in lane. The design approach for trucks and buses needs to be established early in project planning and design in coordination with Metro staff, as it can affect the safety performance and operational effects for other users. NCHRP 1043 Section 7.2.4 discusses trade-offs between designs to stay in lane and designs to split lanes for large vehicles.

Transit operators are required to *qualify* on a particular route before they can drive the route themselves. During route qualification, operators receive training on specific characteristics and techniques for driving the route safely and efficiently. When a route includes a roundabout, instructions for navigating the roundabout will be provided as part of the route qualification process, including instructions about whether to stay in lane or split lanes while traversing the roundabout.

Lane width considerations: Metro's Transit Route Facilities Guidance Section 3.2.2 calls for 11 feet minimum lanes to accommodate turning movements for buses and to prevent them from encroaching into the adjacent lane. This minimum width applies to roundabout approaches but does not apply to the circulating area. Instead, NCHRP 1043 Section 4.4 notes that the swept path of the truck or bus may be the critical design dimension. It also notes that, "designing all movements for the largest possible truck can lead to negative safety and operational performance issues for other roundabout users, particularly

people walking and biking. Practitioners need to configure roundabouts to best serve large vehicles without sacrificing the safety performance and comfort levels of other users."

Designing for in-lane roundabouts: Metro prefers to stay in lane as it is consistent with Metro operational guidance and offers the optimal speed and reliability benefits for transit. However, Metro acknowledges that there are safety tradeoffs for in-lane operations when considering all roadway users. In-lane designs for large vehicles like buses typically result in a larger overall roundabout radii and wider lanes, which increases speeds and requires a larger footprint for the roundabout.

In-lane designs that do not accommodate the Metro design vehicle can result in a bus over-tracking into other lanes, which may create conflicts with other roundabout users.

Designing for lane splitting: Splitting or straddling lanes is considered a non-standard movement for Metro operations. In places with high pedestrian volumes or other design constraints, Metro may support roundabouts designed for lane splitting due to lower operating speeds. Instructions for splitting lanes will need to be included in the operator route qualification process and may require additional operator training materials (e.g., diagrams or videos)

DRAFT

NCHRP 1043 guidance for straddling lanes is mixed. Authors advise to design for trucks to straddle lanes in most situations, as research suggests truck drivers do not attempt stay in lane. However, Section 10.5.3 notes that a transit agency may necessitate accommodating buses within their own lane to travel adjacent to a passenger car in places with frequent bus service as shown below.

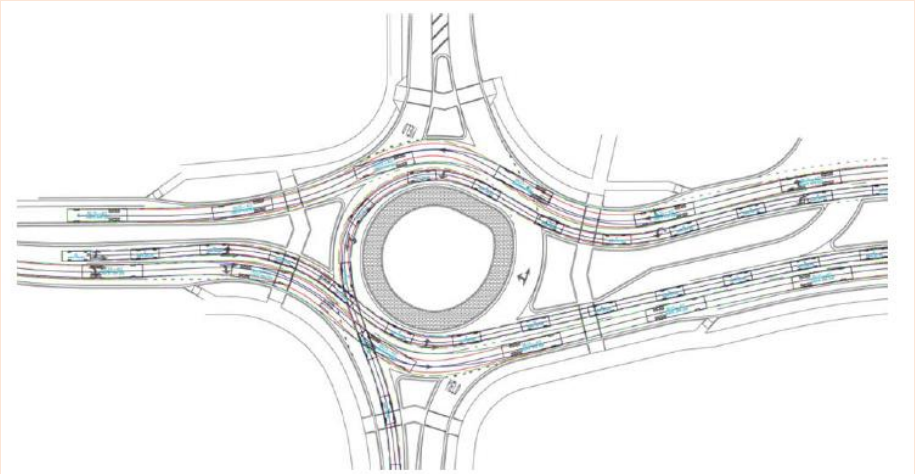

Figure 3: Example of side-by-side navigation for bus travelling straight and passenger car. (Source: NCHRP 1043, Kittelson & Associates)

For straddle-lane design, trucks and buses occupy more than one lane, meaning no vertical lane separation can be included in the entrance, circulating lanes, and exiting. Therefore, one objective for straddle-lane design becomes maintaining lane discipline for passenger cars (i.e. preventing lane drift) by achieving path alignment for passenger cars. Obtaining acceptable view angles is a related second objective. These two objectives require vehicles be staggered at the entrance so vehicles in the outside lane can see in front of the vehicle in the adjacent lane to the left.

Applicable *NCHRP 1043: Guide for Roundabouts* Sections (Multilane Roundabouts)

- 10.7.6 Techniques for Designing for Trucks Staying In-Lane
- 12.2.4 Lane Designations for Multilane Roundabouts

Commented [BL3]: For final production, we will need to set picture background to transparent if we use this format.

4.3 Bus Stops

Bus stop placement may vary for each roundabout project in response to several factors, including the number of lanes, site topography, transit service design, locations of popular pedestrian destinations, and the surrounding pedestrian sidewalk network.

Bus stop placement should optimize safety, accessibility, and transit operations: Jurisdiction partners should reach out to King County Metro early in the planning phase to determine which locations best support the following transit needs:

- Safety – ensure the safety at pedestrian crossings as well as for people entering or exiting the bus. In-lane near-side stops at multilane roundabouts should be avoided because vehicles in the next lane may not see pedestrians. Near-side stops at single-lane roundabouts may reduce the risk of a passenger fall from riders intending to exit at the next stop standing up when the coach is navigating through the roundabout.
- Access – bus stops sited closer to intersections and roundabouts improve accessibility and reduce walking distances. Bus stops should be sited in locations that minimize pedestrian roundabout crossings to access local destinations or to transfer between transit routes, if possible.
- Operations - consider bus stop placement and design that balances safety and bus reliability with minimizing general purpose vehicle traffic spilling back into the roundabout. Metro prefers in-lane stops as described in Metro's Transit Route Facilities (Chapter 3) because they improve transit travel times and reduce delay to transit vehicles. A pull-out may force a bus to wait a long time to re-enter the travel lane where traffic volumes are high.

Given the safety, access, and operations considerations, Metro prefers near-side in-lane stops in single lane roundabouts and far-side in-lane stops in multilane roundabouts. Location context and pedestrian travel patterns will influence final bus stop siting and design.

Bus stop pull-outs: Bus stop pull-outs may be appropriate where near-side stops on multilane roundabouts minimize out-of-direction pedestrian travel. When bus stop pull-outs are required due to stop location impeding sight lines, Metro and partner agencies have used the following criteria (in addition to national guidelines) to design bus stops in pull-outs near roundabouts:[2]

- Design must accommodate bus space based on need. For example, a stop may need to accommodate two 60-foot articulated coaches, each with bike racks deployed.
- For the front coach, the distance from the face of curb on the platform to each of the doors is to be within 6 inches.
- For the second coach, the front door is to be within 6 inches horizontally from the face of curb on the platform. If the back doors of the second coach are more than the desirable 6 inches away from the platform, they are to be at least 18 inches away to allow for a safe space for passengers to step off the coach.

[2] Adopted from WSDOT *I-405, NE 85th Street Interchange and In-lane BRT Station Project's Request for Proposal*, 2.27.5.1.2 Bus Docking, 20210301 V1.

- Coaches are to be fully within the bus pull-out when docking.

DRAFT

Designers can refer to National guidance in NCHRP 1043 Section 10.13 (p 10-95) for further details. It is consistent with Metro's preferences, except Metro has a strong preference for in-lane stops:

To provide the best quality service for bus passengers, bus stops are located as close to pedestrian crossings as possible to minimize out-of-direction travel.

If a bus stop on the entry side of the roundabout (a near-side stop) is chosen, it will be located and designed as follows:

- *On a single-lane approach, the bus stop could be in the travel lane immediately upstream of the pedestrian crossing.*
- *On a multilane approach, a near-side bus stop in the travel lane is to be avoided because vehicles in the lane next to the bus may not see pedestrians and create a multiple-threat condition. [NCHRP 1043 identifies that] a pull-out compatible with the pedestrian and bicycle circulation system is instead used. However, a bus exiting the pull-out may obscure the visibility between pedestrians and oncoming motor vehicles; a bus stop on the exit side may be preferable.*

Because Metro uses in-lane stops, Metro prefers far-side stops on multilane roundabouts.

If a bus stop on the exit side of the roundabout (a far-side stop) is chosen, it will be located and designed as follows:

- *Bus stops are located immediately beyond the pedestrian crossing to improve visibility of pedestrians to other exiting vehicles. Proximity to the crosswalk is preferable to minimize out-of-direction travel for pedestrians.*
- *Stops on the exit side result in the crosswalk being behind the bus, which helps drivers see pedestrians and allows the bus to depart while pedestrians are still crossing the street.*
- *Bus pull-outs reduce the likelihood of queuing behind the bus into the roundabout. A bus pull-out may create sight line challenges for the bus driver to see vehicles approaching from behind as the bus driver attempts to merge into traffic.*

Metro uses in-lane stops because bus pull-outs cause transit delay.

Bus stops cannot be located along the circulatory roadway for the following reasons:

- *Bus stops along the circulatory roadway eliminate the detectable buffer that is required between the circulatory roadway and pedestrian path per proposed PROWAG. Detectable buffers are discussed further in Section 10.4.*
- *Bus stops within the circulatory roadway, either in-lane or in a pull-out, introduce conflicts within the circulatory roadway that cannot be present at a roundabout.*

4.4 Design for Active Transportation Users

Pedestrians, cyclists, and people with other mobility assistive devices should be able to safely navigate a roundabout while minimizing out-of-direction travel. The Public Rights-of-Way Accessibility Guidelines (PROWAG) require active traffic control at multilane roundabout crossings. Planners and designers should use pedestrian and bicycle design checks included in NCHRP 1043.

Metro requests two surrogate safety assessment methods for roundabout projects in King County:

- Design flag assessment: This method for identifying bicycle and pedestrian needs was developed for application during early alternatives evaluation or early levels of concept design. It can also apply to in-service roundabouts. See Chapter 9: Geometric Design Process and Performance Checks, Appendix: Design Performance Check Techniques
- Pedestrian crossing evaluation: Pedestrian crossing surrogate measures can be evaluated at a planning level by measuring crossing distances and evaluating sight distances. See Chapter 9 and the appendix.

"The [approved] Public Rights-of-Way Accessibility Guidelines, as amended for shared-use paths, require pedestrian-activated signals with accessible pedestrian signals at multilane roundabout crossings and multilane channelized turn lanes."

"Common active traffic control devices at roundabout crossings include:

- ***Rectangular rapid-flashing beacons.*** *As an active warning device, the RRFB rests in dark when not used and flashes for a predetermined time upon activation by the crossing user. These devices can be mounted along the roadside, overhead, or both…*
- ***Pedestrian hybrid beacons.*** *This device also rests in dark when not used and follows MUTCD guidelines for signal placement." (NCHRP 1043 Section 12.3.3)*

4.5 Vertical Clearance at Raised Pedestrian Crossings and Other Locations

Raised pedestrian crossings are occasionally used in roundabouts and other intersections to encourage slower speeds and prioritize pedestrian safety. These treatments must provide ample clearance for buses to successfully traverse the crossing without damaging the coach.

Use AutoTURN to test bus vertical clearance at raised crossings: Metro uses customized AutoTURN settings to test the clearances on raised crossings. Design constraints for raised crossings including design speed of buses at the location of the crossing, type of buses (see AutoTURN requirements), and a controlling factor of minimum clearance of 4" between the bottom of the bus to any impediment. Buses used in AutoTURN do not account for a bus full of riders, which can weigh down the bus during turns and reduce clearance. As a result, designers should ensure that the minimum clearance is maintained during all turn movements.

"Raised crosswalks or speed humps force drivers to slow down; lower speeds have been linked to increased yielding behavior. A raised crosswalk can also guide pedestrians who are blind or have low vision to stay within the crosswalk if they can detect the crosswalk's side slopes as boundaries. The design of a raised crosswalk is a balance of a steep slope with a modest run (which may result in significant speed reductions) versus a gentler slope (which may have a more modest speed reduction but retain a higher capacity). Crosswalk design will also consider design vehicle maneuverability and needs." (NCHRP 1043 Section 10.4.7)

Figure 4: Example of a raised crosswalk at a multilane roundabout (source: NCHRP 1043, Jonathan French).AutoTurn Vertical Clearance Analysis should show minimum 4" clearance for the Metro bus.

Check vertical clearance at other locations: As part of profile and cross-section development, practitioners need to provide Metro with check locations shown in the following figure for adequate ground clearance.

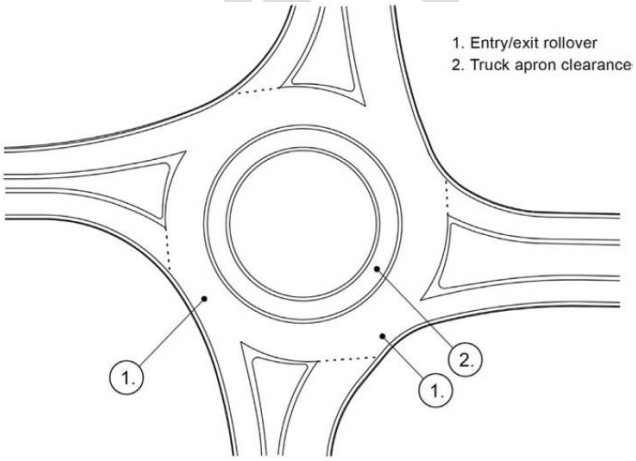

Figure 5: Typical ground clearance concern locations. (Source: NCHRP 1043, Adapted from Wisconsin Department of Transportation.)

4.6 Transit Priority Treatments and Operational Performance Analysis for Transit

Transit priority treatments can be difficult to incorporate into a roundabout, although the roundabout itself could be considered a transit improvement if it reduces delay compared to existing or alternative intersection treatments[3].

Queue bypass lanes can be effective approaching roundabouts: Queue bypass lanes are an effective transit priority treatment at high volume roundabouts because they ensure that transit coaches can approach and depart the roundabout unencumbered by other traffic. Queue bypass lanes should be considered for roundabouts on frequent transit routes, such as the planned roundabout with the queue bypass at NE 145th St & 5th Ave N near the 145th S light rail station in Shoreline.

Consider transit signal priority in the rare case of a metered or signalized roundabout: Traffic signals or meters at roundabouts are not common, as roundabouts are usually designed to operate with yield control of entries. However, some situations may require signalization of roundabouts, such as unexpected demand, nearby intersections, at-grade rail crossings, or pedestrian crossings. Transit signal priority or queue jumps should be analyzed in these situations.

Queue length is a key operational performance indicator for transit: Queues at roundabouts tend to move continuously, unlike those at signalized intersections, and they tend to be shorter than stop controlled movements. Metro will request the queue length for bus movements to assess any negative impact on transit movements. The need and length of any queue bypass lane should be based on this queue length.

Applicable *NCHRP 1043: Guide for Roundabouts* Sections

- 8.3.4 Operational Performance: Queue length
- 12.6 Entry Metering Signals

4.7 Curb and Truck Apron Design

Curb and truck apron design plays a large role in determining whether a bus can successfully navigate a roundabout.

[3] Transit without priority treatment at roundabouts does not meet FTA's New Starts grant program criteria for Bus Rapid Transit to "provide faster passenger travel times through congested intersections by using active signal priority in separated guideway, and either queue-jump lanes or active signal priority in nonseparated guideway."

Avoid roundabout designs that require buses to traverse the center island or mount truck aprons: Avoid using roundabouts on bus routes if they can't accommodate buses without traversing the center island or mounting the truck apron. When coaches roll over these features it can jostle passengers out of their seats or cause standing passengers to fall. Metro operators will avoid using a truck apron unless alternatives have been considered and determined to be unfeasible.

Use mountable curbs for roundabout designs with a 6:1 linear curb ratio: If a bus must use a truck apron due to space requirements (i.e., building locations or right-of-way do not allow expanding the roundabout), Metro approves of a 6:1 linear curb. This 6:1 linear curb is illustrated in the NCHRP Report 672 report on roundabout design Exhibit 6-78, Detail d.[4] This design was used on other roundabouts where it was deemed infeasible to widen the roundabout to meet requirements.

Testing and modifications: Coach testing is a valuable way to determine if roundabout designs not conforming to Metro guidance will support transit operations. Metro staff tested buses on WSDOT's pre-2022 typical mountable curb with a rolled curb transition, and concluded it is not preferred as it is an uncomfortable ride for passengers, can potentially damage Metro buses, and may increase bus maintenance. When existing roundabouts do not accommodate buses, Metro has explored and implemented modified curb designs with a 6:1 ratio based on route experience, field observations, and field tests with King County Roads. Metro has not yet tested the updated WDSOT standard design of a 4:1 linear curb.[5]

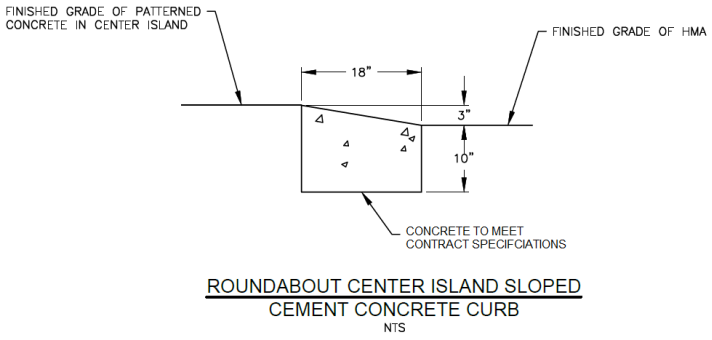

Figure 6: Preferred center island has a 6:1 sloped curb

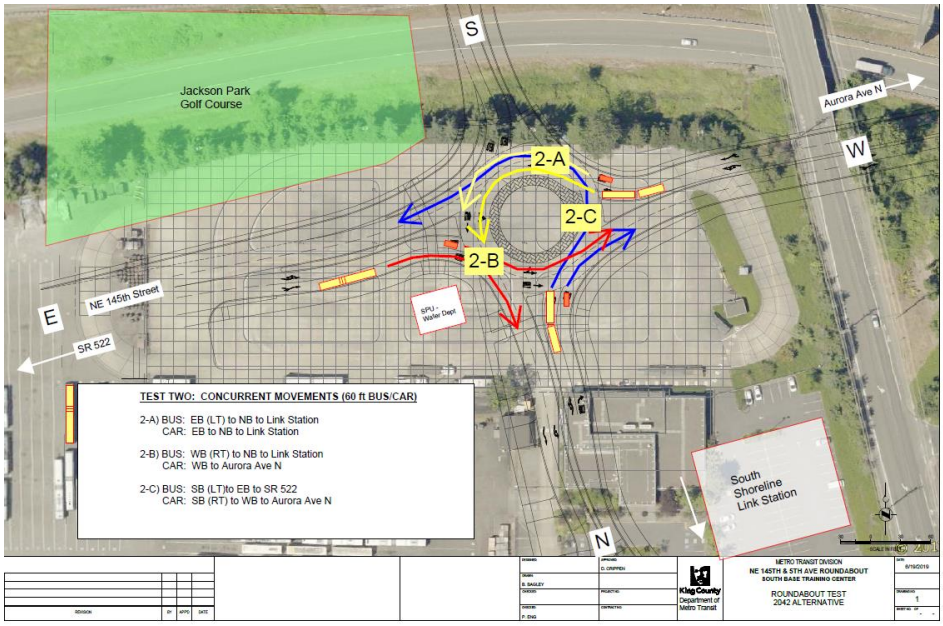
4.8 Coach Testing for Roundabout Design

Building off successful partnerships with Sound Transit and WSDOT, Metro is open to partnering with other agencies and local jurisdictions to run coach testing on roundabout designs when the project can fund the activity. Previous partnerships to refine the curvature of new roundabouts have led to successful designs on N 145th Street, and at the I-405/NE 85th Interchange. Designers and planners

[4] https://nacto.org/docs/usdg/nchrprpt672.pdf

[5] WSDOT updated its truck apron design detail in 2022 from a rolled curb to a straight curb with a 4:1 ratio. Metro has not tested the updated standard. (WSDOT Design Manual & Standard Plan F-10.18-03, updated Mar 28, 2022, https://wsdot.wa.gov/engineering-standards/all-manuals-and-standards/standard-plans).

should discuss this possibility as early as feasible when there are enough details to do the layout and have a constructive conversation. The images below show an aerial view of the King County test facility for the NE 85th Interchange and in-lane BRT station project.



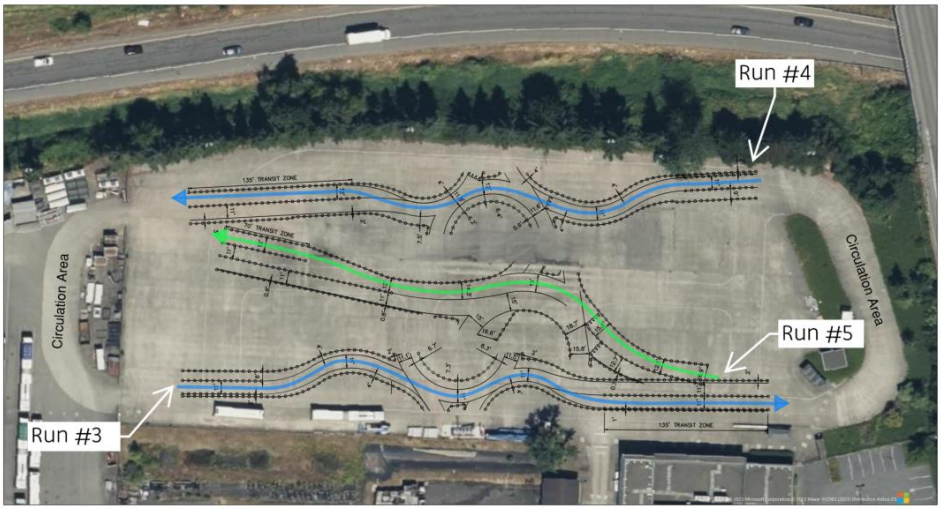


Figure 7: Notes from a coach test of the N 145th Street roundabout design.

DRAFT

A.1 Abbreviations, Acronyms and Definitions

BAT lane	Business access and transit lane. Lanes can only be used by transit and general purpose right turns at intersections or driveways.
Bus only lane	Continuous lane restricted to buses only. If right turns are allowed from the lane at intersections, it is considered a BAT lane.
DOT	Department of Transportation
Downstream	The direction to which the transportation flow is moving towards
DWS	detectable warning surface
The Guide	*NCHRP Report 1043: Guide for Roundabouts*
Far-side	The side of an intersection after the bus travels through the intersection
Headway	Interval of time between buses moving in the same direction on the same route
HCM	*Highway Capacity Manual*
ICD	inscribed circle diameter
ICE	intersection control evaluation
In-lane stop	A stop that is in the lane. This removes delay and increases reliability because it removes both the pull-out time and traffic re-entry time.
Near-side	The side of an intersection before the bus crosses
LOS	level of service
LTS	level of traffic stress
MUTCD	*Manual on Uniform Traffic Control Devices for Streets and Highways*
NACTO	National Association of City Transportation Officials
NCHRP	National Cooperative Highway Research Program
PROWAG	Public Right-of-Way Accessibility Guidelines
Pull-out	A designated spot on the side of a road where buses pull out of the flow of traffic to pick up or drop off passengers. Pull-outs increase bus delay due to the cost of time necessary to merge back into flowing traffic.
Queue bypass lane	A short bus-only lane intended for transit vehicles to bypass a point of recurring traffic congestion. Often a treatment, such as a queue jump signal, is needed at the end of the queue bypass lane to help buses re-enter traffic
RRFB	Rectangular rapid-flashing beacon
SPF	Safety performance function
Traverse	To travel across the center island of the roundabout
US Access Board	An independent federal agency devoted to accessibility for people with disabilities
Upstream	The direction from which the bus or transportation flow is coming.

To: Amy Hess
Subject: RE: [EXTERNAL] RE: [External!] TIA for Lakewood Heights

Amy,
Looks like my Traffic Engineer is smarter than me, his comment was that we could use the approved ICE if the Developer proposes a roundabout but they want a new TIA to evaluate the proposed LOS for the approved one-lane roundabout. If the one-lane roundabout fails, the TIA should propose suitable improvements to the roundabout like right turn lanes.

Thank you,
Dawn M. Anderson

MEMORANDUM

To: Amy Hess, Senior Planner

From: Shane Whitney, Civil Plan Reviewer

RE: Lakewood Heights PRD, File# PA24-008
182 Lot Subdivision
Parcel #'s 31051900400900 & 31051900401100

Date: 4/26/2024

The following comments are offered after review of the above referenced application.

1. **Existing utilities**:
    a. Sanitary sewer: Sanitary sewer has yet to be extended to the property, but it is getting close to 172nd Street.
    b. Water: There currently is a 12" cast iron water main running along 172nd ST NE and can be found on record drawing W775.
    c. Storm: Storm currently runs along 172nd ST NE and can be found on record drawing RD282.

2. Per MMC 14.03.250, utilities are to be extended along the street frontages of the proposed project.
    a. Sewer will need to be extended along the projects frontage and within the new City roads. The sewer will need to route up 172nd street and enter into the site via Road C. Sewer will also need to be made available to the homes at 1205, 1215 and 1227 172nd Street.
    b. Water main installation will be required within the plat.
    c. Storm drainage will need to be provided for the widened sections of existing City roads as well as the new plat roads.

3. **Frontage Improvements:** Frontage improvements are required per MMC 12.02A.090 on all projects. Frontage improvements are described as curbs, gutters, and sidewalks; underground storm drainage facilities; patching the street from its preexisting edge to the new curb line; and overlayment of the existing public street to its centerline.
    a. The Traffic Engineer shall provide the guidance of what will need to be constructed along 172nd Street.

b. 11th Ave NE is considered a local access street, half street improvements shall be compliant with SP 3-202-002 of the EDDS. If the depth of existing roadway section is lacking the City standard for depth of materials, full depth replacement of asphalt will be required. At a minimum, a 2 inch grind and overlay to the center of the right-of-way will be necessary.

4. **Dedication Requirements:**
    a. For 172nd Street approximately a 12.5 foot dedication will be necessary, depending on possible citing of the future roundabout, that could dictate what the ultimate dedication might be.
    b. It does not appear dedication is necessary along 11th Ave. Through the design process should that change, the applicant will dedicate that area necessary.

5. **Access**:
    a. The new roads to be constructed shall be compliant with SP 3-218-001 of the EDDS.
    b. Tract 967 should be a public street, entire road section will need to have a 5 foot planter followed by a 5 foot sidewalk.
    c. The minimum width of a residential driveway is 12-feet and the maximum is 26-feet. Curb cuts shall be limited to a 20 foot maximum.
    d. The west end of Road B appears to have the proper amount of separation from 172nd Street, but without a conceptual location of the roundabout, I do not know if the separation requirement is being met.
    e. Please provide a conceptual drawing with a probable placement of the future roundabout at the intersection of 11th Ave and 172nd Street.
    f. Auto courts are permitted in a PRD. The auto court is to be built per the private road profile, SP3-202-004, with decorative concrete or stamped asphalt. They shall serve 6 lots maximum. In looking at Tract 969, I'm not sure this as configured meets the intent of an autocourt.

6. **Drainage:** All projects in the city of Marysville must comply with requirements stipulated under the MMC 14.15.040 and 14.15.050.
    a. Stormwater drainage: The city has adopted the 201 Ecology Manual. The project must be compliant with minimum requirements 1 – 9. The following considerations will be necessary in subsequent reports:
        - With the interflow that will happen onsite, will these gravel trenches truly function as planned? With the size and shape of them, we should be looking at having the underdrains constructed with a manifold design at a minimum.
        - The use of these gravel trenches for storage of stormwater on this type of scale seems like a problematic design combined with the likelihood of interflow mentioned in the geotechnical report. With wanting to use these areas also as recreational space above the systems, a vault system may very well work as a better use.

- The report states that MR 8 is not applicable, Tract 988 does discharge towards a wetland. It must be noted how compliance is achieved for wetland protection.
- The supplied basin map is not specifically calling it out and the plans show that everything on 11th Ave is being bypassed. Justification must be provided that this area can be bypassed.
- At time of civil plan submittal, a conveyance analysis will be necessary.

b. A geotechnical report has been submitted.
c. The maximum allowed impervious surface coverage for a PRD is 70%.

Other Comments:

7. Survey control datum NAVD-88 and NAD-83 are required to be used. Civil construction plans will not be accepted in any other datum.

8. Trench restoration is to be completed in accordance with section 3-703 of the EDDS. A full lane or full street overlay may be required.

9. The onsite grading and placement of any retaining walls must be compliant with section 22D.050.030 of the MMC. It appears there is quite a bit of grading happening onsite, is there an opportunity to lessen some of the grading to work more with existing elevations? Direction from City council has asked to reduce retaining walls against adjacent residential properties. Please take another look at the potential to revise the onsite grading.

10. A right of way use permit for all work proposed within City right of way is required. Cost for the ROW permit is $648.00, fees to be paid prior to issuance.

11. The applicant is responsible for identifying any existing well or septic systems on site or on adjacent properties. If there are any existing septic systems on site they need to be decommissioned based on the Snohomish Health District standards. If there are any wells on site they need to be decommissioned based on Department of Ecology standards.

12. Engineering construction plan review fees will be due prior to release of approved civil construction plans.
    Engineering construction plan review per MMC 22G.030.020:
    $976 plus a $2000 deposit are due for submittal of the grading permit.
    Review fee of $130 per hour will be charged against the deposit.

13. Engineering construction inspection fees will be due prior to project final or building final whichever comes first.
    Engineering construction inspection fees per MMC 22G.030.020:
    Inspection is charged at $130 per hour with a $2500 deposit required.

1. **All civil construction plan submittals are to be routed directly to msvlpermits@marysvillewa.gov.** The first *civil construction* plan submittal is to consist of a completed grading permit application, a plan set, a copy of the drainage report and a

copy of the geotechnical report. **Once the documents are ready to be submitted, a permit tech at the email address above will provide you a link to where the materials can be uploaded to.**

a. Review timing:
    i. First review = 5 weeks
    ii. Second review = 3 weeks
    iii. Third review = 3 week
    iv. Subsequent reviews will be 3 weeks.

2. Please be advised these comments are in reference to specific items and do not imply a full review of the proposed application. Additional comments which may change the design requirements will be provided during the civil construction plan review process.

If you have additional questions regarding the above comments, please contact me at swhitney@marysvillewa.gov or at (360) 363-8227.

cc: Ken McIntyre, PE, Assistant City Engineer

MARYSVILLE FIRE DISTRICT
REGIONAL FIRE AUTHORITY
Fire Marshal's Office
1635 Grove St. Marysville, WA 98270 - (360) 363-8500
MFInspectors@MFDRFA.org - www.marysvillefiredistrict.org

To: Amy Hess, Senior Planner
From: Brian Merkley, Deputy Fire Marshal
Date: April 23, 2024
Subject: PA24-008 ~ Lakewood Heights PRD ~ 1125 & 1507 172nd Street NE

I have completed a review of the revised plans for this project proposing development of a 182 SFR residential development on 29.48 acres. Please see below for comments and requirements.

1. **GENERAL INFORMATION:**
   a. The project shall comply with current fire code requirements (2021 IFC) including WA State and local City of Marysville amendments to the fire code, city design standards, and all applicable NFPA standards, including IFC Chapter 33 and NFPA 241 construction codes.
   b. Fire marshal approval of fire access and fire hydrant/water supply systems is required as part of the civil construction plan review and approval process.

2. **WATER RELATED:**
   a. At a minimum, the following lots will require fire sprinklers due to distance from ROW: 12-13, 42-45, 69-70, 90-91, 103-104, 165-166, 174-177, and 180. Remaining lots may require fire sprinklers depending on building height and/or available fire flow. *More information needed for determination.*
   b. It is the developer's responsibility to see that adequate water for fire protection is attainable. The minimum required fire flow is determined using IFC Appendix B, and depends upon building sizes, construction types, and sprinkler systems. Proof of fire flow will be required. *No fire flow information provided at this time*.
   c. Documentation/certification of available water supplies for providing the required fire flows is required for final approval of the water system for this project and prior to building construction. Check with the city Public Works Dept. for water system information.
   d. Provide water main extensions with hydrants along the new roadways and at all road intersections in approved locations, with maximum spacing of 600' apart. *Additional hydrants will need to be added to satisfy spacing requirements. Road B in front of Tract 996 and in front of Lot 59.*
   e. Fire hydrants shall comply with city Water Design Standard 2-060 Hydrants, including 5" Storz fittings, with blue reflective hydrant markers to be provided in the roadways, located four inches off the centerline on the hydrant side of the road.
   f. Fire hydrants with approved water supply must be in service prior to building construction.
   g. Future homes to be constructed may require residential sprinkler installation for a number of reasons, including: if homes are three or more stories tall, if fire flow from hydrants does not meet fire code requirements, if any part of homes is further than

200’ from the public road ROW with no hydrant provided on-site, or to mitigate access deficiencies.

h. Where residential fire sprinklers may be required the developer should install a water service per Standard Plan 2-090-001 Full ¾” x 1” Meter Service. Under this plan a 1” tap is made at the water main and 1” piping is run to the 1” meter setter. If in the end a ¾” water meter will suffice then all that is required is to install two reducer bushings with the ¾” water meter. A single service tap should be used where sprinklers are required, not a double service installation.

3. **ACCESS RELATED**:
   a. Turnaround provision is required for dead-end access in excess of 150 feet long. Turnarounds shall comply with city standard plans. (MMC 9.04.503.2.5). *Access shown on plans appears acceptable.*
   b. “Where the vertical distance between the grade plane and the highest roof surface exceeds 30 feet (9144 mm), approved aerial fire apparatus access roads shall be provided. For purposes of this section, the highest roof surface shall be determined by measurement to the eave of a pitched roof, the intersection of the roof to the exterior wall, or the top of parapet walls, whichever is greater.” (2021 IFC D.105.1). *Building heights are not known at this time.*
   c. Aerial fire apparatus access roads shall have a minimum unobstructed width of 26 feet, exclusive of shoulders, in the immediate vicinity of the building or portion thereof. (2021 IFC D.105.2).
   d. An adequate access route for fire apparatus must be in service prior to any building construction.
   e. Access for firefighting operations along all sides of all buildings is required. A minimum 5’ wide access is required for MF dwellings. All parts of building exteriors should be accessible for firefighting by an approved route around the building, and be within 150 feet of a minimum 20’ wide fire apparatus access.
   f. “**NO PARKING - FIRE LANE**” signs are required on both sides of all roads that are 26 feet wide or less. The signage shall be identified on the approved Civil Plans. (MMC 9.04.101, 2021 IFC Appendix D103.6.1)
   g. The city address committee will determine road names and address numbers for the lots.

Hi Amy,

I have reviewed the traffic mitigation offer and traffic study for this development. Snohomish County agrees with and accepts the traffic mitigation offer of $65,194. The signed form is attached to this email and payment information is included in the "Notes" section at the bottom of page 3 of the PDF. In the future, please have "Part Two" of the offer form filled out by the appropriate City staff member for record purposes.

Thank you for the opportunity to review and accept this offer. Let me know if you have any questions.

Thank you,

Caleb Duhnke | *Engineer II*

Traffic Mitigation Offer to Snohomish County

The applicant completes part one and submits it to the City with a completed county traffic worksheet. The City completes part two and sends it to the County. The County completes part three and sends it back to the City.

Part One to be completed by Applicant

Basic Development Information

Name of City in which development is located Marysville

Name of Proposed Development Gemmer Residential

City Project File Number (if known)

Name of Applicant MJS Investors

Address of Applicant 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

Proportionate Share Calculation: *Choose Option A or B*

☒ Option A: Based on a percentage of the County's adopted impact fee (attach traffic worksheet.)

1. The applicable percentage of the County's fee: 20 %
2. Net New Average Daily Traffic: 1,762 ADT
3. The adopted County impact fee for this development: 185 $/ADT
4. Total Proportionate Share Amount: $ 65,194

☐ Option B: Based on a comprehensive traffic study (attach traffic worksheet and traffic study)

_____ No road improvements are impacted. Hence, proportionate share amount is zero ($0).

_____ The following road improvements are impacted. The calculation of proportionate shares is summarized below.

List by Names/Description the Impacted County Projects (attach other pages if necessary)	County Project ID#	PHTs Impacting Project	Capacity Cost per PHT	Proportionate Share Obligation per Impacted Project
1.				
2.				
3.				
4. Total Proportionate Share Amount (sum of obligations for each impacted project)				$

☒ **Trip Distribution and Assignment if required**

If required, attach AM and PM peak-hour trip distribution and assignment. Attach traffic worksheet showing whether or not it is required and traffic study.

☒ **Mitigation of other impacts if required for developments generating more than 50 Peak-Hour Trips**

Mitigation of Impacts on Level of Service

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

Mitigation of Impacts on Inadequate Road Conditions

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

Mitigation for Impacts on Access or Circulation

☒ No impact or not applicable _____ Mitigation as described in attached traffic study.

☒ **Written Offer**

The Applicant hereby voluntarily agrees to pay the total proportionate share amount shown above for impacts of the proposed development on the capacity of Snohomish County roads and provide mitigation of all other impacts as indicated above and described in attached documents.

BY: _____ Date: 11/15/23

Signature by Authorized Official of Applicant or Authorized Representative

Print Name and Title Rob Risinger

Instructions to Applicant. Submit this Offer, a completed county traffic worksheet, and any other attachments to the City with your initial application or send directly to Contact.pwCMS@snoco.org.

Traffic Mitigation Offer to Snohomish County

The applicant completes part one and submits it to the City with a completed county traffic worksheet. The City completes part two and sends it to the County. The County completes part three and sends it back to the City.

Part One to be completed by Applicant

Basic Development Information

Name of City in which development is located Marysville

Name of Proposed Development Gemmer Residential

City Project File Number (if known)

Name of Applicant MJS Investors

Address of Applicant 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

Proportionate Share Calculation: *Choose Option A or B*

☒ Option A: Based on a percentage of the County's adopted impact fee (attach traffic worksheet.)

1. The applicable percentage of the County's fee: 20 %
2. Net New Average Daily Traffic: 1,762 ADT
3. The adopted County impact fee for this development: 185 $/ADT
4. Total Proportionate Share Amount: $ 65,194

☐ Option B: Based on a comprehensive traffic study (attach traffic worksheet and traffic study)

_____ No road improvements are impacted. Hence, proportionate share amount is zero ($0).

_____ The following road improvements are impacted. The calculation of proportionate shares is summarized below.

List by Names/Description the Impacted County Projects (attach other pages if necessary)	County Project ID#	PHTs Impacting Project	Capacity Cost per PHT	Proportionate Share Obligation per Impacted Project
1.				
2.				
3.				
4. Total Proportionate Share Amount (sum of obligations for each impacted project)				$_____

☒ **Trip Distribution and Assignment if required**

If required, attach AM and PM peak-hour trip distribution and assignment. Attach traffic worksheet showing whether or not it is required and traffic study.

☒ **Mitigation of other impacts if required for developments generating more than 50 Peak-Hour Trips**

Mitigation of Impacts on Level of Service

☒ No impact or not applicable ☐ Mitigation as described in attached traffic study.

Mitigation of Impacts on Inadequate Road Conditions

☒ No impact or not applicable ☐ Mitigation as described in attached traffic study.

Mitigation for Impacts on Access or Circulation

☒ No impact or not applicable ☐ Mitigation as described in attached traffic study.

☒ **Written Offer**

The Applicant hereby voluntarily agrees to pay the total proportionate share amount shown above for impacts of the proposed development on the capacity of Snohomish County roads and provide mitigation of all other impacts as indicated above and described in attached documents.

Snohomish County Mitigation Request to City

Snohomish County has reviewed the traffic study worksheet and mitigation offer submitted by the applicant and has determined as follows:

- ☒ Snohomish County requests that the City impose the mitigation offered above as a condition of approval for the Development. Snohomish County agrees to accept changes in the mitigation payment amount shown above resulting from TDM or lot-yield adjustments approved by the City.
- ☐ Snohomish County requests that the City require additional supplemental information to adequately evaluate the proposed development's impacts.
- ☐ The information requested is shown in the notes below.

By: Caleb Duhnke Date: 4/24/24 Caleb Duhnke, Engineer II - Traffic Ops

Signature by Authorized County Staffer Print Name and Title

Routing Back to City

Instructions to County Send this offer and all attachments to the City Staffer shown in Part Two above.

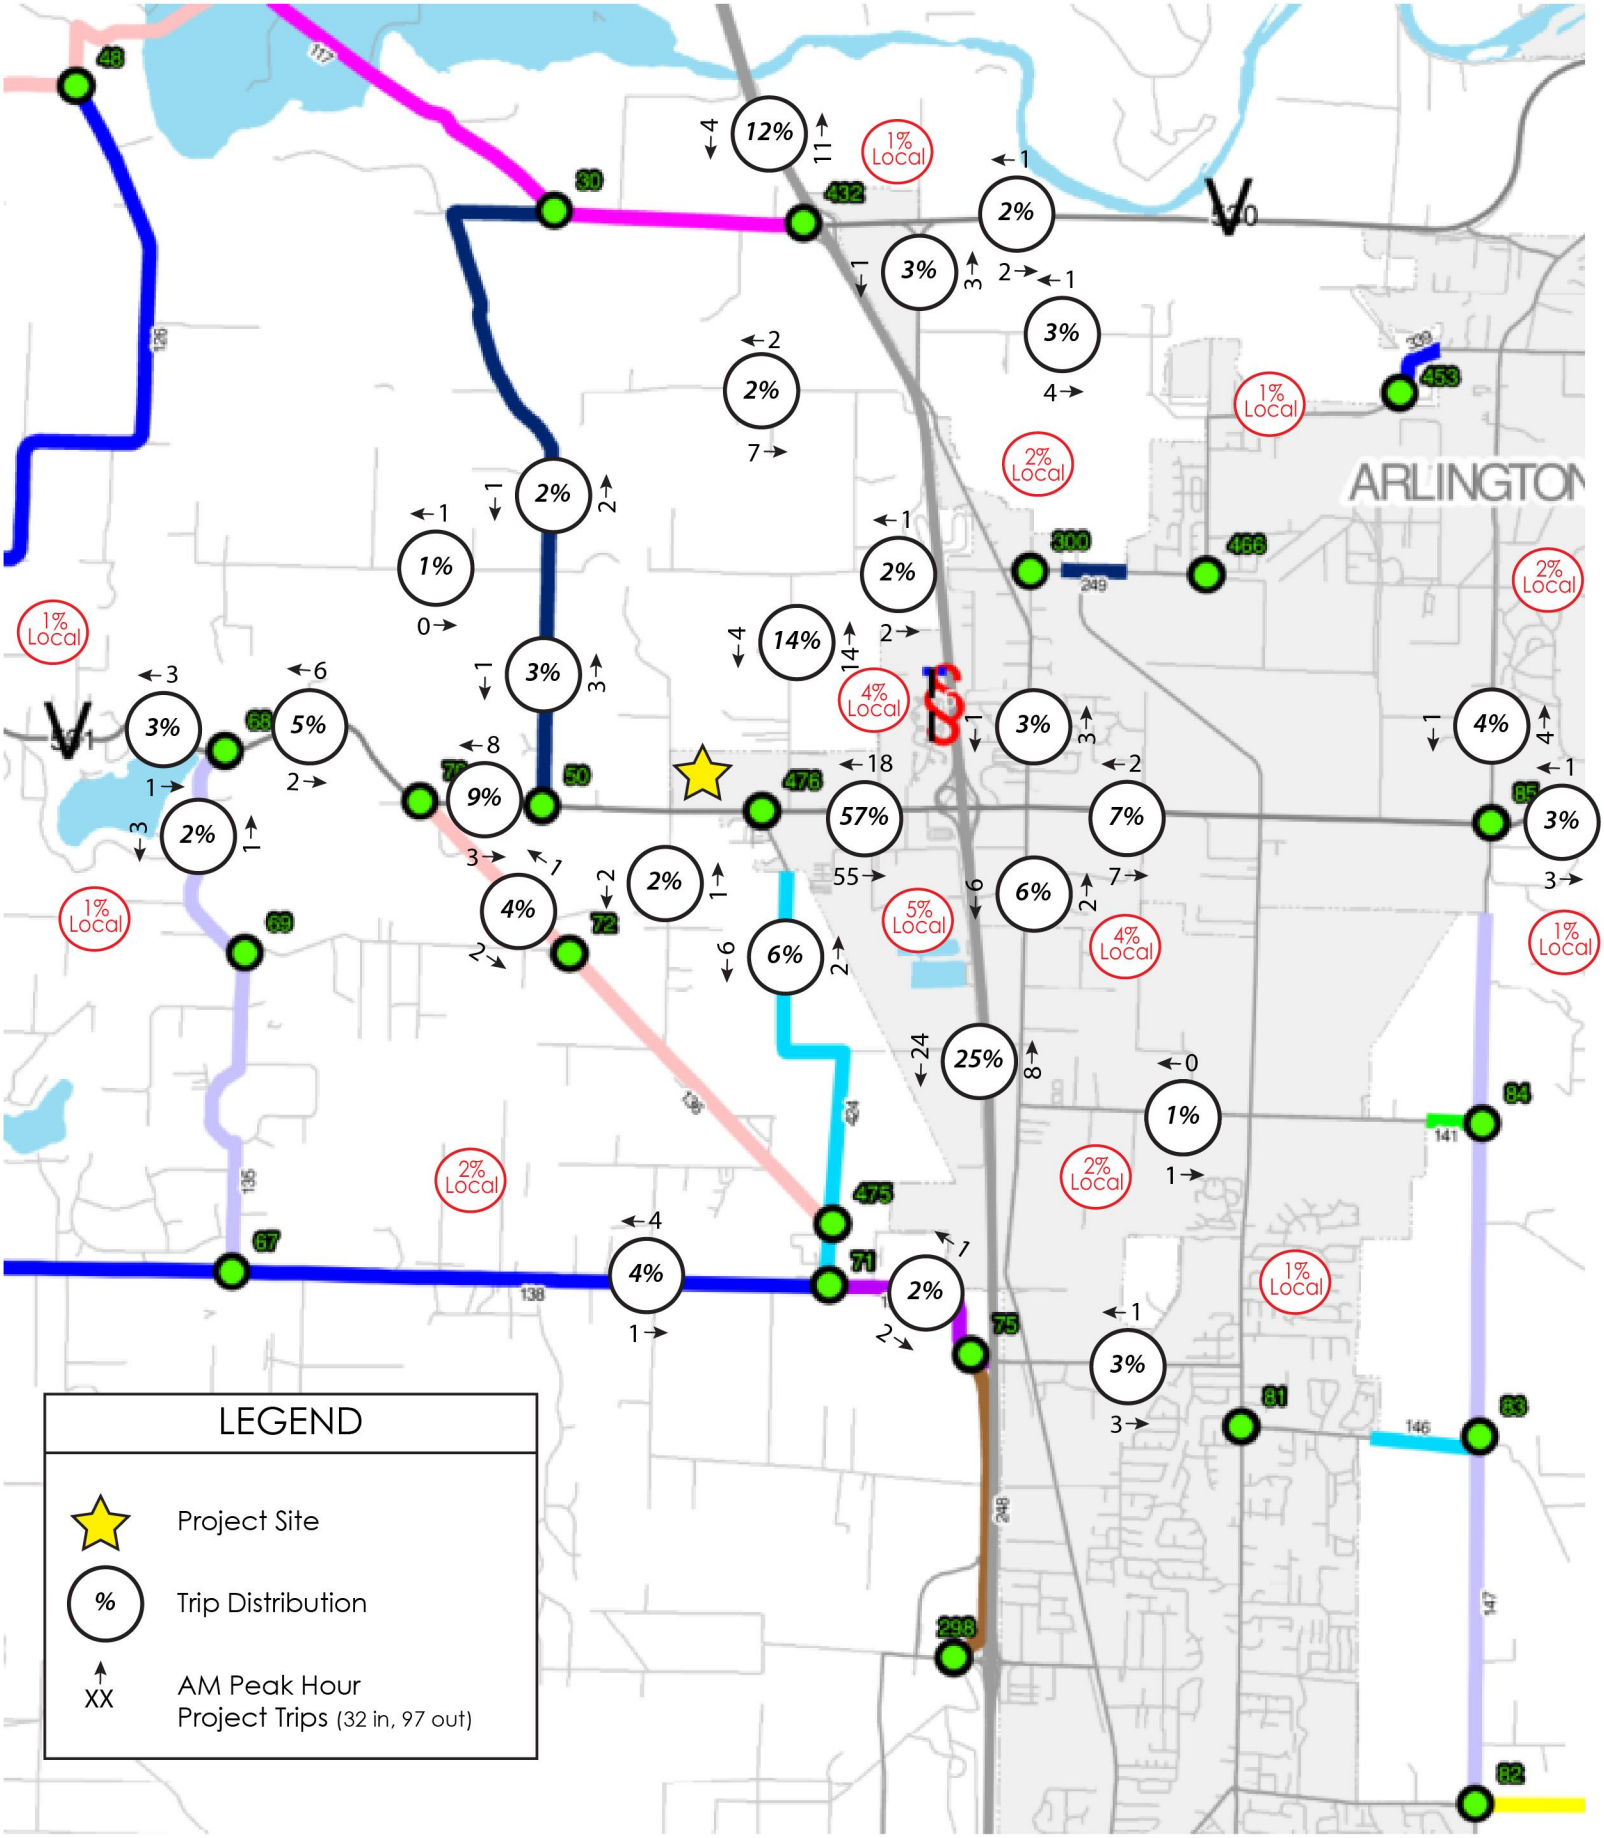
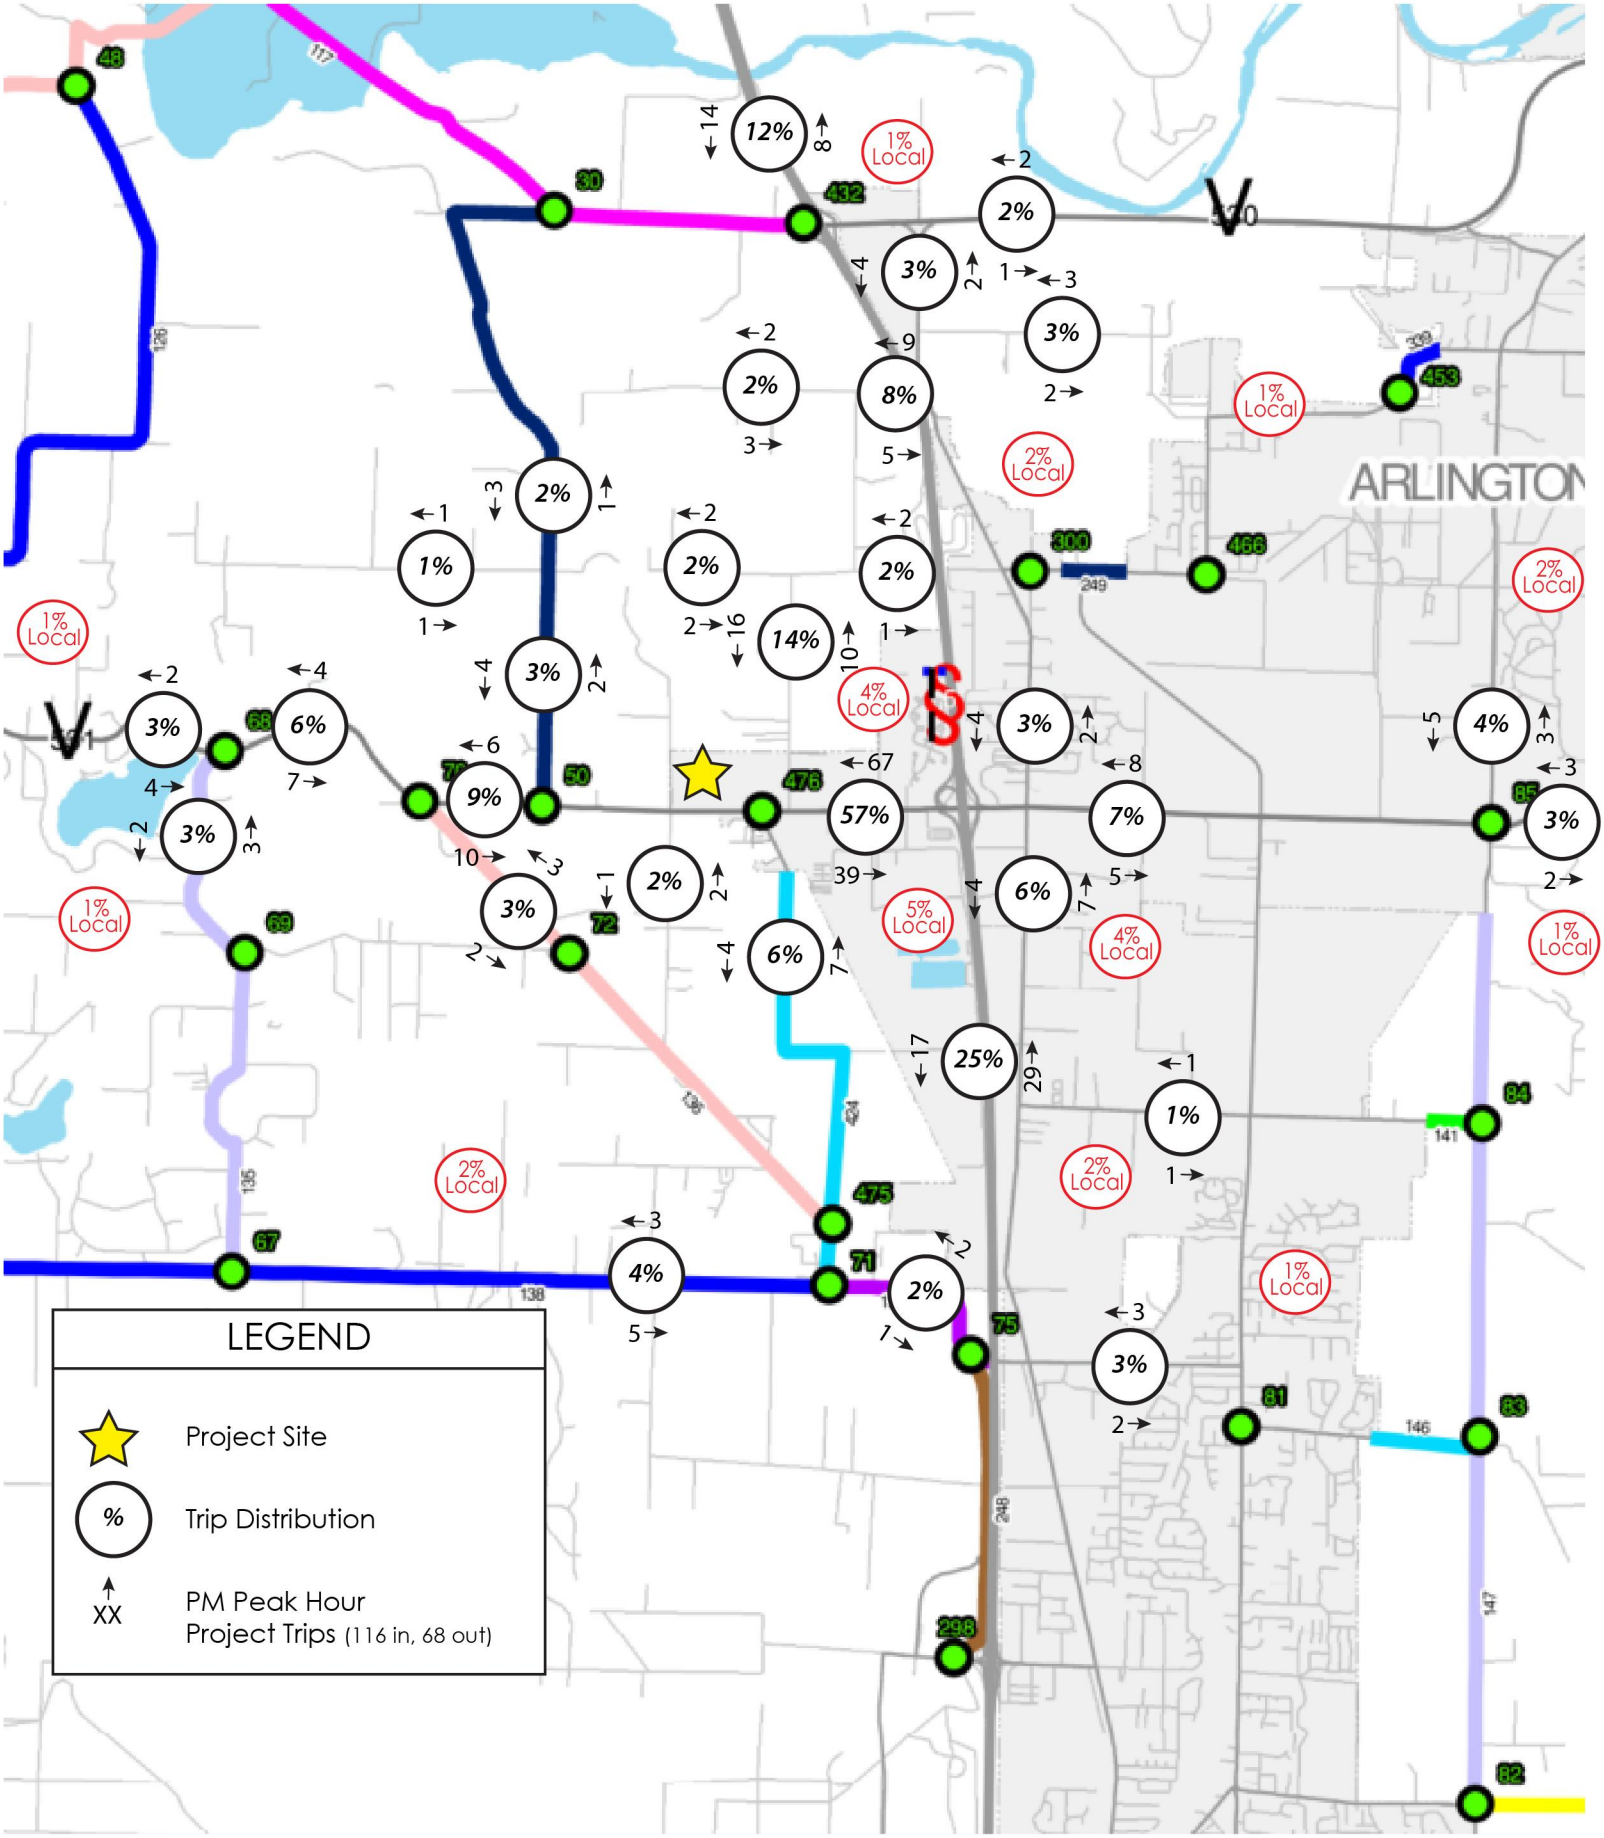
Notes

Payment Information:



Total Mitigation Fees Due: $65,194.00

Transaction Code: 5601



To pay in person by credit card, cash, or check please visit the PDS Cashier located on the 2nd floor of the Administration West Building located at 3000 Rockefeller Ave, Everett, WA or send check by post mail to PDS M/S 604 Attention: Cashier, 3000 Rockefeller Ave, Everett, WA 98201

To pay with credit card* by phone please call the Public Works Customer Service Counter at 425-388-6453.

***American Express is not accepted as a form of payment**

Attachment G1: Weekday AM Peak Hour Project Trip Distribution & Assignment

Attachment G2: Weekday PM Peak Hour Project Trip Distribution & Assignment

Snohomish County Traffic Worksheet and Traffic Study Requirements for Developments in the City of Marysville

Snohomish County government, through an interlocal agreement (ILA) with the City of Marysville, may request traffic mitigation measures from any new development in the city that impacts roads in the unincorporated county. The City will impose the requested mitigation to the extent that the City determines that the mitigation is reasonably related to the impacts of the development. To determine the impacts, and to determine reasonable mitigation measures, the City of Marysville requires a traffic study from any development in the city that may have impacts on county roads. This 'traffic study' may be as simple as completing sections one and two of the county traffic worksheet below, or having a professional traffic engineer conduct a formal traffic study consistent with the requirements in section three below.

- If a development generates less than ten peak-hour trips and the applicant chooses Option A for mitigation payment (standard payment by percent of county impact fee), then the applicant will generally only have to fill out the first two sections of this traffic worksheet and complete a mitigation offer (see section four).
- However, if a development generates more than ten peak-hour trips, or if the applicant chooses Option B for mitigation payment (comprehensive impact analysis), then the applicant will have to fill out the first section of this worksheet, complete a separate traffic study consistent with the requirements in section three, and complete a mitigation offer (see Section Four).
- Applicants should submit all documents *to the City* as part of their initial submittal.
- Traffic study requirements for impacts on county roads are based on the County's traffic mitigation ordinance (Chapter 30.66B) and the city/county ILA. At the end of this document find references to the county contacts and county web site (sources for may of the documents related to traffic mitigation).
- Following review of the documents submitted, the County may request supplemental information and analysis as necessary to determine the impacts of the development in accordance with the city/county ILA. The City will require the proposed development to submit the supplemental information and analysis to the extent that the City determines that it is necessary to determine the impacts of the development.

Section One (1) Worksheet General Information

1. Name of Proposed Development Gemmer Residential

   City Development File Number (if known)_____

2. Name, Address and Phone Number of Applicant_____

   MJS Investors, 11201 SE 8th Street, Suite 116, Bellevue, WA 98004

   Phone #: 425-417-6004

3. Development Site Address 1507 172nd Street NE, Marysville, WA

4. Is it a residential or commercial development? Yes (residential)

5. Description of Development (size and specific type)_____
   The proposed project will include up to 185 Single-Family Detached Homes. The site includes 1 existing Single-Family Detached Home that would be removed with the project.

6. How many new vehicle trips are expected to be generated by the proposed development? (For many common types of developments this information can be provided by the city or the county. For more complex developments trip generation may have to be determined under section three below)

   129 AM Peak Hour 184 PM Peak Hour 1,762 Average Daily Trips (ADT)

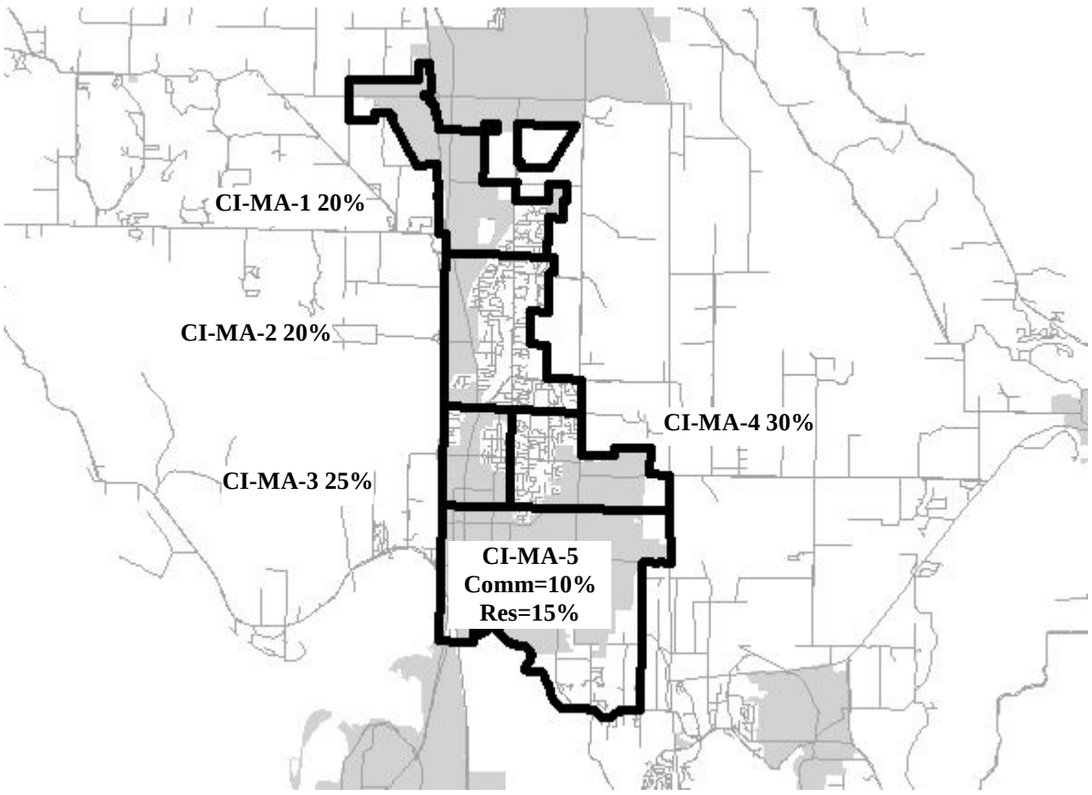
7. Proportionate Share Impact Mitigation: All applicants have two options in determining the amount of their traffic mitigation payment:

   x For determining the amount based on a percentage of the county fee go to section two.

   _____ For determining the amount based on a comprehensive traffic study go to section three.

Section Two (2) Proportionate Share Determined by Percentage of County Impact Fee

2(a) Calculation of Payment Amount



1. Standard default estimated percentage of trips impacting the City streets based on subareas (See below) 20 %

or

2. Other Percentage: (Note: See author's qualifications in section three below.) Estimated percentage of trips impacting county roads from attached trip distribution: _____ %

Sub-Area ID #	* City Subarea Description	Residential Developments	Commercial Developments
CI-MA-1	North of 136th ST SE.	20%	20%
CI-MA-2	North of 100th ST NE and South of 136th ST SE.	20%	20%
CI-MA-3	North of 76th ST NE, South of 100th ST SE, and West of 51st AV NE.	25%	25%
CI-MA-4	North of 76th ST NE, South of 100th ST SE, and East of 51st AV NE.	30%	30%
CI-MA-5	South of 76th ST NE.	15%	10%

* Note: Boundaries are either street centerlines or imaginary extensions of street centerlines in places where the actual streets do not exist.

3. Development New Average Daily Trip Generation (ADT) 1,762

4. Type of Development (Residential or Commercial) Residential

5. County Commercial Fee Rate $_____ 6. County Residential Fee Rate $ 185

(Note: Consistent with county code and the ILA, developments pay the rate in effect at the time of their submittal. As of 07/13/11 the rates were $39 for commercial developments and $46 for residential developments. Through ordinance, the County Council can change these rates at any time, so consult with the County or look at Snohomish County Code 30.66B.330 to find the latest fee rates.)

7. Calculation of Proportionate Share Impact Mitigation

20%	×	1,762	×	185	=	$ 65,194
#1 or #2 above: % of trips		#3 above: ADT		#5 or #6 above: Fee Rate		proportionate share mitigating payment

2(b) Determining whether or not an additional traffic study is necessary

Will the development generate more than 10 peak-hour trips *or* are there other impacts that need to be addressed (e.g., level of service, safety, or access and circulation)

_____ No. Skip section three and go to section four.

__X__ Yes. Read the introduction to section three and skip to section 3(b).

Section Three (3) Traffic Study Requirements

Introduction: This section outlines requirements for traffic studies for impacts on County roads. If an applicant chooses (or is required) to complete a traffic study, then it should be submitted along with this worksheet and a mitigation offer. (Note on Author's Qualifications: A traffic study under this section must be conducted by an engineer licensed to practice in the state of Washington with special training and experience in traffic engineering and, preferably, membership in the institute of transportation engineers. For individuals/firms not on the City's approved list, the developer will provide, with the traffic study, the credentials of the individual or firm performing the traffic study certifying compliance with these qualifications.)

3(a) Proportionate share impact mitigation based on comprehensive traffic study

1. Development's Trip Generation and Distribution. Determine the PM peak-hour trip generation and distribution for the development consistent with Section 3(b) below.
2. Impacted Improvements. Determine which of the road sections with planned improvements in the county's impact fee cost basis (Transportation Needs Report Appendix D) are impacted by three or more development-generated *directional* PM peak hour trips (PM PHT).
3. Current Counts. For each impacted improvement, provide current traffic counts to determine the PM PHT.
4. Reserve Capacity. Determine "reserve capacity" for each impacted improvement by subtracting the current PM PHT from the maximum service volume (MSV) for the existing facility. Reserve capacity is set to zero if current PM PHT exceeds the MSV. For MSVs see County DPW Rule 4224.
5. New Capacity. New capacity is the incremental increase in PHT that could be accommodated with the planned improvement. Determine the new capacity of each impacted improvement by subtracting the current MSV from the future MSV after the improvement.
6. Chargeable Capacity. For each impacted improvement, add the reserve capacity to the new capacity.
7. Final Adjusted Cost. Find the cost of each impacted improvement and make any adjustments used by the County for tax credits (see Transportation Needs Report Appendix D).
8. Capacity Cost per Peak-Hour Trip. For each impacted improvement, determine the capacity cost per PM PHT by dividing the final adjusted improvement cost by the chargeable capacity.
9. Traffic Impacts. From step one above, take the *total* number of PM PHT (in both directions) impacting each planned improvement.
10. Proportionate Share. For each impacted improvement, determine the proportionate share impact mitigation by multiplying the capacity cost per peak-hour trip by the number of PM PHT impacting the improvement.

3(b) Trip Generation and AM and PM Peak Hour Trip Distribution and Assignment

Calculate AM, PM and Daily trip generation consistent with the ITE Trip Generation Handbook and Snohomish County Public Works Rule 4220. Determine the trip distribution and assignments consistent with the County's document titled "Format for Trip Distributions"(available at County web site, see below).

- Within the developments transportation service area (TSA) the distributions will be carried out to each key intersection at which the approach or departure volumes on any leg have three (3) or more peak hour trips. Get the most current list of key intersections on the web site described below. Trips should be distributed onto the road system as it is expected to be in six years.
- The distribution should be a schematic map showing the broad distributions of trips in terms of percentages on different roads. Show all City boundaries.
- The assignment should be a schematic map with the impacted key intersections identified by ID# and turning movements for each shown in separate diagrams on the same page or on different pages. The assignment should also be presented in tabular form listing each intersection by intersection ID#, and the number of trips at each movement.

3(c) Additional Analysis for Developments Generating More Than Fifty (50) Peak Hour Trips

For large developments (i.e., those generating more than 50 peak-hour trips), the County may request mitigation for impacts on the level of service of County roads, documented safety locations (the County calls such locations "inadequate road conditions" or "IRCs"), and access or circulation. The traffic study requirements below are intended to disclose impacts. Based on this information the County may request through the City that the applicant provide additional information showing possible mitigation measures. If any off-site improvements were needed for mitigation the County would work with the applicant to determine requirements for right-of-way, construction plans, right-of-way use permits, construction/maintenance bonds, and other issues.

Impacts on Level of Service (LOS) of County Arterials

Contact Snohomish County Public Works for the most current list of arterial units in arrears and critical arterial units. Identify any arterial units in arrears or critical arterial units impacted by three or more directional peak-hour trips.

Impacts on Inadequate Road Conditions

Contact Snohomish County Public Works for a list of the current IRCs. Identify any IRCs impacted by three or more peak-hour trips. Note: Unlike LOS impacts in which at least three or more peak hour trips have to be added in one direction to require disclosure (e.g., 3 westbound), for IRCs, any three peak hour trips added to IRC locations are considered an impact for which disclosure is necessary (e.g., 2 westbound plus 1 eastbound).

Impacts on Access or Circulation

The County may request improvements to existing roads to provide safe and efficient access and/or circulation. In some instances, the County may request provisions for future County roads identified in the Comprehensive Plan or in Small Area Transportation Studies. If so, the County will request specific additional information through the City.

Section Four (4) Traffic Mitigation Offer to Snohomish County

The applicant should complete a traffic mitigation offer to Snohomish County that summarizes the mitigation identified in the county traffic worksheet and any additional traffic study. This will facilitate timely review of the development and processing of the application. The form to use for the mitigation offer is titled "Traffic Mitigation Offer to Snohomish County." This form is typically provided to all applicants along with this traffic study checklist. In addition, copies are available from the county contacts or the Snohomish County web site shown below.

Additional Information

County Web Site

Snohomish County Public Works has a web site with many documents related to traffic studies and mitigation requirements for developers. From the Snohomish County Home Page go to:

Departments/Public Works/Divisions/TES/ProgramPlanning/3066B

County Contacts

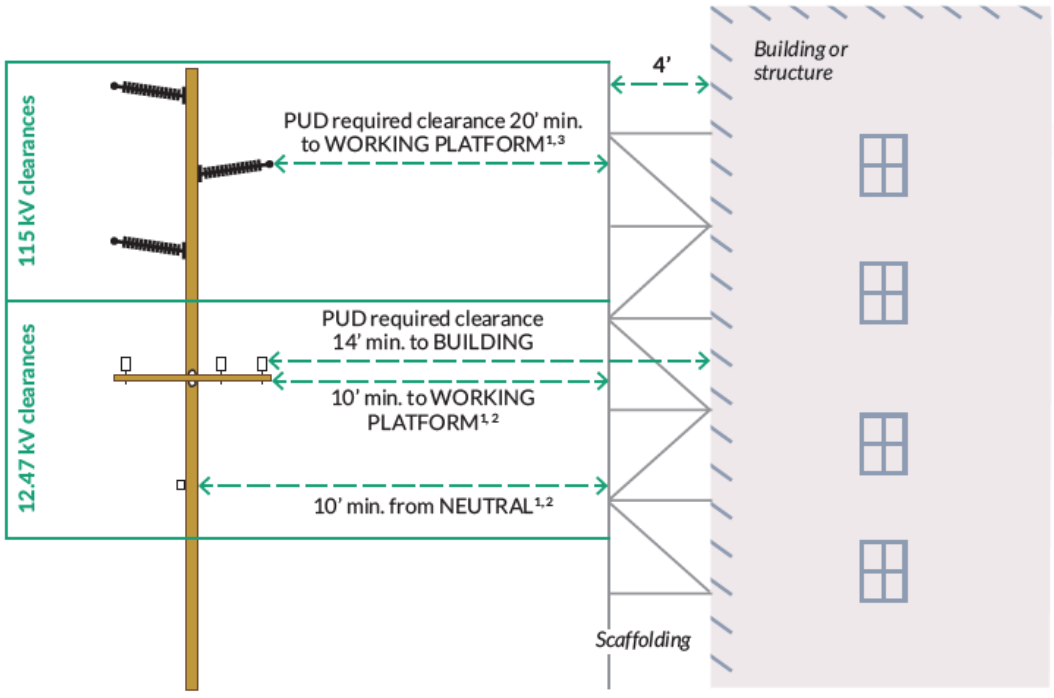
SNOHOMISH COUNTY PUD
PUBLIC UTILITY DISTRICT NO. 1

Providing quality water, power, and service at a competitive price that our customers value

April 11, 2024

Amy Hess
City of Marysville
80 Columbia Avenue
Marysville, WA 98270



Dear Ms. Hess:

Reference: PA24 008 Lakewood Heights PRD

District DR Number: 24-10-055

The District presently has enough electric system capacity to serve the proposed development. However, the existing District facilities in the local area may require upgrading. Cost of any work, new or upgrade, to existing facilities that is required to connect this proposed development to the District electric system shall be in accordance with the applicable District policy.

The developer will be required to supply the District with suitable locations/easements upon its property for any electrical facilities that must be installed to serve the proposed development. It is unlikely that easements will be granted on District-owned property, or consents granted within District transmission line corridors.

1. NESC 234A2 – Horizontal clearances (with wind displacement) – 6 lb/ft² toward structure, final sag at 60° F
2. WAC 296-24-960 (3)(a)(ii) – Minimum clearance for lines rated 50kV or below
3. WAC 296-155-53408 (1)(a)(ii) – Crane clearances up to 350kV

Please be advised that per WAC 296-24-960 the minimum worker safety clearance from any District distribution conductor is 10 feet. **Therefore, the District requires a minimum 14-foot clearance from any structure to accommodate workers, scaffolding, and ladders. Minimum worker safety clearance from 115kV transmission wires is 20 feet.**

There is a three-phase overhead feeder circuit that will need to be undergrounded along the street frontage per city of Marysville. One-phase and three-phase service will be required to serve the project. Any relocation, removal or undergrounding of District facilities to accommodate this project and the worker safety clearances shall be at the expense of the project developer and must be coordinated with the PUD in advance of final design.

There are several critical area permit matters that will need to be addressed for utilities to be installed. Please also include any required utility work in the scope of all applicable land use/development permits including for any planned over- or under-stream and wetland utility crossings and for the storm water permit.

The District policy requires the developer to provide a minimum 10-foot easement for underground electrical facilities that must be installed to serve the proposed development. In addition, the developer must maintain an 8-foot clearance between transformers and a 10-foot clearance between switch cabinets and any building/structures upon its property. Additional clearances may be required depending on the equipment in the area and accessibility of the equipment.

Please contact the District prior to design of the proposed project. For information about specific electric service requirements, please call the District's Plat Development team at (425) 783-8465.

Sincerely,

Mary Wicklund for

Mark Flury, Senior Manager
Transmission & Distribution System
Operations & Engineering

PUBLIC WORKS

MEMORANDUM

TO: Amy Hess, Senior Planner

FROM: Ryan Carney, Surface Water Inspector

DATE: 4/25/2024

SUBJECT: PA24-008 Lakewood Heights PRD

1. The City has adopted the 2019 Stormwater Management Manual for Western Washington.

   (UIC rules apply to infiltration trenches, see Volume I chapter 4 UIC Program. Contact the Department of Ecology for permitting information.)

2. For residential projects triggering minimum requirements #6 Runoff Treatment and #7 Flow Control, the stormwater facility lot will be dedicated to the City. The HOA will receive an easement to maintain the landscaping on the exterior of the lot. This policy may be modified depending on facility design. The City will take operation and maintenance responsibility for residential stormwater facilities built for minimum requirements #6 Runoff Treatment and #7 Flow Control, the dedication method will depend on final design.

If you have questions regarding these comments, please contact me at 360-363-8140 or rcarney@marysvillewa.gov.

Instructions Page

For the Developer:

Does your Project trigger minimum requirements #6 Runoff Treatment, or #7 Flow Control AND the facility(ies) will be on private property?

If "no" then this covenant does not need to be recorded.

Otherwise, please complete the enclosed documents. The draft document should be submitted for review with the other civil plan documents. It does not need signatures at that time. Exhibit B-Facilities Maintenance Plan should include a map showing where the storm water features are located on the property and describe the maintenance requirements. Once the infrastructure is built, review the document. If construction altered the stormwater utility layout update the appropriate information. The documents must be signed by all parties with an ownership interest in the property (include additional signature blocks and notary acknowledgement forms as necessary). Have the final document signatures notarized. Record before final occupancy is issued.

Recording notes:

- Do not write within the one-inch border
- Type or print legibly and in an easily readable font
- Print documents single sided and provide original copies with original signatures

When Recorded, Return to:

City of Marysville
Community Development
80 Columbia Ave
Marysville, WA 98270

Stormwater Covenant and Easement
(MMC 14.15.155)

DOCUMENT TITLE: *Project Name* Stormwater Covenant and Easement
Grantor: *Property Owner Name*
Grantee: CITY OF MARYSVILLE, a Municipal Corporation
Legal Description (abbreviated):
Assessor's Parcel(s):
Address:
Reference Number(s):
City of Marysville Project No: City of Marysville Building Permit No:
****Note**** The Auditor/Recorder will rely on the information provided on this form. City staff will not read the document to verify the accuracy or completeness of the indexing information provided herein.

Stormwater Covenant and Easement
(MMC 14.15.155)

This Stormwater Covenant and Easement (the "Agreement") is executed in favor of the City of Marysville (the "City") by the undersigned owner(s) (the "Grantor") of the following described real property situated in the City of Marysville, Snohomish County, State of Washington (the "Property") (insert complete legal description):

(attach Exhibit A if necessary to fit full legal description)

WHEREAS, pursuant to Marysville Municipal Code Chapter 14.15, as may be hereafter amended, a condition of developing the Property requires that it have adequate stormwater drainage; and

WHEREAS, the Grantor has installed a private storm drainage system for the Property; and

WHEREAS, such a private storm drainage system will require ongoing maintenance as detailed in the approved Facility Maintenance Plan to ensure it operates as designed;

WHEREAS, the private storm drainage system includes the following specified drainage control facilities, which are documented in the drainage control plan drawing(s), as amended by record drawing(s) on file with the City of Marysville. The following runoff treatment or flow control facilities are onsite:

	Detention or Infiltration Pond		BMP T8.20 Sand Filter vault
	Detention or Infiltration Vault		BMP T8.30 Linear Sand Filter
	BMP T5.15 Permeable Pavements		BMP T8.40 Media Filter Drain
	Detention Tank/Pipes		BMP T9.10 Basic Biofiltration Swale
	BMP T5.16 Tree Retention and Tree Planting		BMP T9.20 Wet Biofiltration Swale
	BMP T5.17 Vegetated Roofs		BMP T9.30 Continuous Inflow biofiltration Swale
	BMP T5.20 Rainwater Harvesting		BMP T9.40 Basic Filter Strip
	BMP T5.30 Full Dispersion area		BMP T10.10 Wetponds-Basic and Large
	BMP T6.10 Presettling Basin		BMP T10.20 Wetvaults
	BMP T7.10 Infiltration Basins		BMP T10.30 Stormwater Treatment Wetlands
	BMP T7.20 Infiltration trenches		BMP T10.40 Combined Detention and Wetpool Facilities
	BMP T7.30 Bioretention Cells, Swales and Planter Boxes		BMP T11.10 API (Baffle type) Separator bay
	BMP T7.40: Compost-amended Vegetated Filter Strips (CAVFS)		BMP T11.11 Coalescing Plate (CP) Separator Bay

	BMP T8.10 Basic Sand Filter basin		Ecology approved Emerging Technology Manufacturer: Device Name:
	BMP T8.11 Large Sand Filter basin		

Now, therefore, the Grantor, on behalf of Grantor and Grantor's heirs, successors, and assigns, agrees to the following and hereby creates a covenant running with the land that shall be binding upon all parties and their heirs, successors, and assigns forever:

(1) The Grantor, on behalf of the Grantor and the Grantor's heirs, successors, and assigns, agrees to and shall:

(a) inspect and maintain the above described drainage control facilities in accordance with the provisions of Marysville Municipal Code (MMC) Title 14, the approved Facility Maintenance Plan (attached hereto as Exhibit B and incorporated by this reference), and any other provisions applicable to the facilities, as now and hereafter in effect;

(b) implement the terms of the drainage control plan required for development; and

(c) inform all future purchasers, heirs, successors, and assigns of the existence of the drainage control facilities and other elements of the drainage control plan and the limitations of the drainage control facilities.

(2) The Grantor, on behalf of the Grantor and the Grantor's heirs, successors, and assigns, hereby grants permission for authorized representatives of the City of Marysville to enter onto the Property for inspection, monitoring, correction, or abatement of conditions related to the Property's drainage control plan, drainage control facilities, MMC Title 14, or any other MMC provision applicable to drainage control, as now and hereafter in effect.

(3) If the private storm drainage system is not maintained in accordance with the approved or record drawing design, the Grantor, on behalf of the Grantor and the Grantor's heirs, successors, and assigns grants the City the right to inspect and repair the system and assess reasonable costs for the work that may be charged against the Property, the Property owner, or any beneficiary.

(4) The Grantor, on behalf of the Grantor and the Grantor's heirs, successors, and assigns:

(a) Agrees and acknowledges that the City is not responsible for the adequacy or performance of the drainage control plan or the drainage control facilities;

(b) Agrees to accept any and all risks of harm, loss, injury, or damage related to the drainage control plan or the drainage control facilities; and

(c) Hereby waives any right to assert any and all present and future claims against the City, whether known or unknown, for any harm, loss, injury, or damage occurring either on or off the Property, related to the drainage control plan, the drainage control facilities, or drainage

or erosion on the Property, except only for such harm, loss, injury, or damage that directly results from the sole negligence of the City.

(5) This Agreement shall be recorded in the real estate records of the Auditor's Office of Snohomish County, Washington. If any provision of this Agreement is held invalid, the remainder of the Agreement is not affected.

(6) The obligations of the Grantor and each of the Grantor's heirs, successors, and assigns under this Agreement shall terminate when that person sells, devises, or transfers the Property, or his or her interest therein, unless the obligation arises out of a claim of negligence or intentional act of that person.

Now, therefore, to this end, the Grantor, on behalf of the Grantor and the Grantor's heirs, successors, and assigns, hereby grants a perpetual easement to the City of Marysville and its authorized representatives to enter the Property, inspect the private storm drainage system, and make necessary repairs, with any expenses incurred being chargeable against the Property, the Property owner, and any beneficiary.

MEMORANDUM

Date: **April 5, 2024** **PA24-008**

To: **Amy Hess, Senior Planner**

From: **Michael Snook, Building Official**

Re: **Project Name:** Lakewood Heights Planned Residential Development
Applicant: MJS Investors
Proposal: Applicant has requested Planned Residential Development (PRD) and Binding Site Plan Approval with State Environmental Policy Act (SEPA) review in order to construct a 182-lot Planned Residential Development on approximately 29.48 acres, utilizing residential density incentives consistent with MMC 22G.090. The project contains one (1) Category III wetland, and buffer from an off-site wetland extends on-site. Project will construct associated improvements, include clearing, grading, and utility and roadway extensions. The project proposes a concurrent rezone to align the split zoning of the underlying parcels with the project proposal.
Address: 1125 & 1507 172nd Street NE

In response to your request for review of the above project. Please see requirements below;

1. Applicant shall comply with any and or all provisions the 2021 Edition of the International Building, Residential, Mechanical, 2021 Uniform Plumbing Codes, and current Washington State Amendments.

2. All plans and permit applications will be required to be submitted electronically as part of their submittal process. One (1) complete set of building plans, structural calculations, and 2021 Washington State Energy Code work sheets.

3. Contact our office if you have questions in regards to permit applications, checklists and/or handouts that you or your design team will be preparing plans for on your project.

4. If any demolition of structures is proposed, and you are unsure if permit/s will be required for the removal of any existing structures. Please contact the Building Division at 360-363-8100, to ask any specific questions. An asbestos report will be required for each demo permit.

5. Separate permits will be required for any proposed rockeries or underground storm vaults. One (1) complete set of building plans, structural calculations, site plan, and Geotech Report are to be submitted for review.

6. A grading permit will be required. A Geotechnical report shall be submitted to the City for this project. This is to be an in-depth report to address the following:

    - Soil Classification
    - Required Drainage Systems
    - Soil Compaction Requirements
    - Type of Footings, Foundations, and Slabs Allowed
    - Erosion Control Requirements
    - Retaining Walls
    - Fill and Grade
    - Final Grade

Please provide the below information in regards to this overall project;

1. The building structure will be required to be designed under the 2021 IBC, Chapter 16, and Structural Design Requirements. The seismic zone criteria is to be established under the guidelines of a Washington State Licensed Architect and/or Structural Engineer.

2. Please provide scaled floor plans with square footage.

3. Show on the plans the type of building materials proposed, and if required, what type of fire-resistant construction will be required.

4. Site plan is to show the distance from the proposed structure to the property lines, from all sides of the building.

5. A Fire Sprinkler system may be required. The applicant is to verify this requirement with the Fire Marshal's Office.

6. All Electrical installations are to be permitted, inspected and approved through the City. The current code is the 2023 NEC. A separate application, plans, and plan review will be required.

7. Special Inspection may be required. The list of the type of inspections shall be indicated on the plans by the Engineer of Record. The owner is to notify the City of the registered special inspection agency prior to permit issuance.

Building application for plan review will be approximately 4-6 weeks for first-time plan review comments.

We look forward to your project coming to our City!

If I may be of any further assistance, please feel free to contact me.

Michael Snook, Building Official, 360-363-8210 or msnook@marysvillewa.gov during office hours 7:30 am – 4:00 pm, Monday through Friday.

Hello,

This is in reference to the planned residential development of Lakewood Heights, File #: PA24-008. My family and I are the residents that live on the corner of 172nd and 11th Ave and we are very concerned with the impact that this development will have on us in many ways. This development will greatly impact us since it has been brought to our attention that it will be necessary to put a round-a-bout in at the intersection of 172nd and 11th Ave to accommodate the traffic that will be created. Putting in this traffic revision will require us to lose a portion of our land, expose us to traffic which will be dangerously close to our dwelling, and also be right next to our only water source which is our water well. We had someone representing the builder come to speak to us about the development approximately a year ago and he said someone would be in contact with us before anything occurred but we've heard nothing since. Does the city of Marysville or Arlington, or whoever plans to do this project plan to absorb our land with no compensation? Recently, while working to pass the school levy, many of our community members and friends reached out to us concerned about the plans for the traffic revision and the impact it would have on our safety with the high school drivers that pour in and out of the high school each day, sometimes at high speeds. Please reach out and let us know what compensation, recourse, details, and/or plans are in motion that will affect our land, safety, water, dwelling, exposure and overall wellbeing.

Thank you for your time and attention.

Sincerely,

D. Scott Conyers

MEMORANDUM

TO: Amy Hess – Senior Planner

FROM: Jesse L. Hannahs, P.E. – Traffic Engineering Manager

DATE: May 7, 2024

SUBJECT: PA 24-008 – Lakewood Heights

I have reviewed the Lakewood Heights site plan for the proposed development at 1125 & 1507 172nd ST NE and have the following comments:

1) Traffic impact fees will be required from the City and depending on trip generation/distribution, may be required from the County and State.
2) A Traffic Impact Analysis (TIA) will be required.
    a. Planned Projects:
        i. Only projects included within the Traffic Impact Fee (TIF) calculations or those with 100% defined funding obtained by the City may be assumed as complete in the Horizon Year.
            1. 172nd ST NE & 19th Ave NE Roundabout:
                a. While improvement project is required as mitigation for the Lodge V and English Crossing Developments, it shall not be assumed that either is constructed in the Horizon Year analysis as developments cannot be assured to move forward.
            2. 172nd ST NE & 11th Ave NE Roundabout:
                a. Project is not within TIF calculation thus cannot be assumed as completed in Horizon Year.
                b. Gemmer Development is almost certainly going to be required to construct Roundabout to mitigate for Traffic impacts.
                c. Addition to 6-year TIP does not enable credit towards traffic impact fees. Only
    b. Pipeline Traffic Data:
        i. Per email communication with the developments Traffic Engineer in April, an updated TIA Addendum shall be required to consider a 2% growth plus pipeline data at the intersection of 172nd ST NE (SR 531) & 27th Ave NE.
        ii. Development Pipeline Data has been provided.
        iii. Intersection Mitigation shall be required under the following scenarios:
            1. Intersection LOS criteria is not met with the addition of development traffic in either the Opening and/or Horizon Years.

MARYSVILLE
PUBLIC WORKS

(360) 363-8100

Public Works
80 Columbia Avenue
Marysville, WA 98270

2. Intersection LOS Criteria is not met with or without development traffic in the Horizon Year and the "with development" scenario increases the intersection delay as determined by the TIA.

3) Traffic Impact Fee (TIF) Calculation:
    a. 2024 Transportation Comprehensive Plan Update is ongoing and includes a reevaluation of the TIF.
        i. When adopted the TIF amount and projects included within the calculations may change.
        ii. Adoption is not anticipated until the end of 2024.
        iii. Concurrency/SEPA will be based upon the TIF amount and projects included within the calculation at time of concurrency.
4) Frontage improvements:
    a. 11th Ave NE:
        i. Roadway shall be per EDDS Standard Plan for 50' ROW residential roadway with 28' of asphalt width including curb/gutter, landscape strip, sidewalk and street lighting.
            1. Identify minimum/maximum width for added pavement upon roadway cross-section.
    b. 172nd ST NE:
        i. Roadway shall be per EDDS Standard Plan 3-201-005 with three lanes including curb/gutter, landscape strip, 12' multi-use paths on both sides and street lighting.
    c. 172nd ST NE & 11th Ave NE Roundabout:
        i. Comp Plan calls for a four leg single-lane roundabout at this location.
        ii. Development shall be required to provide preliminary design of the roundabout in order to determine footprint and thus necessary ROW for full construction.
            1. Adjacent Property owners and Snohomish County should be contacted in regards to ROW procurement.
        iii. Development shall be required to construct roundabout as TIA shows LOS failure in Horizon Year.
            1. Roundabout construction is not a TIF listed project.
    d. 172nd ST NE & 19th Ave NE Roundabout:
        i. Comp Plan calls for a four leg multiple (east of 19th Ave NE)/single (west of 19th Ave NE)-lane roundabout at this location.
        ii. Development shall be required to construct roundabout if other developments required to construct roundabout do not construct prior to the Gemmer Development as TIA shows LOS failure in Horizon Year.
            1. Roundabout construction is not a TIF listed project.
5) Per EDDS 3-506, street lighting will be required upon all public street frontages as part of civil construction plans.
    a. Street lighting on 172nd ST NE shall be required as decorative style street light assemblies with LED fixtures to match existing fixtures on each street.
        i. 172th ST NE shall be designed as Principal Arterial/Commercial.

ii. Fixtures would be Lumec Renaissance Series per to be provided City Specification.
    1. Specification should be requested via emailed to jhannahs@marysvillewa.gov
    2. PUD street lighting shall not be installed in Lakewood area upon arterial or connector roadways.
iii. Lighting design shall incorporate fixture wattage to match those already installed upon each respective roadway.
iv. Photometric layouts shall be required for design with photometrics consisting of staggered lighting on both sides of each roadway and development to install only street lighting on frontage side of each roadway.

b. Street Lighting upon residential streets of 11th Ave NE and all internal roadways shall be PUD installed fiberglass pole installation type street lighting.
    i. Street shall be designed as collector arterial utilizing 100 watt equivalent LED fixtures.
    ii. Spacing of fixtures should be approximately 180'-220'.
    iii. As part of civil construction approval proposed PUD street lighting locations shall be provided by the City for inclusion within the PUD site electrical plans for City review.
    iv. Contact Eddie Haugen of Snohomish County PUD at (425) 783-8276 or wehaugen@snopud.com for more information regarding PUD street lighting.

6) Driveway placement:
    a. To the extent feasible, driveways shall be staggered, not opposing each other.
        i. Opposing driveways result in parking occurring at the same location on both side of the street with challenges then being placed upon emergency vehicles and sanitation and thus citizen unhappiness with requests for parking to be restricted to one side only which is not desirable for citizens or maintenance purposes.
7) Channelization and Signing Plan shall be required as part of civil construction plans for all public roadways.
    a. Stop sign and stop bar shall be signed upon all approaches to an arterial such as 172nd ST NE.
    b. Street name signs shall be installed at all intersections or locations where street names change such as 90 degree turns.
    c. 25 mph speed limit signs shall be installed at all entry points from an arterial or a roadway with a different speed limit.
    d. Parking restrictions shall be placed on the outside of all 90 degree turns, 10-15' to either side, as sanitation has challenges with garbage pickup when parking occurs near curve bulb outs.

MARYSVILLE COMMUNITY DEVELOPMENT
Lakewood Heights
File #PA24-008

Planned Residential Development
Cause No.
PROTEST LETTER OF THE PROPOSED DEVELOPMENT

We, the residents of 11th Ave and Lakewood community, are writing to express our strong opposition to the recent Planned Residential Development. As residents of this neighborhood, we believe this development is detrimental because of the reasons listed below.

1. **This development would substantially impact all the residents that live on 11th Ave NE and of the surrounding areas.**
2. **The development would impact our quiet way of life and put stress on our pets, farm and wildlife animals.**
3. **11th Ave is a county road maintained by Snohomish County and under the jurisdiction of Snohomish County (It's not part of the city of Marysville).**
4. **The development would significantly impact the wildlife that resides in the forest on said proposed property for development.**
5. **The endangered grey squirrels, owls, deer, and other animals that live and use the forest for their home and protection and survival would be greatly impacted and even more endangered by the development.**
6. **We the residents of 11th Ave NE question the annexation of this property into Marysville when the rest of the properties on 11th Ave ae zoned rural "5-acre partials"**
7. **We, the residents of 11th Ave NE and the community of Lake wood question the Sepa report as parts of the property hold substantial water.**
8. **Additionally, this would put a hug strain on Lakewood schools as they are already at max compacity.**

We urge you to reconsider this development change and explore alternative solutions that address the concerns without [negative outcome]. Thank you for your attention to this matter.

Contact information: Allen Coker 425 879-6677.

Please be advised we the undersigned are seeking counsel.

We the undersigned vehemently protest the approval of said project.

Response to Comments

Project Name: Lakewood Heights Rezone PRD
Project File Number: PA24-008 - Technical Review 1
Review Completion: April 26, 2024

CITY COMMENTS	LAND TECH RESPONSE
Community Development Dept: **Reviewer: Amy Hess, Senior Planner**	
1. Include File Number PA24-008 on all future correspondence, in addition to all site, civil and landscape plans.	File Number updated
2. Work with Public Works/WSDOT on the amount of right-of-way dedication needed for the roundabout (RAB) at 11th Avenue and 172nd Street. The area dedicated can be used as open space in the interim, but will need to be dedicated as part of this proposal. Please provide an updated density calculation deducting the area dedicated.	We have used the 20% max reduction of area which would not change the yield.
3. The project narrative suggests another BLA is proposed. If another BLA is proposed, please provide a layout of the proposed adjusted lots.	No other BLA is proposed. The Recorded BLA from an earlier submittal is the same "BLA" as proposed here. I am not sure where it was suggested another BLA is proposed. The only mention was that the Assessor's

CITY COMMENTS	LAND TECH RESPONSE
	office has not updated the Portal Map to show the BLA as it was recorded.
4. Is the project proposed to be phased? No phasing plan was mentioned in the project narrative, but phases are shown on site plan. If phasing is proposed, please describe the phasing plan. It appears that if Phase 1 is constructed as depicted, there will be only one access point. Marysville Fire Marshall may require fire sprinklers in units for which there is only one access point.	Phasing has been re-adjusted to include the primary entrance from 172nd St and a second connection to 11th Ave. No homes on dead end temp roads more than 150' long.
5. Please depict all plottable easements/encumbrances listed in the title report on the site plan and any existing water wells and/or septic systems within 200 feet of the project.	Existing drainfields and plottable easements are added to Sheet P2 and C4. One easement for the drainfield to the Service Station to be vacated as sewer is extended to site and approved for hook-ups. An existing house is to be removed. One house on 172nd to remain but driveway to be relocated to plat side of house. Drainfields to the existing homes to be decommissioned. The house to remain will be connected to sewer. Homes along 172nd are on Marysville Water. No known existing wells.
6. The preliminary Civil Plans have a 'Road C' depicted on some sheets, but not all, and there is no 'Road C' on the plat map. Please ensure road names are consistent on all plan sheets/sets.	More consistent labels provided
7. It does not appear this property is eligible for Residential Density Incentive (RDI) 5a. The nearest fire and/or police station is well over 1 mile away. Please identify an alternative RDI to earn the desired additional units. Please also note that partial units cannot be earned, only whole units (see MMC 22C.090.050(4)).	This has been resolved and is to be allowed per early emails.
8. If you do not intend to utilize RDI 3a, please remove it from the table on sheet P3.	We would like to leave it as a fall back in case for some reason the other Incentives are compromised, we can use this to make sure we can get to the yields as proposed.

CITY COMMENTS	LAND TECH RESPONSE
9. Please identify where perimeter fencing is proposed in order to achieve bonus units so that staff can verify these areas are not otherwise required by code to have fencing installed.	Perimeter fences have been "coded" to distinguish fences required by code and those that should be counted to get Bonuses.
10. Pursuant to MMC 22C.065.040(2)(a), the site shall be oriented and designed to create an attractive street edge and accommodate pedestrian access. The following provisions apply: (i) The street edge shall be defined with buildings, landscaping or other features. (ii) Primary building entrance(s) shall face the street unless it is not feasible due to parcel size, topography, environmental conditions, or other factors as determined by the director, and alternate design elements are incorporated into the facade which enliven the streetscape. ???? (iii) Buildings with individual ground floor entries should face the street and/or common open space to the extent possible. (iv) Buildings shall provide windows that face the street to provide "eyes on the street" for safety. To meet this requirement, at least 15 percent of the facade facing the street shall be occupied by transparent windows or doors. See Figure 2 in review letter. (v) Provide for a sidewalk at least five feet wide if there is not space in the public right-of- way. (vi) Provide building entries that are accessed from the sidewalk. These pathways must be separated from parking and drive aisles and	We have chosen to go with the alternative of the 20' landscape screen along 11th showing some architectural relief on those buildings.

CITY COMMENTS	LAND TECH RESPONSE
must not cross a parking lot. (vii) Unless the building is immediately adjacent to the public ROW, the yard or open space between the street and the building front shall be landscaped. At least 20 percent of the landscaped area shall be trees and shrubs. (viii) Private ground floor living spaces directly facing a public ROW and within 60 feet of the street shall be screened with planting (shrubs and trees) at least two feet high. The current layout/design on 11th Avenue does not meet these standards. City staff and the Community Development Director have discussed and determined a couple of options that would meet the standards. The options are outline below: • Orient homes on lots adjacent to 11th Ave so that the front/primary entrance faces 11th Ave, including pedestrian pathways connecting the front entries to the public sidewalk. • As an alternative to home orientation towards 11th Ave, the Director has agreed to allow re-alignment of the landscape tracts adjacent to 11th Ave to be consistent, uniform width at least 20 feet wide, (tracts 981 982, 983, and 980) and installation of a decorative fence (not standard 6' cedar), decorative masonry wall, or other hardscaped fencing.	Landscaping of homes to be provided after homes are built Have modified plans per this option, we now show a 20' landscape buffer between the homes along 11th Ave NE. We also show a fence along the "backside" of the landscape. This fence is identified as required and is not used to get RDI bonus points.
11. Depending on the option you choose in item 10 above, an alternative RDI for the units earned using 7f may be needed.	Enhanced landscape reduced to Tract 983 for 1.36 credits. Enhanced landscape buffers along 11th have been removed from the bonus calculations.
12. Pursuant to MMC 22C.065.060(3), Where lots front on a public street, the house shall have doors and windows	The homes along 11th will be mitigated as described above. They will have doors and windows that face the street.

CITY COMMENTS	LAND TECH RESPONSE
which face the street. Houses must have a distinct entry feature such as a porch or weather- covered entryway with an entry feature that is at least 60 square feet with no dimension less than six feet. Where lots front on a common open space or pathway, the requirements for orientation are the same as for a public street. The director may approve a street orientation or entryway with dimensions different than specified herein; provided, the entry visually articulates the front facade of the dwelling so as to create a distinct entryway, meets setback requirements, provides weather cover, has a minimum dimension of four feet, and is attached to the home.	Homes that have sides to the street at the Autocourts or shared driveways will show architectural relief and will have corner entry with sidewalks from the corner entry that goes to the Public Street and to the Autocourt. This is really going to be a building permit issue.
13. Fencing and/or landscaping shall separate, while maintaining visual observability of, recreation areas from adjacent lots, parking areas, driveways, streets, and other accesses. Additional landscaping should be installed along the eastern boundary of Tract 985, and Tract 994.	A three- or four-foot solid fence with 2 or 3 feet of lattice work is proposed for all lots, parking areas, driveways along Open Space Recreation areas. A 4' high vinyl coated black cyclone fences will be along streets and other accesses. Landscape graphics are showing on the PRD-Preliminary Plat Plans and will be formalized with the landscape plans to be submitted with the Engineering Plans
14. The grading in Tract 994 appears rather steep. Is this conducive for recreation and proposed amenities?	Tract 994 is called out as "Passive Open Space—recreation". First, we have delineated some flat benched areas near the sidewalk that will have benches overlooking the wetland areas to the north. These overlooks will allow for observational areas to watch birds and wildlife activity in the wetlands. And, kids with cardboard slides will love it 😊
15. Please provide base and top elevations for all retaining walls on civil plans.	Base and Top Elevations have been added on C6 Grading Plan overview.
16. Pursuant to MMC 22G.080.100(2)(g)(iii), trail segments shall be improved with an all-weather surface (gravel surfacing is not considered an all-weather surface). Please revise	The trail path section has been added on P6 Open space & landscape concept plan.

CITY COMMENTS	LAND TECH RESPONSE
accordingly.	
15. On the interior plat roads, the single-family residences should face the street. Where side yards need to abut the street along arterials or the interior plat roads, an architectural approach similar to what is shown below should be proposed in lieu of the house facing the street. In the example below, the front of the house is oriented towards the auto court while the elevation that faces the street has variation in siding, windows, trims, and a gable entry feature with decorative posts that gives the sense of the house being oriented towards the street. On lots that take access off of an auto court that have a side yard abutting the street, a pedestrian pathway should be provided to the street and auto court (lots 88, 93, 81, 84, 72, 67, 163, 168, 147, 179, and 182). This orientation, coupled with a pedestrian pathway that connects both towards the autocourt and the sidewalk along the street side of the interior plat roads, meets the intent of the Lakewood Neighborhood Master Plan design guidelines, and preserves private back yards.	The plans do show sidewalks on "corner" lots going to the road on the side and to the front. The intent is that the houses on these corners be designed and built per the LNMP design guidelines. That should be a condition on the building permit approval process.
16. Please review comments from the below related to the round-about at 11th Avenue and 172nd Street. 16.1. See comments from Community Transit related to the round-about (RAB) and bus stop locations. 16.2. Please see comments from WSDOT related to RAB and TIA. 16.3. Please see comments from City Traffic Engineer and Civil Plan Reviewer related to RAB.	Comments reviewed--RAB going into WSDOT about time of this resubmittal. Better bus stop location were shown to CT during meeting. Bus stop should be in front of the empty lot west of the service station. That would be more central to the people that would use the bus. There is to be a crosswalk from the school at that location and it is closer to the apartments proposed for adjacent sites. CT should not be allowed to stop in the approaches to the RABs. That is just too disruptive to other traffic.

CITY COMMENTS	LAND TECH RESPONSE
17. Prior to civil construction plan approval, the applicant shall demonstrate that the natural topography of the site is preserved to the extent feasible, and that the proposal complies with the design criteria outlined in MMC Section 22D.050.030(4). The applicant shall design the project to ensure a smooth transition to neighboring sites.	Will show to "…the extent feasible"
18. Overhead utilities on all frontages on 172nd Street and 11th Avenue, as well as internal plat roads, shall be placed underground.	Working with PUD on this now
19. Pursuant to MMC 22C.065.130(3) *Block Size,* new development shall provide an integrated and connected network of streets to provide "direct" walking route options, orientation, a sense of place, and multiple travel route options. A street network dominated by long, irregular loop roads and cul- de-sacs is not appropriate. Blocks shall be designed to provide vehicular connections at intervals no greater than 600 feet and pedestrian access at intervals no greater than 300 feet (200 feet is preferred). It appears additional pedestrian access/connections are needed to meet the appropriate intervals.	This plan provides sensible connections to pedestrian facilities. Comp plans dream of a flat white paper ideal but the 3D world does not always fit this "flat paper" goal. This proposal does meet the intent with road and sidewalk connections placed where viable and sensible
20. Shared access driveways/autocourts will be required to be constructed with scored concrete, paving blocks, bricks, or other ornamental pavers to clearly indicate that the entire surface is intended for pedestrians as well as vehicles, as outlined in the City of Marysville Design Guidelines and Engineering Design and Development Standard (EDDS) Section 3-219, or as amended. A detail of the surfacing of the autocourt will be required to be provided on the civil construction plans and approved by the City Engineer.	Understood

CITY COMMENTS	LAND TECH RESPONSE
20.1 Tract 969 does not appear meet the definition or intent and design standards of an autocourt. An autocourt provides ingress and egress to clusters of dwellings; ends in a 'court' or courtyard area used for garage access and other activities; and is walled by buildings on three sides. See examples of what meets the standards below.	Tract 969 has been modified to meet what seems to be a very restrictive policy on these Have a meeting to discuss access challenges, the Design Guidelines and the plan to reduce these options to an autocourt configuration that does not meet the examples per the Guidelines
21. Please see comments from Deputy Fire Marshall, Brian Merkley that include, in part, the following: ○ At a minimum, the following lots will require fire sprinklers due to distance from ROW: 12-13, 42-45, 69-70, 90-91, 103-104, 165-166, 174-177, and 180. ○ Additional hydrants will need to be added to satisfy spacing requirements. Road B in front of Tract 996 and in front of Lot 59.	Would like a little explanation as to why please. Is this not based on a "hose drag" to the back corner of the building from a Fire Lane? The Autocourts are 20' wide and 150 deep to provide Fire Truck access. Except for Tract 968 (lots 12 & 13), the autocourt configuration has changed. Fire hydrants have been added in front of Tract 996 and Lot 155.
22. The applicant shall be required to obtain all necessary Federal, State and local permits for any critical area or buffer impacts prior to commencing construction.	Understood
23. Decorative street lighting shall be provided where required by the City's Traffic Engineer Manager pursuant to MMC 22C.065.390, *Decorative Street Lighting Standards.*	As understood
24. A final landscape plan shall be required to be approved, prior to civil construction plan approval, and designed to comply with the applicable provisions outlined in MMC Chapter 22C.120, *Landscaping and Screening*	Understood—final plans will be submitted with engineering plans.

CITY COMMENTS	LAND TECH RESPONSE
and MMC 22C.065. **Specifically, please revise the Landscaping Plan to include:**	
19.1. Detailed planting plan for the mitigation planting plan including specifics for buffer enhancement areas and buffer replacement areas.	Are these part of Landscape Plans or CA Mitigation plans.
19.2. Typical side view of perimeter landscape buffers.	Not sure what a typical "side view" is?
19.3. Please identify what is proposed in the white area in tract 999 below.	We did remove the portal to the alternate universe 😊
24. Proposed fencing shall be in accordance with MMC 22G.080.120	
25. Prior to recording the **FINAL BSP** the applicant shall be required to provide **FINAL** restrictive covenants as required by MMC 22G.080.120 and including provisions to address parking enforcement, together with a statement from a private attorney as to the adequacy of the same to fulfill the requirements of the PRD code	understood
26. The following are the impact fees that apply to this project. School and Park fees are based on the fee in effect at this time a building permit is accepted by the City. See chart in review letter	Impact fees to be paid as required
Community Transit: Reviewer: Kathryn Boris	
Community Transit has some concerns about the proposed development, Lakewood Heights PRD, namely the geometry of the roundabout located on 172nd St NE and 11th Ave NE. The displayed geometry does not appear to meet standards that would allow bus operations, especially in the west bound direction.	The final design going to WSDOT is oval and does provide turning geometry to allow busses to use without going over the median.
There are concerns about access to Lakewood High School. We are aware of	As describe in previous comment, the bus should not be stopping in the roundabout—

CITY COMMENTS	LAND TECH RESPONSE
a lack of infrastructure, namely sidewalks and pedestrian crossings across 172nd St NE that are creating unsafe situations for the high school students that use our service on Route 240. The addition of, and/or relocation of bus stops as part of this project, along with potential pedestrian infrastructure (such as RRFB or HAWK) could alleviate that issue and provide safer connectivity for students and residents in this area.	that delays other vehicle traffic and is unwarranted (rude). The bus stop should be in front of the lot west of the service station. There are some 80 apartments planned for that area and near 300 planned for the parcel adjacent to the RR property. This location is more central to the residents most likely to use the Bus and does not delay traffic.
We would appreciate the opportunity to meet to discuss these concerns and propose potential solutions by integrating our transit service better in this area.	We did have a meeting
WSDOT: Reviewer: Dawn Anderson	
Traffic Engineer says they could use the approved ICE if the Developer proposes a roundabout but they want a new TIA to evaluate the proposed LOS for the approved one-lane RAB. If the one-lane RAB fails, the TIA should propose suitable improvements to the RAB like right turn lanes.	Updated TIA provided. One lane meets the demand of the of the project LOS
Civil Plan Review: Reviewer: Shane Whitney, Civil Plan Review	
1. <u>Existing utilities:</u> a. Sanitary sewer: Sanitary sewer has yet to be extended to the property, but it is getting close to 172nd Street. b. Water: There currently is a 12" cast iron water main running along 172nd ST NE and can be found on record drawing W775. c. Storm: Storm currently runs along 172nd ST NE and can be found on record drawing RD282.	Sewer now extended near to 172nd. English Crossing will likely extend to the SW corner of their property. This project is working with BNRR to bore under RR. This project will be connecting to this line Thank you
2. Per MMC 14.03.250, utilities are to be extended along the street frontages of the proposed project. a. Sewer will need to be extended along the projects frontage and	We had settled on a sewer extension plan on a previous submittal with Ken M. Need to

CITY COMMENTS	LAND TECH RESPONSE
within the new City roads. The sewer will need to route up 172nd street and enter into the site via Road C. Sewer will also need to be made available to the homes at 1205, 1215 and 1227 172nd Street.	make sure we are all in agreement on what needs to be done here. 😊
b. Water main installation will be required within the plat.	Concept plans do show water in the plat
c. Storm drainage will need to be provided for the widened sections of existing City roads as well as the new plat roads.	SWM concepts provided
3. **Frontage Improvements:** Frontage improvements are required per MMC 12.02A.090 on all projects. Frontage improvements are described as curbs, gutters, and sidewalks; underground storm drainage facilities; patching the street from its preexisting edge to the new curb line; and overlayment of the existing public street to its centerline.	Concept frontage improvements are shown on plans. Details will be added with submittal for Construction Permits
a. The Traffic Engineer shall provide the guidance of what will need to be constructed along 172nd Street.	The frontage on 172nd is all part of the 11th Ave NE roundabout and is shown on plans
b. 11th Ave NE is considered a local access street, half street improvements shall be compliant with SP 3-202-002 of the EDDS. If the depth of existing roadway section is lacking the City standard for depth of materials, full depth replacement of asphalt will be required. At a minimum, a 2-inch grind and overlay to the center of the right- of-way will be necessary.	Frontage improvements shown are per standard. Grind and overlay to be detailed on Construction plans.

CITY COMMENTS	LAND TECH RESPONSE
4. **Dedication Requirements:** a. For 172nd Street approximately a 12.5 foot dedication will be necessary, depending on possible citing of the future roundabout, that could dictate what the ultimate dedication might be.	Thirty foot of ROW is being dedicated to allow for 50' half ROW. This aligns with the Service Station ROW per WSDOT requirements. Extra ROW is being provided to allow for offset ROW
It does not appear dedication is necessary along 11th Ave. Through the design process should that change, the applicant will dedicate that area necessary	The dedication on 11th is currently accurate-no dedication required except that provided to offset the RAB to avoid taking property from others.
5. **Access**: a. The new roads to be constructed shall be compliant with SP 3-218-001 of the EDDS.	New roads designed per the PRD Access Street with Street Parking Standard
b. Tract 967 should be a public street, entire road section will need to have a 5 foot planter followed by a 5 foot sidewalk.	Tract 967 was created to be a reserve area for adjusting the Roundabout when its design was completed. This is now all ROW
c. The minimum width of a residential driveway is 12-feet and the maximum is 26- feet. Curb cuts shall be limited to a 20-foot maximum.	Driveways are 20 ft wide
d. The west end of Road B appears to have the proper amount of separation from 172nd Street, but without a conceptual location of the roundabout, I do not know if the separation requirement is being met.	265 feet of separation on this dead-end road
e. Please provide a conceptual drawing with a probable placement of the future roundabout at the intersection of 11th Ave and 172nd Street.	RAB as being submitted to WSDOT is shown on these resubmitted plans
f. Auto courts are permitted in a PRD. The auto court is to be built per the private road profile, SP3-202-004, with decorative concrete or stamped asphalt. They shall serve 6 lots maximum. In looking at Tract 969, I'm not sure this as configured meets the intent of an autocourt.	Similar configurations have been built on other projects near here. Some by others and some by ourselves. Have meeting to discuss these access issues and Design Guidelines for autocourts and other flexible design issues for access Autocourts revised to the very restrictive configuration that may be required.
6. **Drainage:** All projects in the city of Marysville must comply with	

CITY COMMENTS	LAND TECH RESPONSE
requirements stipulated under the MMC 14.15.040 and 14.15.050. a. Stormwater drainage: The city has adopted the 2019 Ecology Manual. The project must be compliant with minimum requirements 1 - 9. The following considerations will be necessary in subsequent reports:	
• With the interflow that will happen onsite, will these gravel trenches truly function as planned? With the size and shape of them, we should be looking at having the underdrains constructed with a manifold design at a minimum.	-site is at a high point, all 'interflow' generated from the site is mapped to stormwater facilities. Underdrain will convey stormwater from the gravel facilities. Manifold system would not be necessary. Geotech report states that interflow is relatively thin and volume was light. Natural interflow is highly modified with all the impervious surfaces and onsite trenching. What would be interflow is intercepted and conveyed to these rock chambers
• The use of these gravel trenches for storage of stormwater on this type of scale seems like a problematic design combined with the likelihood of interflow mentioned in the geotechnical report. With wanting to use these areas also as recreational space above the systems, a vault system may very well work as a better use.	-vaults are an exorbitant cost and delay. Rock is the most environmentally conscience storage medium for water, similar to a natural aquifer. Interflow is very minimal on a developed site, roads and roof tops are catching and conveying what would be interflow directly to the SWM facilities
• The report states that MR 8 is not applicable, Tract 988 does discharge towards a wetland. It must be noted how compliance is achieved for wetland protection.	-Offsite wetland to the north is category III with habitat score of 5. Wetlands hydroperiod protection method 2 is only from category iii and iv wetlands that have a score greater than 5. This wetland does not meet the habitat score.
• The supplied basin map is not specifically calling it out and the plans show that everything on 11th Ave is being bypassed. Justification must be provided that this area can be bypassed.	The first plan over-detained onsite for the added impervious surface on 11th and treated the "over-detained" runoff on 11th as bypass. This has been modified and cells have been added along 11th that does take the runoff to a separate biocell. One small area of the roundabout itself will be treated as bypass, measures under 2,000sf, NW corner. All other portions of the roundabout are placed above existing
• At time of civil plan submittal, a conveyance analysis will be	

CITY COMMENTS	LAND TECH RESPONSE
necessary. b. A geotechnical report has been submitted. c. The maximum allowed impervious surface coverage for a PRD is 70%.	impervious that does not replace existing pavement below Base course. Conveyance analysis to be provided Actual impervious under 60%
9. The onsite grading and placement of any retaining walls must be compliant with section 22D.050.030 of the MMC. It appears there is quite a bit of grading happening onsite, is there an opportunity to lessen some of the grading to work more with existing elevations? Direction from City council has asked to reduce retaining walls against adjacent residential properties. Please take another look at the potential to revise the onsite grading.	The site is deceiving but has significant topographic relief. Grading is required to reach minimum yield and required to provide stormwater detention and discharge onsite. We have looked at this several ways and have minimized retaining walls as much as feasible given the terrain Reviewed and did minimize as much as feasible given the terrain.
11. The applicant is responsible for identifying any existing well or septic systems on site or on adjacent properties. If there are any existing septic systems on site they need to be decommissioned based on the Snohomish Health District standards. If there are any wells on site they need to be decommissioned based on Department of Ecology standards.	Thank you. Note added to civil site plan. Note *"Septic systems will be decommissioned based on the Snohomish Health District Standards. Existing wells to be decommissioned based on Department of Ecology Standards."* has been added on P2 Existing Survey Map.
Fire Department: Reviewer: Brian Merkley, Deputy Fire Marshall	
2. WATER RELATED	
a. At a minimum, the following lots will require fire sprinklers due to distance from ROW: 12-13, 42-45, 69-70, 90-91, 103-104, 165-166, 174-177, and 180. Remaining lots may require fire sprinklers depending on building height and/or available fire flow. *More*	These lots will have notes on the Civil Plans denoting 1" meters A Fire Flow Letter was submitted. Ryan Keefe provided fire flow test results from the frontage of this property and it was measured at 3,076 GPM @ 20 psi.

CITY COMMENTS	LAND TECH RESPONSE
information needed for determination.	A note has been added on C36 Sewer and water overview plan. “1” meters for Lots 12-13,42-45,69-70,90-91, 103-104, 165-166, 174-177, and 180; 5/8” meters for the remaining lots”
b. It is the developer's responsibility to see that adequate water for fire protection is attainable. The minimum required fire flow is determined using IFC Appendix B, and depends upon building sizes, construction types, and sprinkler systems. Proof of fire flow will be required. *No fire flow information provided at this time*.	Fire flow is adequate for these single-family homes.
c. Documentation/certification of available water supplies for providing the required fire flows is required for final approval of the water system for this project and prior to building construction. Check with the city Public Works Dept. for water system information.	Have Letter on Fire Flow, will be submitted again.
d. Provide water main extensions with hydrants along the new roadways and at all road intersections in approved locations, with maximum spacing of 600' apart. *Additional hydrants will need to be added to satisfy spacing requirements. Road B in front of Tract 996 and in front of Lot 59.*	Additional hydrants have been added in front of Tract 996 and in front of Lot 155.
g. Future homes to be constructed may require residential sprinkler installation for a number of reasons, including: if homes are three or more stories tall, if fire flow from hydrants does not meet fire code requirements, if any part of homes is further than 200' from the public road ROW with	Homes are two story structures. Per tests on adjacent hydrant-fire flows around 3000 gpm. Hydrant spacing criteria is met onsite per MMC and IFC. No sprinklers required unless previously identified.

CITY COMMENTS	LAND TECH RESPONSE
no hydrant provided on-site, or to mitigate access deficiencies.	
3. ACCESS RELATED	
a. Turnaround provision is required for dead-end access in excess of 150 feet long. Turnarounds shall comply with city standard plans. (MMC 9.04.503.2.5). *Access shown on plans appears acceptable.*	Thank you
b. "Where the vertical distance between the grade plane and the highest roof surface exceeds 30 feet (9144 mm), approved aerial fire apparatus access roads shall be provided. For purposes of this section, the highest roof surface shall be determined by measurement to the eave of a pitched roof, the intersection of the roof to the exterior wall, or the top of parapet walls, whichever is greater." (2021 IFC D.105.1). *Building heights are not known at this time.*	They are projected to be 2 story buildings
c. Aerial fire apparatus access roads shall have a minimum unobstructed width of 26 feet, exclusive of shoulders, in the immediate vicinity of the building or portion thereof. (2021 IFC D.105.2).	These are two story homes and will not require aerial access.
f. "**NO PARKING - FIRE LANE**" signs are required on both sides of all roads that are 26 feet wide or less. The signage shall be identified on the approved Civil Plans. (MMC 9.04.101, 2021 IFC Appendix D103.6.1)	Signage or striping will be shown on Civil plans When did Fire Lanes go from 20' to 26' wide????? We do not require aerial apparatus roads.
Public Works: Reviewer: Ryan Carney, Surface Water Inspector	
1. The city has adopted the 2019 Stormwater Management Manual for Western Washington. (UIC rules apply to infiltration	There are no infiltration systems on this project that would meet the UIC rules and need permitting

CITY COMMENTS	LAND TECH RESPONSE
trenches, see Volume I chapter 4 UIC Program. Contact the dept of Ecology for permitting information.	
2. For residential projects triggering minimum requirements #6 Runoff Treatment and #7 Flow control, the stormwater facility lot will be dedicated to the City. The HOA will receive an easement to maintain the landscaping on the exterior of the lot. This policy may be modified depending on facility design. The City will take operation and maintenance responsibility for residential stormwater facilities built for minimum requirements #6 Runoff Treatment and #7 Flow control, the dedication method will depend on final design.	Dedication format to be determined with final design
Stormwater covenant and Easement form included in Review Letter. An Extract has been saved in Drainage folder	Covenant and Easement to be provided during LDA Permit process
COMMUNITY COMMENTS	
Neighbor Comment: **Scott Conyers; scon72@hotmail.com**	
This is in reference to the planned residential development of Lakewood Heights, File # PA24-008. My family and I are the residents that live on the corner of 172nd and 11th Ave and we are very concerned with the impact that this development will have on us in many ways. This development will greatly impact us since it has been brought to our attention that it will be necessary to put a round-about in at the intersection of 172nd and 11th Ave to accommodate the traffic that will be created. Putting in this traffic revision will require us to lose a portion of our land, expose us to traffic which will be dangerously close to our dwelling and also be right next to our only water source which is our water well.	An email has been sent to Mr. Conyers and a phone message sent letting him know he could contact us with questions if needed. The roundabout will not take any of his land and a cut has been made in the median to allow him full access to his driveway.
We had someone representing the builder come to speak to us about the development approximately a year ago and he said someone would be in contact with us before anything occurred but we've	The Developer that did meet with him was likely one that dropped out of the purchase. Others have not gone to him as the roundabout has been designed to avoid taking

CITY COMMENTS	LAND TECH RESPONSE
heard nothing since. Does the city of Marysville or Arlington, or whoever plans to do this project plan to absorb our land with no compensation?	property from others. It has been designed to only take land from the Lakewood Heights PRD only.
Recently, while working to pass the school levy, many of our community members and friends reached out to us concerned about the plans for the traffic revision and the impact it would have on our safety with the high school drivers that pour in and out of the high school each day, sometimes at high speeds. Please reach out and let us know what compensation, recourse, details, and/or plans are in motion that will affect our land, safety, water, dwelling, exposure and overall wellbeing.	The project is being built per codes, standards and RCWs. Projects in compliance with codes, standards and RCWs is generally considered to meet Health-Safety-Welfare requirements. The addition of the roundabout should mitigate most issues on safety at that poorly controlled intersection.
Neighbor Comments: **Allen Coker & signed by community members; 425.879.6677**	
We, the residents of 11th Ave and Lakewood community, are writing to express our strong opposition to the recent Planned Residential Development. As residents of this neighborhood, we believe this development is detrimental because of the reasons listed below.	We can understand your concerns about growth or change in your community. Unfortunately, your neighborhood happens to be adjacent to an area designated by the State of Washington through Growth Management Act (GMA) to accept growth for a growing population.
1. This development would substantially impact all the residents that live on 11th Ave NE and of the surrounding areas.	We are all being impacted by growth in the area and as long as the population continues to grow, development will be needed for that population.
2. The development would impact our quiet way of life and put stress on our pets, farm and wildlife animals.	Unfortunately, the government does not seem to recognize yours and my comfort—the government needs to manage the population as a whole.
3. 11th Ave is a county road maintained by Snohomish County and under the jurisdiction of Snohomish County (It's not part of the city of Marysville).	The first 1330 feet of 11th north of 172nd is indeed in the City of Marysville. The City extends to the west side of 11th Ave NE. North of this is all County.
4. The development would significantly impact the wildlife that resides in the forest on said proposed property for development.	No doubt that wildlife that may be living in these areas will be impacted. GMA has taken this into consideration and has only designated less than 5% of the State for Urban Growth.

CITY COMMENTS	LAND TECH RESPONSE
5. The endangered grey squirrels, owls, deer, and other animals that live and use the forest for their home and protection and survival would be greatly impacted and even more endangered by the development.	There are no known endangered species on this project area. Some of the forest area is being preserved. The animals mentioned will migrate to adjacent areas.
6. We the residents of 11th Ave NE question the annexation of this property into Marysville when the rest of the properties on 11th Ave are zoned rural "5-acre parcels"	The time to have questioned annexation was several years ago.
7. We, the residents of 11th Ave NE and the community of Lakewood question the SEPA report as parts of the property hold substantial water.	Professional Consultants did provide reports that did identify any critical areas that have been verified by jurisdictional authorities.
8. Additionally, this would put a huge strain on Lakewood schools as they are already at max compacity.	By mandates from the State's Growth Management Act, Schools are mandated to plan for growth to accommodate expected population growth.
We urge you to reconsider this development change and explore alternative solutions that address the concerns without [negative outcome]. Thank you for your attention to this matter.	This project is proposed and planned per the State RCWs, City Zoning Codes, and City Design Standards. This site will provide homes for 182 families and the needs of the future families that will live here should be also considered.
Please be advised we the undersigned are seeking counsel	Seeking Counsel is certainly your right but please be advised that when a development project is proposed per the laws, codes, and standards that govern it, it will get approved.

PA24-008 Lakewood Heights

First Review MJS Traffic Technical Review Comments 5-7-24

Traffic Reviewer: Jesse L. Hannahs. P.E.

I have reviewed the Lakewood Heights site plan for the proposed development at 1125 & 1507 172nd ST NE and have the following comments:

1) Traffic impact fees will be required from the City and depending on trip generation/distribution, may be required from the County and State.
2) A Traffic Impact Analysis (TIA) will be required.
    a. Planned Projects:
        i. Only projects included within the Traffic Impact Fee (TIF) calculations or those with 100% defined funding obtained by the City may be assumed as complete in the Horizon Year.
            1. 172nd ST NE & 19th Ave NE Roundabout:
                a. While improvement project is required as mitigation for the Lodge V and English Crossing Developments, it shall not be assumed that either is constructed in the Horizon Year analysis as developments cannot be assured to move forward.
            2. 172nd ST NE & 11th Ave NE Roundabout:
                a. Project is not within TIF calculation thus cannot be assumed as completed in Horizon Year.
                b. Gemmer Development is almost certainly going to be required to construct Roundabout to mitigate for Traffic impacts.
                c. Addition to 6-year TIP does not enable credit towards traffic impact fees. Only
    b. Pipeline Traffic Data:
        i. Per email communication with the developments Traffic Engineer in April, an updated TIA Addendum shall be required to consider a 2% growth plus pipeline data at the intersection of 172nd ST NE (SR 531) & 27th Ave NE.
        ii. Development Pipeline Data has been provided.
        iii. Intersection Mitigation shall be required under the following scenarios:

1. Intersection LOS criteria is not met with or without development traffic in either the Opening and/or Horizon Years.
2. Intersection LOS Criteria is not met with or without development traffic in the Horizon Year and the “with development” scenario increases the intersection delay as determined by the TIA.

Roundabout designs are in progress.

3) Traffic Impact Fee (TIF) Calculation: a. 2024 Transportation Comprehensive Plan Update is ongoing and includes a reevaluation of the TIF.
   i. When adopted the TIF amount and projects included within the calculations may change.
   ii. Adoption is not anticipated until the end of 2024.
   iii. Concurrency/SEPA will be based upon the TIF amount and projects included within the calculation at time of concurrency.

Impact Fee should Vest to the Application date, not time of concurrency.

4) Frontage improvements:
   a. 11th Ave NE:
      i. Roadway shall be per EDDS Standard Plan for 50' ROW residential roadway with 28' of asphalt width including curb/gutter, landscape strip, sidewalk and street lighting.
         1. Identify minimum/maximum width for added pavement upon roadway cross-section.

Ultimate pavement width measured from centerline.

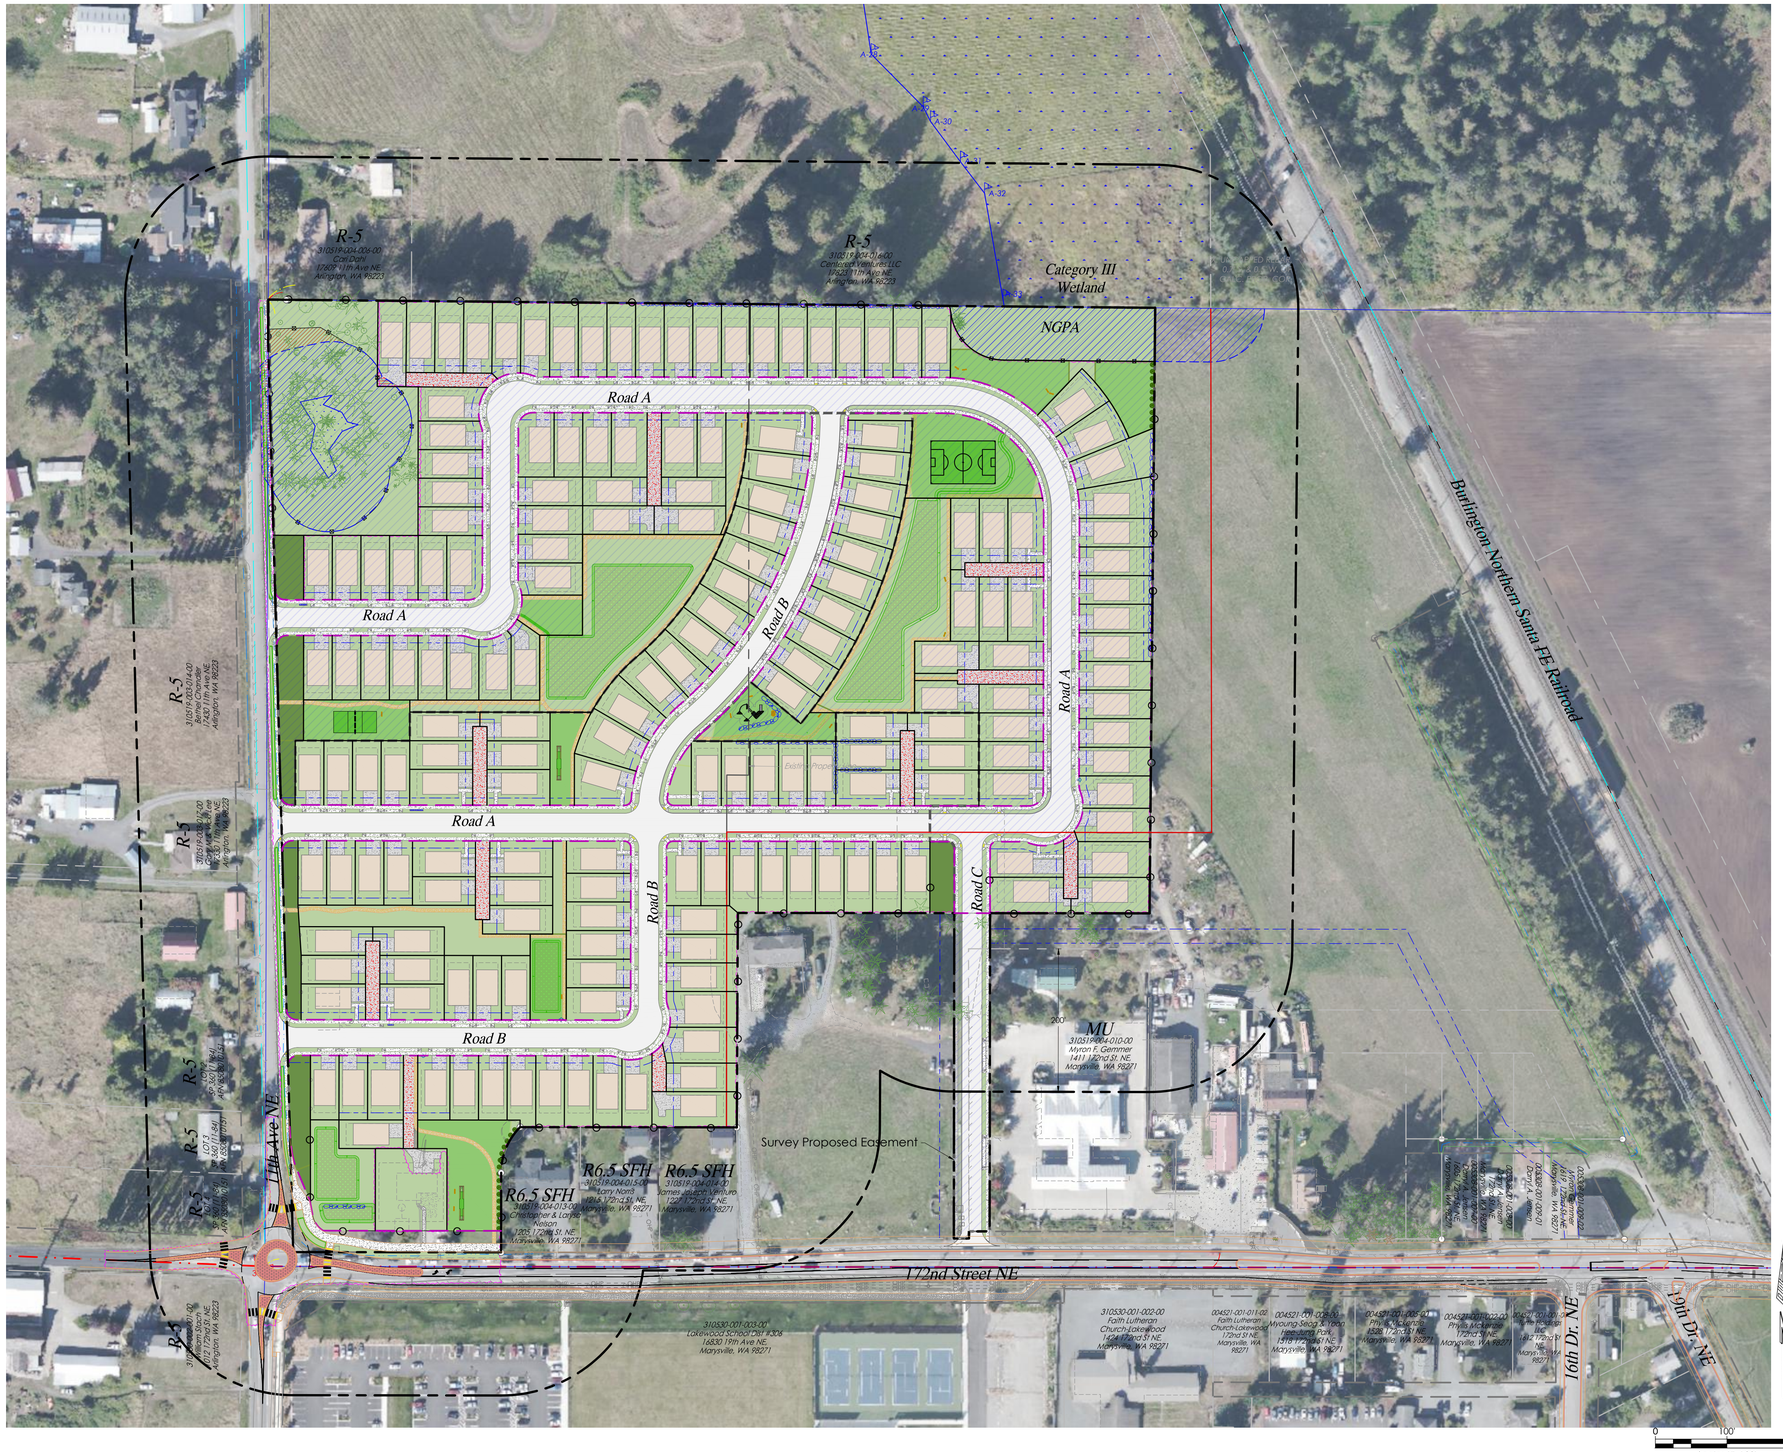
   b. 172nd ST NE:
      i. Roadway shall be per EDDS Standard Plan 3-201-005 with three lanes including curb/gutter, landscape strip, 12' multi-use paths on both sides and street lighting.
   c. 172nd ST NE & 11th Ave NE Roundabout: i. Comp Plan calls for a four leg single-lane roundabout at this location.
      ii. Development shall be required to provide preliminary design of the roundabout in order to determine footprint and thus necessary ROW for full construction.
         1. Adjacent Property owners and Snohomish County should be contacted in regards to ROW procurement.
      iii. Development shall be required to construct roundabout as TIA shows LOS failure in Horizon Year.
         1. Roundabout construction is not a TIF listed project.
   d. 172nd ST NE & 19th Ave NE Roundabout:
      i. Comp Plan calls for a four leg multiple (east of 19th Ave NE)/single (west of 19th Ave NE)-lane roundabout at this location.
      ii. Development shall be required to construct roundabout if other developments required to construct roundabout do not construct prior to the Gemmer Development as TIA shows LOS failure in Horizon Year.
         1. Roundabout construction is not a TIF listed project.

Roundabout designs are in progress.

5) Per EDDS 3-506, street lighting will be required upon all public street frontages as part of civil construction plans. a. Street lighting on 172nd ST NE shall be required as decorative style
street light assemblies with LED fixtures to match existing fixtures on each street.
i. 172th ST NE shall be designed as Principal Arterial/Commercial.
ii. Fixtures would be Lumec Renaissance Series per to be provided City Specification.
1. Specification should be requested via emailed to ihannahs@marysvillewa.gov
2. PUD street lighting shall not be installed in Lakewood area upon arterial or connector roadways.
iii. Lighting design shall incorporate fixture wattage to match those already installed upon each respective roadway.
iv. Photometric layouts shall be required for design with photometrics consisting of staggered lighting on both sides of each roadway and development to install only street lighting on frontage side of each roadway.

Lighting Design will be provided with Construction Plans.

b. Street Lighting upon residential streets of 11th Ave NE and all internal roadways shall be PUD installed fiberglass pole installation type street lighting.
i. Street shall be designed as collector arterial utilizing 100 watt equivalent LED fixtures.
ii. Spacing of fixtures should be approximately 180'-220'.
iii. As part of civil construction approval proposed PUD street lighting locations shall be provided by the City for inclusion within the PUD site electrical plans for City review.
iv. Contact Eddie Haugen of Snohomish County PUD at (425) 7838276 or wehaugen@snopud.com for more information regarding PUD street lighting.



6) Driveway placement:
a. To the extent feasible, driveways shall be staggered, not opposing each other.
i. Opposing driveways result in parking occurring at the same location on both side of the street with challenges then being placed upon emergency vehicles and sanitation and thus citizen unhappiness with requests for parking to be restricted to one side only which is not desirable for citizens or maintenance purposes.

Isn't this opposite of previous direction given to us by the City?
Driveways will be staggered to maximum extent feasible.

7) Channelization and Signing Plan shall be required as part of civil construction plans for all public roadways.
a. Stop sign and stop bar shall be signed upon all approaches to an arterial such as 172nd ST NE.
b. Street name signs shall be installed at all intersections or locations where street names change such as 90 degree turns.
c. 25 mph speed limit signs shall be installed at all entry points from an arterial or a roadway with a different speed limit.

d. Parking restrictions shall be placed on the outside of all 90 degree turns, 10-15' to either side, as sanitation has challenges with garbage pickup when parking occurs near curve bulb outs.

Channelization Plans will be provided.

Total deduction (Using 20% road deduction)	256,792 sf	(5.90 ac)
Net Project Area	**1,027,169 sf**	**(23.58 ac)**
Zoning Multiplier		6.5
Net project area percentage	80%	
Maximum yield (Standard)		**153**

RESIDENTIAL BONUS INCENTIVES (MMC 22C.090)

	Benefit	Density incentive	Provided	Bonus yield
3	**Community image and identity**			
3a.	Contribution towards an identified capital improvement project, including, but not limited to, parks, roadways, bicycle facilities, pedestrian facilities, multi-use trails, gateway sign, etc.	$25,000 per bonus unit. Bonus units may only be claimed in whole numbers or 0.5 bonus unit increments.	0	0.0
5	**Locational/mixed use**			
5a.	a. Developments located within one-quarter mile of transit routes, and within one mile of fire and police stations, medical, shopping, and other community services.	5 percent increase above the base density of the zone		7.7
6	**Storm drainage facilities Dual use retention/detention facilities**			
6a.	Developments that incorporate active recreation facilities that utilize the storm water facility tract.	5 bonus units per acre of the storm water facility tract used for active recreation.	0.36 ac	1.8
6b.	Developments that incorporate passive recreation facilities that utilize the storm water facility tract.	2 bonus units per acre of the storm water facility tract used for passive recreation.	2.75 ac	5.5
7	**Project design**			
7c.	Installation of perimeter fencing or landscaping, in order to improve design or compatibility between neighboring land uses. This benefit shall not be pursued when any of the following circumstances apply: (i) fencing or landscaping is otherwise required by code, or (ii) landscaping is voluntarily provided in order to deviate from other code requirements.	1 bonus unit per 500 lineal feet of perimeter fencing or landscaping installed (when not otherwise required by code).	3,941 lf	7.9
7e.	Private park and open space facilities integrated into project design	5 bonus units per improved acre of park and open space area. Ongoing facility maintenance provisions are required as part of RDI approval.	3.34 ac	16.71
7f.	Enhanced entry landscaping	1 bonus unit per 2,500 square feet of additional enhanced entry landscaped area (when not otherwise required by code). A minimum of 1,000 square feet of entry landscaping of exceptional, outstanding or unique design, as determined by the director, must be provided in order to qualify for this benefit.	3,395 sf	1.4
			Total bonus	40.9
			Max bonus (20% Base)	30.7
			Base density	153
			Total yield	**183**

OPEN SPACE ANALYSIS

Net project area		1,027,169 sf	(23.58 ac)
Minimum open space (OS) required	15.0%	154,075 sf	(3.54 ac)
Minimum active open space	35% of Required OS	53,926 sf	(1.24 ac)
Open space provided (NOTE:Area of tracts less than 30' are not counted here.)			
Tract 999 - Wetland buffer and open space passive		61,074 sf	(1.40 ac)
Tract 998 - Open space passive recreation and SWM		37,807 sf	(0.87 ac)

OPEN SPACE, PASSIVE

An open space area that does not qualify as active open space but may be used for less intense uses such as walking, hiking, biking, picnicking, nature walks, and observation, or reserved in a natural or landscaped state.

SITE AREA ANALYSIS

Gross site area	1,283,961 sf	(29.48 ac)
Area in ROW	238,526 sf	(5.48 ac)
Area in lots	734,466 sf	(16.86 ac)
Area in tracts	310,968 sf	(7.14 ac)
Total	**1,283,961 sf**	**(29.48 ac)**

IMPERVIOUS AREAS

Existing road area	*0 sf*	*(0.00 ac)*
Existing driveway area	*3,313 sf*	*(0.08 ac)*
Existing roof area	*12,501 sf*	*(0.29 ac)*
New road pavement area onsite	130,525 sf	(3.00 ac)
New road pavement area offsite	9,389 sf	(0.22 ac)
New driveway area	106,036 sf	(2.43 ac)
New roof area	401,843 sf	(9.23 ac)
New sidewalk area onsite	66,525 sf	(1.53 ac)
New sidewalk area offsite	9,784 sf	(0.22 ac)
Total impervious area onsite	704,928 sf	(16.18 ac)
Total impervious area	724,101 sf	(16.62 ac)

VEGETATIVE ANALYSIS

EXISTING		
Forested areas	*1,268,147 sf*	*(29.11 ac)*
Building & Gravel areas	*15,814 sf*	*(0.36 ac)*
PROPOSED		
Landscaped areas	579,032 sf	(13.29 ac)
Building & Driveway areas	507,879 sf	(11.66 ac)
Road & Sidewalk areas	197,050 sf	(4.52 ac)
Total site area	1,283,961 sf	(29.48 ac)

SLOPE ANALYSIS

Slopes vary across the site, with the steepest slopes (up to 10%) in the northeast portion of the site. Slopes typically range from 0 to 10%. Average slope is 3.89%. Site slopes generally downward from the west to east.

There are no indications of unstable slopes on the site.

Slope analysis based on T.I.N. triangle slopes of the LiDAR surface:

Range	Area (sf)
0% - 5%	1,038,085 sf
5% - 10%	252,507 sf
10% - 15%	0 sf
15% - 33%	0 sf
33% +	0 sf
Total =	1,283,961 sf (29.48 ac)

ZONING NOTES R-6.5 (PRD)

Density: Dwelling units/acre	6.5 du/acre
Minimum Street Setback	10 feet
Minimum Side Yard Setback	5 feet
Minimum Rear Yard Setback	10 feet
Minimum Lot Width	30 feet
Base Height	30 feet
Maximum Lot Coverage	70%
Minimum Lot Size	3,500 sf
Minimum Driveway Length	20 feet
Maximum Driveway Width	30% Roadway Frontage

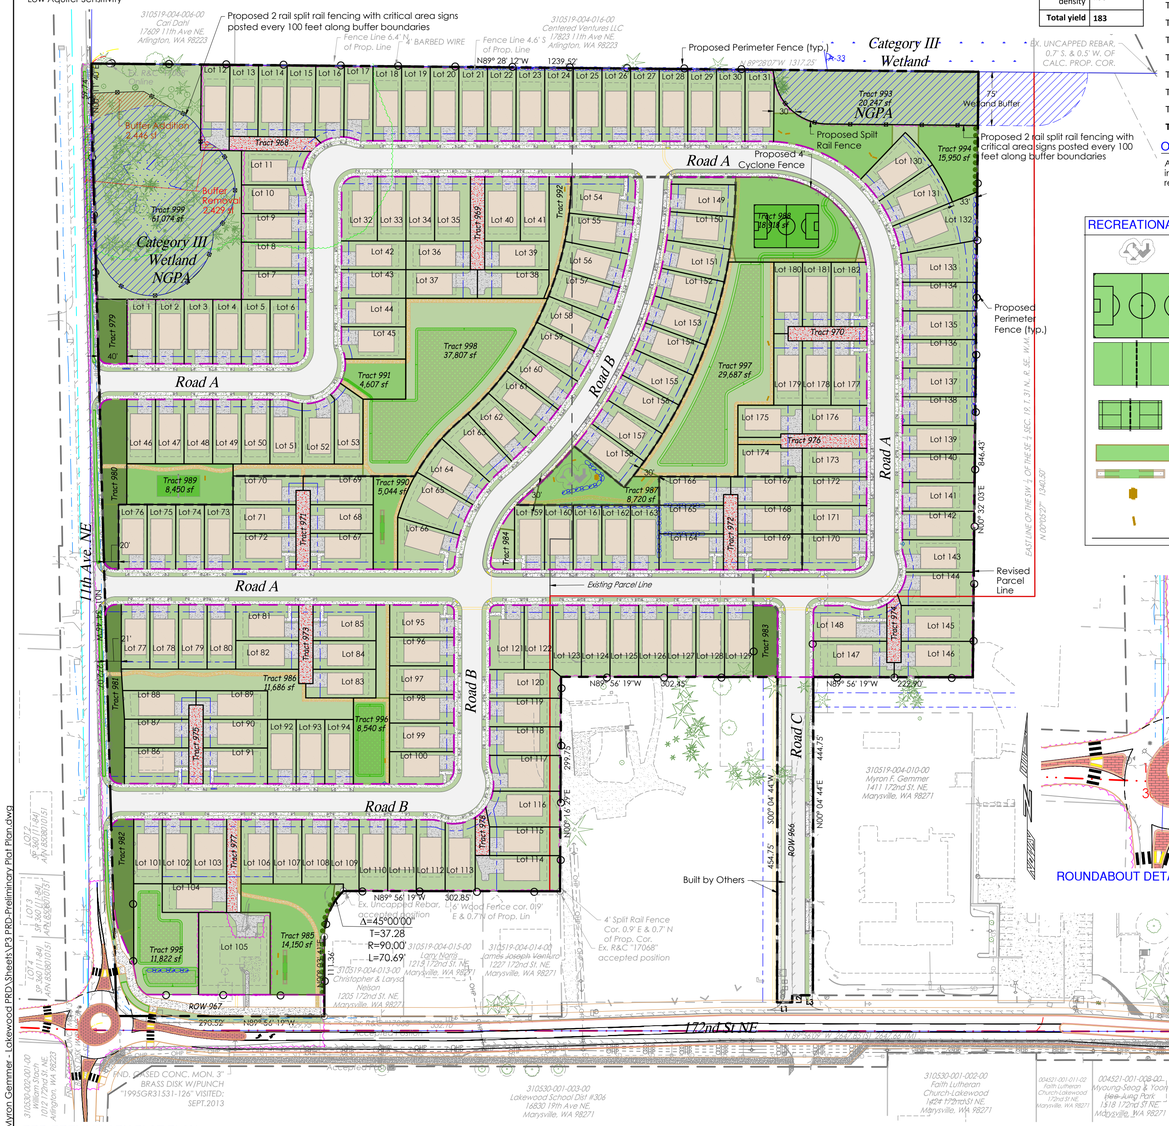
STATEMENT OF INTENT

It is the Applicants intent to Subdivide the property into Fee Simple lots for Detached Single Family homes

LOTS NOTE

All lots under 5,000 square feet are subject to the *Small lot single family dwelling development standards* set forth in MMC 22C.010.310.

HOUSING MIX RATIO



Proposal - 100% Single Family Detached Homes

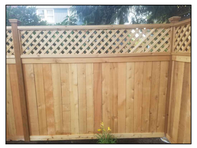
large Open Active Surface Biocell suitable for many lawn sports such as Bocce Ball, Croquet, or many net sports also. This area is grass even for, Biddy Soccer, Whiffle Ball or even Flag football. The active surface has been properly seeded with Microclover.

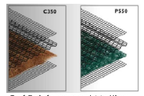


Family playing Volleyball on Thanksgiving at one of our Biocells with surface prepared for Active Use. Numerous net sports can be played in these open grass activity areas.

This active surface was split with Horseshoe Pits and Landscape area. Other lawn sports are an option for this site also.

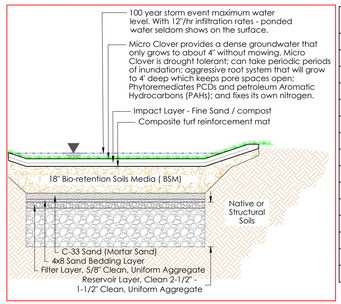
Some Field Sports: Family Soccer, Flag Football, Kick Ball, Dodge Ball and Whiffle Ball

Fences along lots that back up to Open Space will have 3 to 4 feet of solid board with 2 to 3 feet of open lattice above the solid fence. This is to allow for surveillance of Open Space Residents in the Community. Examples shown are concept, specifications will come with Engineering Plan submittals.



ACTIVE OPEN SPACE REQUIRED **1.24 Acres = 5-1/4 Acres**

Requires: 5 Large Recreational Amenities and 10 Small Recreational Amenities.
Providing: 8 Large Recreational Amenities and 12 Small Recreational Amenities.



1 - Large Reinforced Grass Turf areas for multi-sport type activities.
1 - Grass Reinforced Soccer Field
1 - Grass Reinforced Volley Ball Court
1 - Grass Reinforced Badminton Court
2 - Bocce Ball / Lawn Bowling Lanes
1 - Horseshoe Pit
1 - Large Play Equipment
11 - Commercial-grade Benches
1 - Picnic Table

NOTE:
9. Pursuant to MMC 22G.080.100(4)(e), open space shall include a minimum of one large recreational amenity or two small recreational amenities per one-quarter acre of active recreation space. Small recreational amenities include commercial-grade benches, picnic tables, small play equipment, and similar amenities. Large recreational amenities include commercial-grade half sport courts, large play equipment, gazebos, and similar amenities. Please provide the total number of large and small amenities to be provided.

Turf Reinforcement Matting VmaxP550 or C350 based on anticipated use.

ADDED SURFACING FOR ACTIVE USE BIOCELLS

Amenity points provided	Amenity quantity	Amenities provided	Amenity points
Small amenities			
Net sport courts	3	3	
Benches	10	5	
Picnic table	1	1	
Horseshoe pits	2	2	
Bocce ball court	1	1	
Total small amenities		12	6 Amenity points
Large amenities			
Soccer/football field	1	1	
Tot lot	1	1	
Total large amenities		2	2 Amenity points
Total amenity points provided			**8 Amenity points**
Amenity points required			**7 Amenity points**
Total active open space provided		1.60 ac	6 (1/4 acre Amenities)

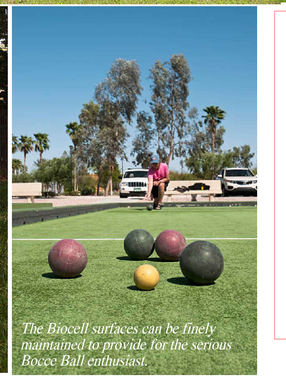
Family Playing badminton on Grass " Court" similar to proposed uses of the Biocells.

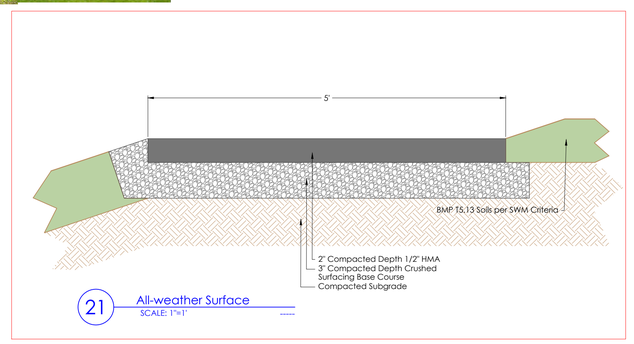
OPEN SPACE & LANDSCAPE CONCEPT PLAN

Volley Ball Grass " Court" similar to proposed uses of the Biocells.

Kids playing Crossnet -4 on Grass " Court" as another option for our athletic prepared surfaces for our Bio-cells.

"Serious" Croquet players as an option for our Biocell surfaces.





Family Fun Croquet players as an option for our biocell surfaces.

Family Playing Bocce Ball on Open Grass Area

The Biocell surfaces can be finely maintained to provide for the serious Bocce Ball enthusiast.

GAMES AND ACTIVITIES THAT CAN BE PLAYED ON OPEN GRASS AREAS.

Net Sports *from Badminton to Volley Ball (Crossnet 4 Square—unique four "team" court. Spike Ball*
Soccer *—Biddy Soccer—Family Soccer*
Mini Field Hockey
Kickball
Dodgeball
Kick Pool *—like pool but on grass with numbered balls and kicking the cue ball to a "pocket"*
Crochet *—traditional or a "pool table" version as in Kick Pool*
Bocce Ball *now becoming popular along with* ***Lawn Bowling***
Frisbee *—Kan Jam*
Tag Games *—capture the flag, kick the can, Red Rover*
Whiffle Ball
Horseshoes *with formal sand pit or Rubber Horseshoe set made for lawns*
Cornhole *—for some reason, in spite of the name, this has become a popular outdoor activity*
Yard Dice Games
Kubb *—lawn game combo like horseshoes-lawn bowling-Chess for singles or family play.*
Molkky *—version of "bowling" using a wooden pin to knock over numbered wooden pins to reach a score*
Lawn Darts *(safety tips)*
Untold others

SURFACES AVAILABLE FOR PLAY:
As a stormwater management facility, the question often comes up about availability of the Active Use Areas during rainy seasons. The "Biocell" component primarily provides treatment of stormwater by infiltrating water through filter medium which includes 6 layers totaling about 28 inches. Ponded water for detention or surcharge for infiltration is held in the Washed Ballast or rock chamber. Infiltration rates through the Biocell is typically 12 inches per hour so water discharged to the surface is quickly infiltrated to the rock chamber below. In twelve years of designing these facilities, I have not seen water ponded on the surfaces during the winter - wet surfaces would never be an issue. These surfaces, during heavy rains, are designed for wet weather and would be more usable than most playfields during heavy rain events.
When it is raining "that" hard - most people would not be looking to be playing on any field outside.

RESIDENTIAL BONUS INCENTIVES (MMC 22C.090)

	Benefit	Density Incentive	Provided	Bonus Yield
5	**Locational/Mixed Use**			
5a.	a. Developments located within one-quarter mile of transit routes, and within one mile of fire and police stations, medical, shopping, and other community services.	5 percent increase above the base density of the zone	85	4.2
6	**Storm Drainage Facilities** **Dual use retention/detention facilities**			
6a.	Developments that incorporate active recreation facilities that utilize the storm water facility tract.	5 bonus units per acre of the storm water facility tract used for active recreation.	0.15 ac	0.8
6b.	Developments that incorporate passive recreation facilities that utilize the storm water facility tract.	2 bonus units per acre of the storm water facility tract used for passive recreation.	2.66 ac	5.3
7	**Project Design**			
7c.	Installation of perimeter fencing or landscaping, in order to improve design or compatibility between neighboring land uses. This benefit shall not be pursued when any of the following circumstances apply: (i) fencing or landscaping is otherwise required by code, or (ii) landscaping is voluntarily provided in order to deviate from other code requirements.	1 bonus unit per 500 lineal feet of perimeter fencing or landscaping installed (when not otherwise required by code).	2,409 lf	4.8
7f.	Enhanced entry landscaping	1 bonus unit per 2,500 square feet of additional enhanced entry landscaped area (when not otherwise required by code). A minimum of 1,000 square feet of entry landscaping of exceptional, outstanding or unique design, as determined by the director, must be provided in order to qualify for this benefit.	sf	0.0
			Total Bonus	15.1
			Max Bonus (20% Base)	16.9
			Base Density	85
			Total Yield	**99**

CIVIL SITE PLAN OVERVIEW

SLOPE ANALYSIS

Slopes vary across the site. Slopes typically range from flat to 5%. Average slope is 3.89%. Site slopes generally downward from the Center to West and East.

There are no indications of unstable slopes on the site.

Slope analysis based on T.I.N. triangle slopes of the LiDAR surface:

Range	Area (sf)
0% - 5%	1,283,961 sf
5% - 10%	0 sf
10% - 15%	0 sf
15% - 33%	0 sf
33% +	0 sf
Total =	1,283,961 sf (29.48 ac)

AQUIFER RECHARGE/ WELL HEAD PROTECTION

Low Aquifer Sensitivity

SOILS

Alderwood Gravelly Sandy Loam;
Hydrologic Soil Group: B
Compact Fill Area to 95% Modified Proctor

UTILITIES NOTE

All power lines, telephone wires, television cables, fire alarm systems and other communication wires, cables or lines shall be placed underground either by direct burial or by means of conduit or ducts providing service to each building.
Any existing on-site septic systems or wells shall be abandoned in accordance with Snohomish Health District requirements.

GENERAL NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities. The contractor shall verify the location of all existing utilities prior to any construction. Agencies shall be notified within a reasonable time prior to the start of construction.

LEGAL DESCRIPTION

PARCEL A OF CITY OF MARYSVILLE BOUNDARY LINE ADJUSTMENT BLA22-006 RECORDED UNDER AUDITOR'S FILE NO. 202301195003, RECORDS OF SNOHOMISH COUNTY, WASHINGTON, MORE PARTICULARLY DESCRIBED AS FOLLOWS:
PARCEL A, AS DELINEATED ON THAT SURVEY RECORDED UNDER AUDITOR'S FILE NO. 200409245129, RECORDS OF SNOHOMISH COUNTY, WASHINGTON;
TOGETHER WITH THAT PORTION OF PARCEL B, CITY OF MARYSVILLE BOUNDARY LINE ADJUSTMENT NO. BLA 06-004 RECORDED UNDER AUDITOR'S FILE NO. 200701125006, RECORDS OF SNOHOMISH COUNTY, WASHINGTON, LYING WEST OF THE FOLLOWING DESCRIBED LINE;
COMMENCING AT THE SOUTH QUARTER CORNER OF SECTION 19, TOWNSHIP 31 NORTH, RANGE 5 EAST, W.M.;
THENCE SOUTH 89°56'19" EAST, ALONG THE SOUTH LINE OF SAID SECTION, 662.05 FEET;
THENCE NORTH 00°47'10" WEST, 20.01 FEET TO THE SOUTHWESTERLY CORNER OF SAID PARCEL B;
THENCE CONTINUING NORTH 00°47'10" WEST, ALONG THE WESTERLY LINE OF SAID PARCEL B, 175.02 FEET TO AN ANGLE POINT ALONG SAID WESTERLY LINE AND THE POINT OF BEGINNING OF THE HEREIN DESCRIBED LINE; THENCE NORTH 00°16'29" EAST 299.75 FEET TO THE NORTH LINE OF THE SOUTH 494.75 FEET OF SAID SECTION;
THENCE SOUTH 89°56'19" EAST, ALONG SAID NORTH LINE, 575.35 FEET TO A POINT THAT BEARS NORTH 00°32'03" EAST FROM THE NORTHEAST CORNER OF PARCEL A OF SAID BOUNDARY LINE ADJUSTMENT;
THENCE NORTH 00°32'03" EAST 846.43 FEET TO THE NORTH LINE OF SAID PARCEL B AND THE TERMINUS OF SAID DESCRIBED LINE;
EXCEPT THAT PORTION THEREOF CONVEYED TO CITY OF MARYSVILLE BY DEED RECORDED UNDER AUDITOR'S FILE NO. 200805190267, RECORDS OF SNOHOMISH COUNTY, WASHINGTON;
SITUATE IN THE COUNTY OF SNOHOMISH, STATE OF WASHINGTON.

RESTRICTIONS

1. THIS SITE IS SUBJECT TO AN EASEMENT FOR ELECTRIC TRANSMISSION AND/OR DISTRIBUTION SYSTEM, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 464421.(SURVEYOR'S NOTE: NOT PLOTTED; OVER THE RIGHT-OF-WAY FOR 11TH AVENUE NW)
2. THIS SITE IS SUBJECT TO RIGHTS OF THE PUBLIC TO MAKE NECESSARY SLOPES FOR CUTS OR FILLS, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 1847825.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)
3. THIS SITE IS SUBJECT TO RIGHTS OF THE PUBLIC TO MAKE NECESSARY SLOPES FOR CUTS OR FILLS, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 1870393.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)
7. THIS SITE IS SUBJECT TO TERMS, CONDITIONS AND PROVISIONS OF A RESTRICTIVE COVENANT FOR ALTERNATIVE ON-SITE SEWAGE SYSTEM, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 9102260469.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)
8. THIS SITE IS SUBJECT TO AN EASEMENT FOR ELECTRIC TRANSMISSION AND/OR DISTRIBUTION LINE, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 9305240146.(SURVEYOR'S NOTE: NOT PLOTTED; OVER CONSTRUCTED LINE)
9. THIS SITE IS SUBJECT TO ANY RIGHTS, INTERESTS OR CLAIMS WHICH MAY EXIST OR ARISE BY REASON OF MATTERS DISCLOSED BY SURVEY RECORDED UNDER AUDITOR'S FILE NO. 9309275016, BEING A FENCE ENCROACHMENT ALONG EASTERLY PORTION NEAR THE SOUTH LINE OF SAID PREMISES.(SURVEYOR'S NOTE: NOT PLOTTED; FENCE AS SHOWN ON SAID SURVEY IS NOT ADJACENT TO THIS PROPERTY)
10. THIS SITE IS SUBJECT TO AN EASEMENT FOR ELECTRIC TRANSMISSION AND/OR DISTRIBUTION LINE, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 9711140354, REPLACING AUDITOR'S FILE NO. 1836571.(SURVEYOR'S NOTE: NOT PLOTTED; OVER NEIGHBORING PARCEL TO THE EAST)
11. THIS SITE IS SUBJECT TO ANY RIGHTS, INTERESTS OR CLAIMS WHICH MAY EXIST OR ARISE BY REASON OF MATTERS DISCLOSED BY SURVEY RECORDED UNDER AUDITOR'S FILE NO. 200003205004, BEING A FENCE ENCROACHMENT ALONG NORTH LINE OF SAID PREMISES.(SURVEYOR'S NOTE: NOT PLOTTED; FENCE NO LONGER STANDING)
12. THIS SITE IS SUBJECT TO COVENANTS, CONDITIONS, RESTRICTIONS, RECITALS, RESERVATIONS, EASEMENTS, EASEMENT PROVISIONS, DEDICATIONS, BUILDING SETBACK LINES, NOTES, STATEMENTS, AND OTHER MATTERS, IF ANY, AS SET FORTH ON BOUNDARY LINE ADJUSTMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 200409245129.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)
13. THIS SITE IS SUBJECT TO TERMS, COVENANTS AND PROVISIONS OF CITY OF MARYSVILLE RECOVERY CONTRACT NO. 271, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 200610260422.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)
14. THIS SITE IS SUBJECT TO COVENANTS, CONDITIONS, RESTRICTIONS, RECITALS, RESERVATIONS, EASEMENTS, EASEMENT PROVISIONS, DEDICATIONS, BUILDING SETBACK LINES, NOTES, STATEMENTS, AND OTHER MATTERS, IF ANY, AS SET FORTH ON BOUNDARY LINE ADJUSTMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 200701125006.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)
15. THIS SITE IS SUBJECT TO AN EASEMENT FOR ELECTRIC TRANSMISSION AND/OR TELECOM DISTRIBUTION SYSTEMS, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 200712040482.(SURVEYOR'S NOTE: NOT PLOTTED; OVER LINES AS CONSTRUCTED; NO EVIDENCE OF LINES OVER SUBJECT PROPERTY)
16. THIS SITE IS SUBJECT TO AN EASEMENT FOR SEPTIC SYSTEM, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 200807310560.(SURVEYOR'S NOTE: PLOTTED)
17. THIS SITE IS SUBJECT TO TERMS, COVENANTS AND PROVISIONS OF A RIGHT TO FARM, AS DISCLOSED BY INSTRUMENT RECORDED UNDER SNOHOMISH COUNTY AUDITOR'S FILE NO. 201201090348.(SURVEYOR'S NOTE: NOT PLOTTED; BLANKET IN NATURE)

GENERAL NOTES

1. PRECISION OF CONTROL TRAVERSE IS AT HIGHER LEVEL THAN MINIMUM STANDARDS REQUIRED BY WAC 332-130-090.
2. FIELD SURVEY CONDUCTED USING A COMBINATION OF GPS USING THE WASHINGTON STATE REFERENCE NETWORK (WSRN) AND/OR A 3 SECOND DIRECT READING TOTAL STATION. METHOD: GPS, TRAVERSE AND RADIAL SURVEY.
3. ALL DISTANCES ARE IN FEET.

THIS SURVEY REPRESENTS VISIBLE PHYSICAL IMPROVEMENT CONDITIONS EXISTING ON NOVEMBER 2023. ALL SURVEY CONTROL INDICATED AS "FOUND" WAS RECOVERED FOR THIS PROJECT IN NOVEMBER OF 2020.

REFERENCES

RECORD OF SURVEY PERFORMED BY SNOHOMISH COUNTY DEPARTMENT OF PUBLIC PUBLIC WORKS, RECORDED UNDER AUDITOR FILE NO. 201112195001.

SURVEYOR'S NOTE

PER REFERENCE 1, NORTH PEAK ASSOCIATES LLC HAS HELD THE 1964 FOUND AND ACCEPTED CENTER OF SECTION FOR THE LOCATION OF THE RIGHT-OF-WAY OF 11TH AVENUE NE. THE THEORETICAL CENTER OF SECTION WAS USED FOR THE CALCULATION OF THE NORTH, EAST, AND SOUTH PROPERTY LINES.

UTILITIES NOTE

All power lines, telephone wires, television cables, fire alarm systems and other communication wires, cables or lines shall be placed underground either by direct burial or by means of conduit or ducts providing service to each building.
Any existing on-site septic systems or wells shall be abandoned in accordance with Snohomish District requirements.

GENERAL NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities. The contractor shall verify the location of all existing utilities prior to any construction. Agencies shall be notified within a reasonable time prior to the start of construction.

SEWER SYSTEM NOTES

1. Sanitary sewer pipe and side sewers shall be 10 feet away from building foundations and/or roof lines.
2. No side sewers shall be connected to any house or building until all manholes are adjusted to the finished grade of the completed asphalt roadway and the asphalt patch and seal around the ring are accepted.
3. After all other utilities are installed and prior to asphalt work, all sanitary pipes shall pass a low pressure air test in accordance with Section 7-17 of the "Standard Specifications". Products used to seal the inside of the pipe are not to be used to obtain the air test.
4. For commercial developments in which sources of grease and/or oils may be introduced to the City sanitary sewer system, a City approved grease interceptor shall be installed downstream from the source.
5. The City of Marysville Community Development Department shall be notified a minimum of 48 hours in advance of a tap or connection to an existing sanitary sewer main. The inspector shall be present at the time of the tap or connection.
6. The Contractor shall be fully responsible for the location and protection of all existing utilities. The Contractor shall verify all utility locations prior to construction by calling the Underground Locate Line at 1-800-424-5555 a minimum of 48 hours prior to any excavation.
7. Gravity sewer main with ::5' of cover shall be D.I.P. Class 52; 5'-18' of cover shall be PVC, ASTM D 3034 SDR 35, or ASTM F 789 with joints and rubber gaskets conforming to ASTM D 3212 and ASTM F 477; ::18' cover shall be D.I.P. Class 52, or C-900.
8. Precast manholes shall meet the requirements of ASTM C 478. Manholes shall be Type 1-48" manhole unless otherwise specified on the plans. Joints shall be rubber gasketed conforming to ASTM C 443 and shall be grouted from the inside. Lift holes shall be grouted from the outside and inside of the manhole.
9. Side sewer services shall be PVC, ASTM D 3034 SDR 35 with flexible gasketed joints. Side sewer connections shall be made by a tap to an existing main or a tee from a new main connected above the springline of the pipe.
10. All sewer mains shall be field staked for grades and alignment prior to construction by a licensed engineer or surveying firm qualified to perform such work. Prior to constructing any sewer, the lot corners shall be staked and sewer line location established by survey. cost of which shall be borne by the Developer.
11. All plastic pipe and services shall be installed with continuous tracer tape installed 12" to 18" under the proposed finished subgrade. The marker shall be plastic non-biodegradable, metal core or backing marked sewer which can be detected by a standard metal detector.
12. Each side sewer lateral shall have a 2" x 4" wood "marker" at the termination of the stub. The "marker" shall extend from the trench to above finished grade. Above the ground surface, it shall be painted "green" with SEWER and the depth, in feet, stenciled in white letters 2" high.
13. Side sewers shall be installed by the Developer and coordinated for clearance with power, telephone, and other utilities.
14. All side sewers to be installed 10 feet into lot served and staked and marked as shown on these plans.
15. Pipe bedding shall be in accordance with WSDOT Standard Plan B-18c Class F. Pea gravel is an acceptable bedding material. All pipe shall be laid on a properly prepared foundation according to Standard Specification 7-02.3(1). This shall include necessary leveling of the trench bottom or the top of the foundation materials as well as placement and compaction of required bedding material to uniform grade so that the entire length of the pipe will be supported an a uniformly dense unyielding base.
16. A 6-foot square X 4-inch thick concrete pad shall be installed around all SSMH'S and a 3-foot square X 4-inch thick concrete pad shall be installed around all cleanouts that are not in a pavement area.
17. All lines shall be cleaned and pressure tested prior to paving in conformance with the above referenced specifications. Testing of the sanitary sewer main shall include TV-ing of the main by the Contractor. Immediately prior to TV-ing, enough water shall be run down the line so it comes out the lower manhole. A copy of the video tape shall be submitted to the City of Marysville. Acceptance of the line will be made after the tape has been reviewed and approved by Public Works. A water test of all manholes in accordance with Marysville standard may also be required. Testing shall take place after all underground utilities are installed and compaction of the roadway subgrade is completed.
18. Prior to backfill all mains and appurtenances shall be inspected and approved by the City of Marysville Department of Public Works. Approval shall not relieve the Contractor for correction of any deficiencies and/or failures as determined by subsequent testing and inspections. It shall be the Contractor's responsibility to notify the City of Marysville for the required inspections

WATER SYSTEM NOTES

1. Biological test samples will be taken by the City (or FMWC, VW or TCW when served by that purveyor) and paid for by the contractor.
2. Water mains shall have a minimum cover of 36 inches in improved right-of-way and a minimum of 48 inches in unimproved right-of-way and easements.
3. Pipe for water mains shall be ductile iron conforming to Section 7-09 of the Standard Specifications, Class 52 with tyton or approved equal joints. Pipe shall be cement lined in accordance with A.S.A. Specification A 21.4-1964.
4. Connections to existing water mains shall typically be wet taps through a tapping 'tee' and tapping valve and shall be made by a City-approved contractor. The tapping sleeve shall be epoxy coated or ductile iron. Stainless sleeves shall only be used on AC pipe. The City (or FMWC, VW or TCW when served by that purveyor) shall approve the time and location for these connections.
5. All water mains and appurtenances shall be hydrostatically tested at 200 psi in accordance with City Standards.
6. Fire hydrants shall be installed in accordance with City Standard Detail 2-060-001 and as directed by the City of Marysville Fire Code Official.
7. Valve marker posts shall be installed where valve boxes are hidden from view or in unpaved areas.
8. Resilient seated wedge gate valves shall be used for 10-inch mains and smaller. Butterfly valves shall be used for mains greater than 10 inches.
9. Pipe fitting for water mains shall be ductile iron and shall be mechanical joint conforming to AWWA Specification C111-72.
10. Water main pipe and service connections shall be a minimum of 10 feet away from building foundations and/or roof lines.
11. Where a water main crosses the Northwest Gas pipeline, the water line shall be cased with PVC pipe a minimum of 10 feet beyond each side of the gas line easement. Contact Williams Northwest Pipeline before the crossing is made.
12. Trenching, bedding, and backfill for water mains shall be installed in accordance with City Standard Detail 3-703-002 and-003.
13. All commercial and industrial developments, irrigation systems, and multi-family water service connections shall be protected by a double check valve assembly or a reduced pressure backflow assembly as directed by the City conforming to City Standard Details 2-153-001.
14. Any lead joint fitting disturbed during construction shall be replaced with a mechanical joint fitting at the contractor's expense.

ARCHAEOLOGICAL RESOURCES NOTE

The Department of Archaeology and Historic Preservation's (DAHP) Inadvertent Discovery Plan shall be followed during site construction. If at any time during construction archaeological resources are observed on the project area, work shall be temporarily suspended at the location of discovery and a professional archaeologist should document and assess the discovery. The DAHP and all concerned tribes should be contacted for any issues involving Native American sites. If project activities expose human remains, either in the form of burials or isolated bones or teeth, or other mortuary items, work in that area should be stopped immediately. Local law enforcement, DAHP, and affected tribes should be immediately contacted. No additional excavation should be undertaken until a process has been agreed upon by these parties, and no exposed human remains should be left unattended.

CONTRACTOR NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities.

CALL AT LEAST 2 BUSINESS DAYS BEFORE YOU DIG 1-800-424-5555

GENERAL NOTES

1. All work in City right-of-way requires a permit from the City of Marysville. Prior to any work commencing, the general contractor shall arrange for a preconstruction meeting at the Development Services Center to be attended by all contractors that will perform work shown on the approved engineering plans, representatives from all applicable utility companies, the project owner and appropriate city staff. Contact Development Services at (360-363-8100) to schedule the meeting. The contractor is responsible to have their own set of approved plans at the meeting.
2. After completion of all items shown on these plans and before acceptance of the project the contractor shall obtain a "punch list" prepared by the City's inspector detailing remaining items of work to be completed. All items of work shown on these plans shall be completed to the satisfaction of the City prior to acceptance of the water, sanitary sewer and storm systems.
3. All materials and workmanship shall conform to the Standard Specifications for Road, Bridge, and Municipal Construction (hereinafter referred to as the "Standard Specifications"), Washington State Department of Transportation and American Public Works Association, Washington State Chapter, latest edition, unless superseded or amended by the City of Marysville City Engineering Design and Development Standards (hereinafter referred to as the "City Standards").
4. All work within the development and City right-of-way shall be subject to the inspection of the City engineer or designated representative.
5. Prior to any site construction including clearing/logging or grading, the site clearing limits shall be located and field identified by the project surveyor (or project engineer) as required by these plans. The project surveyor's name and phone number is Darren Riddle, 425.512.7099.
6. The developer, contractor and project engineer is responsible for water quality as determined by the monitoring program established by the project engineer. The project engineer's name and phone number is Tyler Foster, 360.652.9727.
7. The contractor shall be responsible for obtaining all permits for utility, road, and right-of-way construction. The contractor for this project is _____. Contact person is _____. Phone _____. Mobile phone _____. emergency phone _____.
8. The Construction Stormwater Pollution Prevention Plan (SWPPP) Best Management Practices (BMP's) shall be constructed in accordance with the approved SWPPP prior to any grading or extensive land clearing. These facilities must be satisfactorily maintained until construction and landscaping is completed and final stabilization has occurred. Sediment laden waters shall not enter the city stormwater drainage system or a natural drainage system.
9. The contractor shall keep two sets of plans on site at all times for recording record drawing information; one set shall be submitted to the project engineer, and one set shall be submitted to the City engineer at completion of construction and prior to final acceptance of work.
10. Prior to construction the owner and/or contractor shall notify the project engineer and the City engineer when conflicts exist between the plans and field conditions. Conflicts shall be resolved (including plan and profile revisions) and resubmitted for approval prior to proceeding with construction.
11. Any revisions made to these plans, or changes to the design must be reviewed and approved by the developer's engineer and the City prior to any implementation in the field. The City shall not be responsible for any errors and/or omissions on these plans.
12. The contractor shall have all utilities verified on the ground prior to any construction. Call (811) at least two working days in advance. Prior to construction the owner and/or contractor shall notify the project engineer and the City engineer when conflicts exist between the plans and field conditions. Conflicts shall be resolved (including plan and profile revisions) and resubmitted for approval prior to proceeding with construction.
13. City of Marysville horizontal datum shall be NAD 83, and the vertical datum shall be NAVD 88, in Washington State Plane Coordinates (feet), Washington North Zone 4601. A list of benchmarks is available through the Public Works Department.
14. Temporary street patching shall be allowed for as approved by the City Engineer. Temporary street patching shall be provided by placement and compaction of ATB or Class B asphalt concrete. Contractor shall be responsible for maintenance as required.
15. Provide traffic control plan(s) in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) as required.
16. It shall be the responsibility of the Contractor to have a copy of these approved plans on construction site at all times.
17. Any structure and/or obstruction that requires removal or relocation relating to this project shall be done so at the developer's expense.
18. Locations of existing utilities are approximate. It shall be the contractor's responsibility to determine the true elevations and locations of hidden utilities. All visible items shall be the engineer's responsibility. Location of utilities shown on construction plans are based on best records available and are subject to variation. For assistance in utility location, call 1-800-4245555.
19. The contractor shall install, replace, or relocate all signs, as shown on the plans or as affected by construction, per City Standards.
20. Power, street light, cable, and telephone lines shall be in a trench located within a 10-foot utility easement adjacent to public right-of-way. Right-of-way crossings shall have a minimum horizontal separation from other utilities (sewer, water, and storm) of 5 feet.
21. All construction surveying for extensions of public facilities shall be done under the direction of a Washington State licensed land surveyor or a Washington State licensed professional civil engineer.
22. During construction, all public streets adjacent to this project shall be kept clean of all material deposits resulting from on-site construction, and existing structures shall be protected as directed by the City.
23. Certified record drawings are required prior to project acceptance.
24. A NPDES Stormwater General Permit may be required by the Department of Ecology for this project. For information visit the Department of Ecology web site www.ecy.wa.gov/programs/wq/stormwater/construction/.
25. Any disturbance or damage to Critical Areas and associated buffers, or significant trees designated for preservation and protection shall be mitigated in accordance with a Mitigation Plan reviewed and approved by the City's Planning Division. Preparation and implementation of the Mitigation Plan shall be at the developer's expense.
26. A grading permit issued pursuant to the current adopted International Building Code, and approval of the temporary erosion and sedimentation control plan shall be obtained from the Community Development Department prior to any on-site grading work not expressly exempt by the current adopted International Building Code.
27. Prior to commencement of framing, final drainage inspection and approval of the roof leader and positive footing systems shall be completed by the Building Department. Call 360-363-8100 to schedule the inspection.

CONSTRUCTION SEQUENCE

1. Arrange and attend a pre-construction meeting with City staff, the on-site erosion control specialist, the design engineer, and owner.
2. Identify clearing limits and stream/wetland NGPA areas as required with flagging and/or temporary orange construction fence. Wetland buffer marking is to be checked by wetland consultant (or the county) before clearing begins.
3. Install construction zone road signs.
4. Grade and install construction entrance(s).
5. Place silt fence, straw bales, etc. as necessary to prevent sediment-laden runoff from leaving site.
6. Provide protection for existing offsite catch basins and other drainage facilities.
7. Grade and stabilize roads and interceptor swales in conjunction with clearing and grading activity.
8. Install temporary sedimentation measures.
9. Clear and grub site. Complete mass grading. Reconstruct sediment-trapping measures as grading progresses. Relocate surface water controls and erosion control measures, or install new measures as site conditions change so as to maintain compliance with City of Marysville standards.
10. Final grade, construct and pave roadways. Ensure that the permanent drainage system is complete and functional.
11. Remove any temporary sediment controls when permanent drainage is complete and erosion measures are in place and functional. Add topsoil to planting areas. Plant rain gardens and wetland areas in accordance with landscape and wetland mitigation plans.
12. Remove remaining temporary erosion control measures when danger of erosion has passed and site is stabilized with final City approval.

GRADING, EROSION AND SEDIMENTATION CONTROL NOTES

1. All limits of clearing and areas of vegetation preservation as prescribed on the plans shall be clearly flagged in the field and observed during construction.
2. All required sedimentation and erosion control facilities must be constructed and in operation prior to any land clearing and/or other construction to ensure that sediment laden water does not enter the natural drainage system. The contractor shall schedule an inspection of the erosion control facilities prior to any land clearing and/or other construction. All erosion and sediment facilities shall be maintained in a satisfactory condition as determined by the City, until such time that clearing and/or construction is completed and final stabilization has occurred. The implementation, maintenance, replacement and additions to the erosion and sedimentation control systems shall be the responsibility of the permittee.
3. The erosion and sedimentation control system facilities depicted on these plans are intended to be minimum requirements to meet anticipated site conditions. As construction progresses and unexpected or seasonal conditions dictate, facilities will be necessary to ensure complete siltation control on the site. During the course of construction, it shall be the obligation and responsibility of the permittee to address any new conditions that may be created by his activities and to provide additional facilities, over and above the minimum requirements, as may be needed to protect adjacent properties, sensitive areas, natural water courses, and/or storm drainage systems..
4. Approval of these plans is for grading, temporary drainage, erosion and sedimentation control only. It does not constitute an approval of permanent storm drainage design, size or location of pipes, restrictors, channels, or retention facilities.
5. Any disturbed area which has been stripped of vegetation and where no further work is anticipated for the time period set forth by the SWPPP, must be immediately stabilized with mulching, grass planting, or other approved erosions control treatment applicable to the time of year in question. During the dry season (May 1 - September 30) soils may be exposed and unworked for 7 days. During the wet season (October 1 - April 30) soils may be exposed and unworked for 2 days. Grass seeding alone will be acceptable only during the dry season. Seeding may proceed outside the specified time period whenever it is in the interest of the permittee but augmented with mulching, netting, or other treatment approved by the City.
6. In case erosion or sedimentation occurs to adjacent properties, all construction work within the development that will further aggravate the situation must cease, and the owner/contractor will immediately commence restoration methods. Restoration activity will continue until such time as the affected property owner is satisfied.
7. Stockpiles are to be located in safe areas adequately protected by temporary seeding and mulching. Hydroseeding is preferred. No temporary or permanent storage of materials or equipment shall occur within critical areas or associated buffers, or the critical root zone for vegetation proposed for retention.
8. Non-compliance with the requirements for erosion controls, water quality, and clearing limits may result in revocation of project permit, plan approval, and bond foreclosures.
9. All earth work shall be performed in accordance with City Standards. Pre-construction soils investigation may be required to evaluate soils stability.
10. If cut and fill slopes exceed a maximum of two feet horizontal to one foot vertical, a rock or concrete retaining wall may be required. All rock retaining walls greater than four (4) feet in height are to be designed and certified by a professional engineer experienced in soil mechanics.
11. The Surface of all slopes shall be compacted. This may be accomplished by over-building the slopes, then cutting back to final grades; or by compacting each lift as the slope is being constructed. All slopes shall be compacted by the end of each working day.
12. Upon completion of work, final reports must be submitted to the City in conformance with the current City adopted International Building Code.

MAINTENANCE OF SILTATION BARRIERS

1. Siltation barriers shall be inspected immediately after each rainfall and at least daily during prolonged rainfall. Close attention shall be paid to the repair of damaged bales, end runs and undercutting beneath bales. Necessary repairs to barriers or replacement of bales shall be accomplished promptly. Sediment deposits should be removed after each rainfall. Sediment deposits must be removed when sediment level reaches approximately one-half the siltation barrier height. Any sediment deposits remaining in place after the straw bale barrier is no longer required shall be dressed to conform to the existing grade, prepared and seeded.

TEMPORARY GRAVEL CONSTRUCTION ENTRANCE

1. The temporary construction entrance should be cleared of all vegetation, roots, and other objectionable material. Any drainage facilities required because of washing should be constructed according to specifications in the plan. If wash racks are used, they should be installed according to manufactures specifications.
2. Gravel shall be crushed ballast rock, 8" to 12" in depth and installed to the specified dimensions at the entrance.
3. The gravel ballast rock shall be 4" to 8" in diameter and placed across the full width of the vehicular ingress and egress area. The length of entrance shall be a minimum of 100 feet.
4. If conditions on the site are such that most of the mud is not removed from vehicle tires by contact with the gravel, then the tires must be washed before vehicles enter onto a public road. Wash water must be carried away from entrance to a settling area to remove sediment. A wash rack may also be used to make washing more convenient and effective.
5. The entrance shall be maintained in a condition which will prevent tracking or flow of mud onto public rights-of-way. This may require periodic top dressing with 2" stone, as conditions demand, and repair and/or clean out any structures used to trap sediment. All materials spilled, dropped, washed or tracked from vehicles onto roadway or into storm drains must be removed immediately.

HYDROSEEDING GENERAL NOTES

1. Construction Acceptance: Will be subject to a well established ground cover that fulfills the requirements of the approved construction plans and City of Marysville Standards.
2. All disturbed areas such as retention facilities, roadway backslopes, etc., shall be seeded with a perennial ground cover grass to minimize erosion. Grass seeding will be done using an approved hydroseeder or as otherwise approved by the City of Marysville.
3. Preparation of Surface: All areas to be seeded shall be prepared in a manner consistent with BMP T5.13 Post Construction Soil Quality and Depth in Chapter 5 of Volume V of the stormwater manual.
4. Immediately following finish grading permanent vegetation shall be applied consistent with the design and maintenance standards for Temporary and Permanent Seeding in the City adopted Department of Ecology Stormwater Management Manual for Western Washington.
5. All hydroseeding firms shall have a printout of the application rate for each job readily available for inspection by the Construction Inspection Division of Community Development.
6. The City of Marysville Construction Inspection Division of Community Development shall be notified of potential hydroseeding prior toe the commencement of same to ensure compliance of these specifications.

ROADWAY NOTES

1. Monuments shall be installed at all street intersections, at angle points, and points of curvature in each street. All boundary monuments must be installed according to the Washington State subdivision laws.
2. Curb and gutter installation shall conform to City Standard Detail 3-514.
3. Sidewalks and driveways shall be installed as lots are built on. Sidewalks and driveways shall conform to City Standard Detail 3-303-001 and -002. If asphalt is damaged during replacement of curb and gutter, the repair shall conform to City Standard Detail 3-514-001.
4. The surrounding ground (5 feet beyond the base) for all power transformers, telephone/TV pedestals, and street light main disconnects shall be graded to a positive 2 percent slope from top of curb.
5. Signage and traffic control devices are safety items and shall be installed prior to issuance of any certificate of occupancy or plat approval. However, in larger developments, exact locations of stop and yield signs may need to be determined after full buildout when traffic patterns have been established. In this case, contractor shall provide indicated "City-placed" signs, signposts, and brackets to the City sign specialist (425) 328-7954 for later installation by the City. All signage shall be in accordance with the Manual on Uniform Traffic Control Devices (MUTCD).
6. Prior to any sign or striping installation or removal the Contractor shall contact the City sign specialist (425) 328-7954 to arrange for an on-site meeting to discuss placement and uniformity.
7. New or revised stop signs or yield signs shall be advance warned using the procedure outlined in the MUTCD. Advance warning signs and flags shall be maintained by installer for 30 days and then removed.

CHANNELIZATION & SIGNING

Approved permanent traffic control signs and markings within the public Right-of-Way (ROW) shall be installed by City forces. The developer shall pay for installation of all devices. The inspector shall notify the Department of Public Works (DPW) Traffic Operations when the project is ready for channelization and signing.

During project construction, the contractor shall provide and maintain all temporary construction signs, traffic control signs, delineators and temporary markings as required. All signs, traffic control signs, delineators and temporary markings shall be according to the current Manual of Uniform Traffic Control Devices (MUTCD).

Access by emergency vehicles shall be maintained at all times during construction.

After work within the traveled roadway is competed at the end of each day, the road shall be clear of debris and equipment and completely open to traffic (unless otherwise approved by the DPW of the City). Lighted barricades or barrels shall delineate all areas within the roadway affected by construction (i.e., edge of pavement, new curb edges not illuminated by street lights).

A ROW use permit is required from the DPW for any lane/road closure within the City ROW. Contact DPW at least 15 days prior to construction activity within the public ROW, City does not have jurisdiction on state routes, roadways within incorporated cities, private roads, or private property. For any activity encroaching on such property, the applicant shall obtain permission from the appropriate authority.

WET WEATHER GRADING NOTES

Grading from October 1 to March 31st is not permitted without specific approval. If permitted, soil may be exposed for not more than two (2) days, if wet weather grading has been permitted by city. From May 1 to September 30, soil shall not be exposed for more than seven (7) days. Ground cover BMPs shall be used to stabilize the soil including but not limited to PVC cover, straw or other BMPs approved by the City.

STORMWATER NOTES

1. During construction, all existing and newly installed drainage structures shall be protected from sediments.
2. All storm manholes shall conform to City Standard Detail No.4-080-009. Flow control manhole/oil water separator shall conform to City Standard Detail No. 4-040-004.
3. Manhole ring and cover shall conform to City Standard Detail 4-080-009 and 4-080-015 thru 4-080-024. The cover shall be marked with "storm" or "drain" in 2-inch raised letters. Minimum weight of the frame shall be 210 pounds. Minimum weight of the cover shall be 150 pounds.
4. Catch basins shall by Type I unless otherwise approved by the City Engineer or Designated representative. Type I Catch basins shall conform to City Standard Detail No.4-080-007 and 4-080-008 and shall be used only for depths less than 5 feet from top of the grate to the invert of the storm pipe.
5. Catch basins Type II shall conform to City Standard Detail No. 4-080-009 and shall be used for depths greater than 5 feet from top of the grate to the invert of the storm pipe.
6. Cast iron or ductile iron frame and grate shall conform to City Standard Detail No.4-080-022. Grate shall be marked with "drains to stream". Solid catch basin lids (square unless noted as round) shall conform to WSDOT Standard Plan B-30.20-02 (Olympic Foundry No. SM60, SM52, or SM44 or equal). Vaned grates shall be required on all storm structures when roadway profile is greater than 3% and shall conform to WSDOT Standard Plan B-30.30-01 (Olympic Foundry No. SM60V or equal). Grates located in the gutter flow line shall be depressed 0.1 feet below pavement level.
7. All catch basins and manholes located outside of paved areas, shall be placed in a six foot square by four inch thick concrete pad.
8. All catch basins and manholes shall have locking lids. Rolled grates are not approved for use outside of the City right-of-way or for use with Type II manholes.
9. Contractor shall be responsible for adjusting all manhole, inlet and catch basin frames and grates to grade just prior to curb installation and/or paving.
10. Trenching, bedding, and backfill for pipe shall conform to City Standard Detail No. 3-703-002 and-003.
11. Trench backfill of new utilities and stormwater drainage system features shall be compacted to 95% maximum density (modified proctor) under roadways and 90% maximum density (modified proctor) off roadways. Compaction shall be performed in accordance with Section 7-08.3(3) and 2-03.3(14)C - Method B as defined in the current edition of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction. For permeable pavement and other stormwater BMP's designed to infiltrate subgrade compaction should be "firm and unyielding" (qualitative), and 90- 92% Standard Proctor (quantitative). Do not allow heavy compaction due to heavy equipment operation. The subgrade should not be subject to truck traffic.
12. Storm pipe shall be a minimum of 10 feet away from building foundations and/or roof lines.
13. After all other utilities are installed and prior to asphalt work, all storm pipe shall pass a low pressure air test in accordance with Section 7-04.3(1) E & F of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction. Pipe runs shall be tested with (pipe loaded and compacted to finish grade. Products used to seal the inside of the pipe are not to be used to obtain the air test.
14. All temporary sedimentation and erosion control measures, and protective measures for critical areas, preserved native vegetation and significant trees shall be installed prior to initiating any construction activities.
15. Stormwater facilities with side slopes steeper than 3:1 or with a maximum water depth greater than 3 feet shall require a powder or vinyl coated chain link perimeter fence per standard plans 3-501-007 and -008. Side slope averaging shall not be allowed. All inlet and outfall pipes shall have a trash rack installed and a mortared riprap headwall. Refer to storm drainage note 21.
16. Prior to sidewalk construction: lot drainage systems, stub-outs and any behind sidewalk drains must be installed as required. Pipe shall be PVC 3034, or SDR-35. Stub-outs shall be marked with a 2" x 4" with 3 feet visible above grade and marked "storm". Locations of these installations shall be shown on the record drawing construction plans submitted to the City.
17. Storm water retention/detention facilities, storm drainage pipe and catch basins shall be flushed and cleaned by the developer prior to; City of Marysville final acceptance of the project and; upon commencement and completion of the 2-year warranty period for the storm drainage system.
18. Unless otherwise noted, all storm sewer pipe shall be; (CP) non-reinforced concrete, ASTM C-14; (RCP) reinforced concrete for concrete pipe diameters 24" or greater, ASTM C-76; or (CMP) corrugated metal. CMP to be; galvanized steel with Treatment I asphalt coating or better; or corrugated aluminum; or AASHTO M274-70 aluminized steel. All pipes shall be installed with rubber gaskets as per manufacturers recommendations.

    Coverage Requirements for 12" diameter pipe:
    Backfill over pipe less than 12" requires RCP Class IV.
    Backfill over pipe less than 24" requires RCP minimum.
    Backfill over pipe greater than 24" requires 16 gage CMP minimum.
19. Corrugated Polyethylene Pipe (CPP):
    A. All pipe shall be smooth interior. CPP shall be double-walled. All pipe shall meet AASHTO and ASTM specifications.
    B. Upon request by the City inspector, all pipe runs shall pass the low pressure air test requirements of Section 7-04.3(1) E & F of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction. Pipe runs shall be tested with pipe loaded and compacted to finish grade.
    C. Upon request by the City inspector, pipe shall be subject to mandrel testing (mandrel size = 90% of nominal pipe diameter).
    D. Pipe shall be stored on site in shipping bunks on a flat level surface. This requirement will be strictly enforced; failure to comply may result in rejection of the pipe and/or future restriction on use of material.
    E. Minimum depth of cover shall be 2 feet.
    F. Couplings shall be integral bell and spigot or double bell separate couplings. Split couplings will not be allowed.
    G. Backfill shall comply with Section 7-08.3(3) of the WSDOT Standard Specifications for Road, Bridge, and Municipal Construction modified as follows:

    The second paragraph of Section 7-08.3(3) is deleted and replaced with the following:

    The material used for backfilling around and to a point 1 foot above the top of the pipe shall be clean earth or sand, free from clay. Any gravel or stones included in the backfill shall pass through a 1 inch sieve.
20. All non-perforated metal pipe shall have neoprene gaskets at the joints. O-ring gaskets may be used for type-F coupling band.
21. Culvert ends shall be beveled to match side slopes. Field cutting of culvert ends is permitted when approved by the City engineer or designated representative.
22. All field cut culvert pipe shall be treated as required in the Standard Specifications or General Special Provisions.
23. All pipe shall be placed on stable earth. If in the opinion of the City inspector, the existing trench foundation is unsatisfactory, then it shall be excavated below grade and backfilled with gravel bedding to support the pipe.
24. All landscaped and lawn areas, except areas within the dripline of preserved trees, shall be amended per BMP T5.13 Post Construction Soil Quality and Depth in Chapter 5, Volume V of the Stormwater Manual.

INFILTRATION FACILITY NOTES

1. Infiltration facility installations shall be directed/overseen by a licensed geotechnical engineer if directed by the City Engineer or designee. The geotechnical engineer shall certify that the Bioretention Soil Media soil type and condition (native or fill soil) meets the deign specification prior to final inspection.
2. The geotechnical engineer will prescribe corrective action for soil that does not meet the design specification, soil that has been over compacted or for soil that has been contaminated by turbidity. Final engineering approval is required from the City.
3. Performance testing and verification for a facility shall be conducted before final construction approval by the City, or prior to construction of other project improvements or recording of a subdivision as required by MMC 14.15.120. The contractor shall be responsible for making corrections to ensure the stormwater system functions as designed.

STAND PIPE AND SEDIMENT POND MAINTENANCE

1. The embankment of the basin should be checked regularly to ensure that it is structurally sound and has not been damaged by erosion or construction equipment. The emergency spillway should be checked regularly to insure that the lining is well established and erosion resistant. The siltation basin should be checked for sediment cleanout after each rainfall which produces runoff. When the sediment reaches the cleanout level, it shall be removed and properly disposed.

BIOFILTER SWALE PLANTING NOTES

Final engineering approval is contingent on swale inspection by the City of Marysville Construction Inspection Division of Community Development.

Inspection must be requested by calling the City of Marysville Construction Inspection Division of Community Development at 360.363.8100 at least 24 hours prior to inspection date.

Erosion control seed mix or shingle-weave sod, as determined by the City Engineer or designated representative, shall be placed above the design water surface for the 6-month, 24-hour storm event. A minimum topsoil depth of 4" shall be placed within the swale. The topsoil surface shall be at design grade for the swale. An erosion control blanket shall cover the topsoil to prevent erosion of topsoil and seed mix until a well defined ground cover is established. The wetted surface area as defined by the 6-month, 24-hour storm event shall be planted with wet tolerant plant species.

Recommended Seed Mix for Bioswales:

	% Weight	% Purity	% Germination
Tall or meadow fescue *Festuca arundinacea or festuca elatior*	75-80	98	90
Seaside/Creeping bentgrass *agrostis palustris*	10-15	92	85
Redtop bentgrass *agrostis alba or Agrostis gigantea*	5-10	90	80

CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. CONFORMANCE OF THIS DESIGN WITH ALL APPLICABLE LAWS AND REGULATIONS IS THE FULL AND COMPLETE RESPONSIBILITY OF THE LICENSED DESIGN ENGINEER. WHOSE STAMP AND SIGNATURE APPEAR ON THIS SHEET. ACKNOWLEDGMENT OF CONSTRUCTION DRAWING REVIEW DOES NOT IMPLY CITY APPROVAL FOR CONSTRUCTION ACTIVITIES THAT REQUIRED OTHER COUNTY, STATE OR FEDERAL PERMIT REVIEW AND APPROVAL. THE PROPERTY OWNER AND LICENSED DESIGN ENGINEER SHALL BE RESPONSIBLE FOR THE ACQUISITION AND COMPLIANCE OF ALL APPLICABLE PERMITS OR AUTHORIZATIONS WHICH MAY INCLUDE BUT ARE NOT LIMITED TO: WSDFW HYDRAULIC PROJECT APPROVAL (HPA), WSDOE NOTICE OF INTENT (NOI), ANY CORPS OF ENGINEERS FILL PERMITS AND THE REQUIREMENTS OF THE ENDANGERED SPECIES ACT. THIS ____ DAY OF _____, 202_.

DEVELOPMENT SERVICES MANAGER

THESE APPROVED CONSTRUCTION PLANS EXPIRE AFTER PERIOD OF 60 MONTHS FROM THE DATE SHOWN ABOVE OR UPON EXPIRATION OF PRELIMINARY PLAT OR SITE PLAN APPROVAL, PER MMC 22A.040.020 & 22A.040.030.

CONSTRUCTION SWPPP

The 13 elements that are part of a Construction SWPPP are as follows:

1. Mark Clearing Limits: Prior to clearing or disturbing the limits must be marked. This element is part of most normal construction plans as one of the first steps.
2. Establish Construction Access: All erosion control plans shall install a stabilized construction entrance (or other method of preventing sediment transport onto the roads). If a standard gravel construction entrance is proposed, use geo-textile fabric under the rock. Note: a wheel wash is required for plans that propose winter grading.
3. Detain Flows: Based on a downstream analysis it may be necessary to detain runoff from a site under construction. It may be necessary to construct and use a detention pond to control flows during construction.
4. Install Sediment Controls: If there is runoff from the construction site, sediment shall be removed from the water. Note that the water quality standards must be met.
5. Stabilize Soils: All exposed and non-worked soil shall be stabilized by use of BMP's. Note there are time periods of allowed exposure that depend on the season. Groundcover both temporary and permanent need to be part of the construction plans.
6. Protect Slopes: Cut and fill slopes need to be protected from erosive flows and concentrated flows until permanent cover and drainage conveyance systems are in place.
7. Protect Drain Inlets: All storm drain inlets require protection from sediment and silt laden water.
8. Stabilize Channels and Outlets: Temporary and permanent conveyance systems shall be stabilized to prevent erosion during and after construction. Culvert outlets require protection.
9. Control Pollutants: The plan shall show how all pollutants, including waste materials and demolition debris, will be handled. This includes maintenance of construction equipment, fertilizers, application of chemicals, and water treatment systems.
10. Control De-Watering: The water from de-watering systems for trenches, vaults and foundations shall be discharged into a controlled system.
11. Maintain BMPs: The plan shall provide for inspection and maintenance of the planned and installed construction BMPs as well as their removal at the end of the project.
12. Manage the Project: The plan shall outline how the site shall be managed for erosion control and identify the management team. It needs to cover phasing, training, pre-construction conference, coordination with utilities and contractors, monitoring and reporting. It shall provide for notice of problems, revisions during construction and contingency planning. One of the most important elements in the management of the project is planning for contingencies based on the risk of exposure during phases of the development. It is essential that planning is ongoing throughout the life of the project.
13. Protect on-Site stormwater management BMPs for runoff from roofs and other hard surfaces. On-site Stormwater Management BMPs shall be protected at all times during the construction process. This may mean that stormwater management BMPs will be installed towards the end of the construction process to avoid siltation and compaction.

CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. CONFORMANCE OF THIS DESIGN WITH ALL APPLICABLE LAWS AND REGULATIONS IS THE FULL AND COMPLETE RESPONSIBILITY OF THE LICENSED DESIGN ENGINEER. WHOSE STAMP AND SIGNATURE APPEAR ON THIS SHEET. CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. CONFORMANCE OF THIS DESIGN WITH ALL APPLICABLE LAWS AND REGULATIONS IS THE FULL AND COMPLETE RESPONSIBILITY OF THE LICENSED DESIGN ENGINEER. WHOSE STAMP AND SIGNATURE APPEAR ON THIS SHEET. ACKNOWLEDGMENT OF CONSTRUCTION DRAWING REVIEW DOES NOT IMPLY CITY APPROVAL FOR CONSTRUCTION ACTIVITIES THAT REQUIRED OTHER COUNTY, STATE OR FEDERAL PERMIT REVIEW AND APPROVAL. THE PROPERTY OWNER AND LICENSED DESIGN ENGINEER SHALL BE RESPONSIBLE FOR THE ACQUISITION AND COMPLIANCE OF ALL APPLICABLE PERMITS OR AUTHORIZATIONS WHICH MAY INCLUDE BUT ARE NOT LIMITED TO: WSDFW HYDRAULIC PROJECT APPROVAL (HPA), WSDOE NOTICE OF INTENT (NOI), ANY CORPS OF ENGINEERS FILL PERMITS AND THE REQUIREMENTS OF THE ENDANGERED SPECIES ACT. THIS ____ DAY OF _____, 202_.

DEVELOPMENT SERVICES MANAGER

THESE APPROVED CONSTRUCTION PLANS EXPIRE AFTER PERIOD OF 60 MONTHS FROM THE DATE SHOWN ABOVE OR UPON EXPIRATION OF PRELIMINARY PLAT OR SITE PLAN APPROVAL, PER MMC 22A.040.020 & 22A.040.030.

BIORETENTION SOIL MEDIA PROCEDURE NOTE:
Two acceptable criteria for Bioretention Soil Media (BSM or CAS):
- Default Bioretention Soil Media
- Custom Bioretention Soil Mix.

Default Bioretention Soil Media

Projects which use the following requirements for the bioretention soil media do not have to test the media for its saturated hydraulic conductivity

Mineral Aggregate
Percent Fines: A range of 2 to 4 percent passing the #200 sieve is ideal and fines should not be above 5 percent for a proper functioning specification according to ASTM D422.

Aggregate Gradation
The aggregate portion of the BSM should be well-graded. According to ASTM D 2487-98 (Classification of Soils for Engineering Purposes (Unified Soil Classification System)), well-graded sand should have the following gradation coefficients:
- Coefficient of Uniformity (Cu = D60/D10) equal to or greater than 4, and
- Coefficient of Curve (Cc = (D30)2/D60 x D10) greater than or equal to 1 and less than or equal to 3.

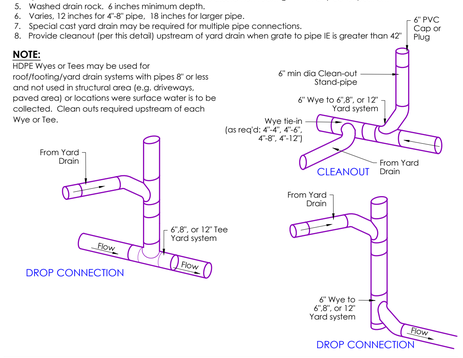
The sand gradation below is often supplied as a well-graded utility or screened. With compost this blend provides enough fines for adequate water retention, hydraulic conductivity within recommended range (see below), pollutant removal capability, and plant growth characteristics for meeting design guidelines and objectives. Where existing soils meet the aggregate gradation below, those soils may be amended rather than importing mineral aggregate.

General Guideline for Mineral Aggregate Gradation	
Sieve Size	Percent Passing
3/8"	100
#4	95-100
#10	75-90
#40	25-40
#100	4-10
#200	2-5

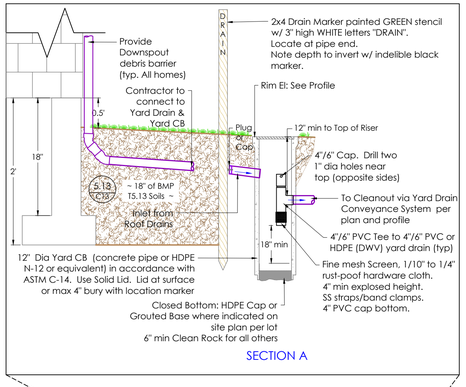
Compost to Aggregate Ratio, Organic Matter Content, Cation Exchange Capacity
- Compost to aggregate ratio: 60-65 percent mineral aggregate, 35 - 40 percent compost.
- Organic matter content: 5 - 8 percent by weight.
- Cation Exchange Capacity (CEC) must be > 5 milliequivalents/100 g dry soil Note: Soil mixes meeting the above specifications do not have to be tested for CEC. They will readily meet the minimum CEC.

Compost
To ensure that the BSM will support healthy plant growth and root development, contribute to biofiltration of pollutants, and not restrict infiltration when used in the proportions cited herein, the following compost standards are required.
- Meets the definition of "composted materials" in WAC 173-350-220 (including contaminant levels and other standards), available online at http://www.ecy.wa.gov/programs/swfa/organics/soil.html
- Produced at a composting facility permitted by the WA Department of Ecology. A current list of permitted facilities is available at http://www.ecy.wa.gov/programs/swfa/compost/
- The compost product must originate a minimum of 65 percent by volume from recycled plant waste as defined in WAC 173-350-100 as "Type I Feedstocks." A maximum of 35 percent by volume of other approved organic waste as defined in WAC 173-350-100 as "Type III", including postconsumer food waste, but not including biosolids, may be substituted for recycled plant waste. Type II and IV feedstocks shall not be used for the compost going into bioretention facilities or rain gardens.
- Stable (low oxygen use and CO2 generation) and mature (capable of supporting plant growth) by tests shown below. This is critical to plant success in a bioretention soil mixes.
- Moisture content range: no visible free water or dust produced when handling the material.
- Tested in accordance with the U.S. Composting Council "Testing Methods for the Examination of Compost and Composting" (TMECC), as established in the Composting Council's "Seal of Testing Assurance" (STA) program. Most Washington compost facilities now use these tests.
- Screened to the size gradations for Fine Compost under TMECC test method 02.02-B (gradations are shown in the specification in an appendix of the ***Low Impact Development Technical Guidance Manual for Puget Sound***)
- pH between 6.0 and 8.5 (TMECC 04.11-A). If the pH falls outside of the acceptable range, it may be modified with lime to increase the pH or iron sulfate plus sulfur to lower the pH. The lime or iron sulfate must be mixed uniformly into the soil prior to use in the bioretention area.
- Manufactured inert content less that 1% by weight (TMECC 03.08-A)
- Minimum organic matter content of 40% (TMECC 05.07-A)
- Soluble salt content less than 4.0 mmhos/cm (TMECC 04.10-A)
- Maturity greater than 80% (TMECC 05.05-A "Germination and Vigor")
- Stability of 7 or below (TMECC 05.08-B "Carbon Dioxide Evolution Rate")
- Carbon to nitrogen ratio (TMECC 04.01 "Total Carbon" and 04.02D "Total Kjeldahl Nitrogen") of less than 25:1. The C:N ratio may be up to 35:1 for plantings composed entirely of Puget Sound Lowland native species and up to 40:1 for coarse compost to be used as a surface mulch (not in a soil mix).

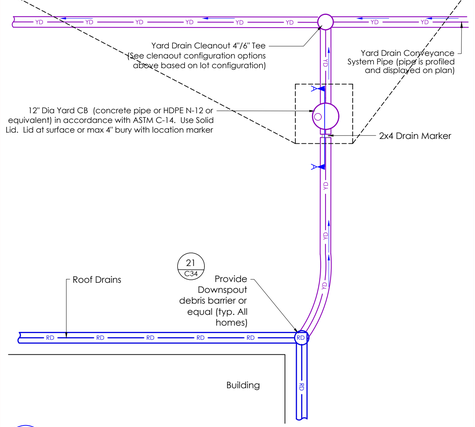
11 BIORETENTION SOIL MEDIA
SCALE: NTS



Design Criteria for Custom Bioretention Soil Mixes



Projects which prefer to create a custom Bioretention Soil Mix rather than using the default requirements above must demonstrate compliance with the following criteria using the specified test method:
- CEC ≥ 5 meq/100 grams of dry soil; USEPA 9081
- pH between 5.5 and 7.0
- 5 - 8 percent organic matter content before and after the saturated hydraulic conductivity test; ASTM D2974(Standard Test Method for Moisture, Ash, and Organic Matter of Peat and Other Organic Soils)
- 2-5 percent fines passing the 200 sieve; TMECC 04.11-A
- Measured (Initial) saturated hydraulic conductivity of less than 12 inches per hour; ASTM D 2434 (Standard Test Method for Permeability of Granular Soils (Constant Head)) at 85% compaction per ASTM D 1557 (Standard Test Method s for Laboratory Compaction Characteristics of Soil Using Modified Effort). Also, use Appendix V-B, Recommended Procedures for ASTM D 2434 When Measuring Hydraulic Conductivity for Bioretention Soil Mixes.
- Design (long-term) saturated hydraulic conductivity of more than 1 inch per hour. Note: Design saturated hydraulic conductivity is determined by applying the appropriate infiltration correction factors as explained above under "Determining Bioretention soil mix infiltration rate."
- If compost is used in creating the custom mix, it must meet all of the specifications listed below for compost.



Infiltration rates for the initial placement of Bioretention Soil Media is to be within 6 to 12 inches per hour to ensure vegetation survival.

NOTES:
1. Yard drains to be constructed from High Density Polyehtylene (HDPE) in accordance with ASTM C-14 otherwise shown on the plans or noted in the specifications.
2. Cutout hole size is equal to outlet pipe outside diameter plus yard drain wall thickness.
3. Connection to outlet pipe to be mortared and made flush with inside of the yard drain wall.
4. Cast iron bell grate. Fits into bell recess and extends flush with face of bell. The grate shall have slots (holes) that constitute 50 percent open area for drainage unless otherwise specified on the plans or noted in the specifications. Inlet bell area shall be finished to assure non-rocking fit with any cover position.
5. Washed drain rock. 6 inches minimum depth.
6. Varies. 12 inches for 4"-8" pipe. 18 inches for larger pipe.
7. Special cast yard drain may be required for multiple pipe connections.
8. Provide cleanout (per this detail) upstream of yard drain when grate to pipe IE is greater than 42"

NOTE:
HDPE Wyes or Tees may be used for roof/footing/yard drain systems with pipes 8" or less and not used in structural area (e.g. driveways, paved area) or locations were surface water is to be collected. Clean outs required upstream of each Wye or Tee.

90 BIORETENTION CELL MATERIALS SPECIFICATION - TYPICAL SECTION
SCALE: NTS

Features
Integrated flow directional gutter outlet which directs the flow of water from the gutters onto an adjustable elliptical primary screen.

How it works
The steep angle of primary screen enables the action of the water to wash the screen and minimize maintenance. A secondary stainless steel screen keeps mosquitoes and vermin out of downpipes. With the removal of the secondary screen, the Leaf Beater is ideal for use purely as a debris removing device even when rainwater is not being collected.

Four settings can be applied to vary the angle at which the elliptical primary screen faces to adjust for various intensities of rainfall and amounts of debris. After observing the performance of the Leaf Beater®, the screen can be adjusted until the best operating setting is achieved.

Installation
The Leaf Beater® is usually mounted directly under the roof gutter, however it can be mid-mounted on a wall to make it easier to access for cleaning.
The Leaf Beater® range includes three variants and connects with PVC and metal downpipes:
1. For rectangular downpipes – 2" x 3
2. For round downpipes – 3" and 4" round.

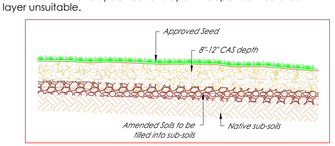
101 BIORETENTION CELL SEED MIX
SCALE: NTS

12 TYPICAL UNDERDRAIN SECTION
SCALE: 1"=1'

Design Criteria:
Soil Retention: The duff layer and native topsoil should be retained in an undisturbed state to the maximum extent practicable. In any areas requiring grading remove and stockpile the duff layer and topsoil on site in a designated, controlled area, not adjacent to public resources and critical areas, to be reapplied to other portions of the site where feasible.
Soil quality: The resulting soil should be conducive to the type of vegetation to be established. All areas subject to clearing and grading that have not been covered by impervious surface, incorporated into a drainage facility or engineered as structural fill or slope shall, at project completion, demonstrate the following:
- A topsoil layer with a minimum organic matter content of ten percent dry weight in planting beds, and 5% organic matter content (based on a loss-on-ignition test) in turf areas, and a pH from 6.0 to 8.0 or matching the pH of the original undisturbed soil. The topsoil layer shall have a minimum depth of eight inches except where tree roots limit the depth of incorporation of amendments needed to meet the criteria. Subsoils below the topsoil layer should be scarified at least 4 inches with some incorporation of the upper material to avoid stratified layers, where feasible.
- Planting beds must be mulched with 2 inches of organic material.
- Quality of compost and other materials used to meet the organic content requirements:
  1. The organic content for "pre-approved" amendment rates can be met only using compost meeting the compost specification for Bioretention (BMP T7.30), with the exception that the compost may have up to 35% biosolids or manure.
  2. Compost used in bioretention areas should be stable, mature and derived from yard debris, wood waste, or other organic materials that meet the intent of the organic soil amendment specification. Biosolids and manure composts can be higher in bioavailable phosphorus than compost derived from yard or plant waste and therefore are not allowed in bioretention areas due to the possibility of exporting bio-available phosphorus in effluent.
  3. The compost must also have an organic matter content of 35% to 65%, and a carbon to nitrogen ratio below 25:1.
  4. The carbon to nitrogen ratio may be as high as 35:1 for plantings composed entirely of plants native to the Puget Sound Lowlands region.
- Calculated amendment rates may be met through use of composted material meeting the requirements above; or other organic materials amended to meet the carbon to nitrogen ratio requirements, and not exceeding the contaminant limits identified in Table 220-B, Testing Parameters, in WAC 173-350-220.

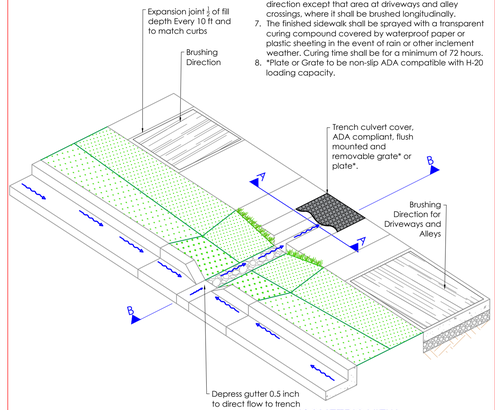
Implementation Options:



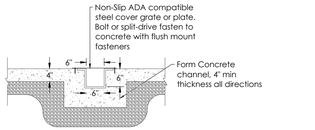
Option 1: Leave native soil undisturbed, and protect from compaction during construction.
Option 1 is only applicable to sites that have the original, undisturbed soil native to the site. This will most often be forested land that is being left undisturbed in the current project.

Option 2: Amend disturbed soil according to the following procedures:
a. Scarify subsoil to a depth of one foot.
b. In planting beds, place three inches of compost and till in to an eight-inch depth.
c. In turf areas, place two inches of compost and till in to an eight-inch depth.
d. Apply two to four inches of arborist wood chip, coarse bark mulch, or compost mulch to planting beds after final planting.
(Alternatively, disturbed soil can be amended on a site-customized manner so that it meets the soil quality criteria set forth above, as determined by a licensed engineer, geologist, landscape architect, or other person as approved by Snohomish County).

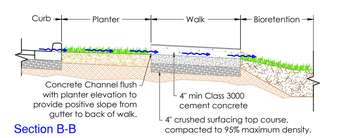
Option 3: Disturbed Soil.
Stockpile existing topsoil during grading and replace it prior to planting. Stockpiled topsoil must be amended if needed to meet the organic matter and depth requirements by following the procedures in option (4). Remove forest duff layer and topsoil and stockpile separately, in an approved location prior to grading. Cover soil and duff piles with woven weed barrier (available from nursery supply stores) that sheds moisture yet allows airflow.



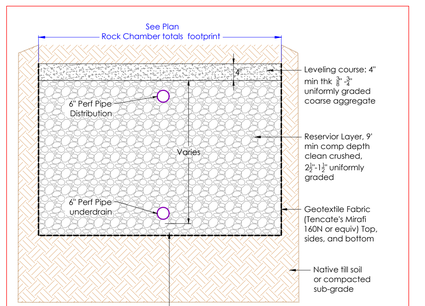
Option 4: Import topsoil mix with 10% min soil organic matter content.
Import topsoil mix of sufficient organic content and depth to meet the organic matter and depth requirements.



NOTE: All yards, landscape areas, or disturbed areas to receive 18 inches of Compost Amended Soils meeting the criteria of BMP T5.13. Careful removal of 9 inches of the onsite Forest Duff** could meet this requirement if properly protected and cared for during the Construction Process.
**Ignition testing of organics shall confirm that forest duff meets BMP T5.13 Specifications by an independent soils lab.
Note: Grading with Heavy Equipment may render this layer unsuitable.



513 COMPOST AMENDED SOILS
SCALE: NTS



NOTES:
1. Sidewalks are typically 5' wide and a minimum depth of 4". See typical section for exact dimensions.
2. The sidewalk area through the driveway shall be 6" thick. See details 346 and 347 for this area.
3. Sidewalks shall all be class 3000 cement concrete, with air entrainment (min. 4%, Max. 8%).
4. Sub grade shall be compacted to not less than 95% of maximum density.
5. Sidewalk joints shall be edged with a 1/4" inch radius edger. Sidewalk edges shall be tooled with a 1/2" inch radius edger.
6. The finished surface shall be brushed in a transverse direction except that area at driveways and alley crossings, where it shall be brushed longitudinally.
7. The finished sidewalk shall be sprayed with a transparent curing compound covered by waterproof paper or plastic sheeting in the event of rain or other inclement weather. Curing time shall be for a minimum of 72 hours.
8. *Plate or Grate to be non-slip ADA compatible with H-20 loading capacity.

SEWER AND WATER OVERVIEW PLAN

GENERAL NOTE:

It is the responsibility of the contractor and construction manager to ensure that all conflicts between plan sets are identified and resolved prior to commencement of construction activities. The contractor shall verify the location of all existing utilities prior to any construction. Agencies shall be notified within a reasonable time prior to the start of construction.

811 Know what's **below.** **Call** before you dig.

WATER METER NOTE

1" meters for Lots 12-13, 36-39, 69-70, 83, 88-89,104-105, 166-167, 174-175, and 179-180
$\frac{3}{4}$" meters for the remaining lots

GENERAL NOTES FOR SANITARY SEWER

1. All workmanship and materials shall be in accordance with City of Marysville standards and the most recent copy of the State of Washington Standard Specifications for Road, Bridge, and Municipal Construction (WSDOT/APWA).
2. City of Marysville datum (NGVD, 1960 supplemental adjustment) shall be used for all vertical control. A list of benchmarks is available at the Public Works Department.
3. All approvals and permits required by the City of Marysville shall be obtained by the Contractor prior to the start of construction. All sanitary improvements shall be constructed in accordance with these approved plans. Any deviation from these plans shall require prior approval from the Owner, the City Engineer, and other appropriate public agencies.
4. If construction is to take place in the County right-of-way, the Contractor shall contact the City Public Works Department to obtain all the required approvals and permits.
5. A preconstruction meeting shall be held with the City of Marysville Department of Public Works prior to the start of construction.
6. The City of Marysville Department of Public Works shall be notified a minimum of 48 hours in advance of a tap or connection to an existing sanitary sewer main. The inspector shall be present at the time of the tap or connection.
7. The Contractor shall be fully responsible for the location and protection of all existing utilities. The Contractor shall verify all utility locations prior to construction by calling the Underground Locate Line at 1-800-424-5555 a minimum of 48 hours prior to any excavation.
8. Gravity sewer main shall be PVC, ASTM D 3034 SDR 35 or ASTM F 789 with joints and rubber gaskets conforming to ASTM D 3212 and ASTM F 477.
9. Precast manholes shall meet the requirements of ASTM C 478. Manholes shall be Type 1-48" manhole unless otherwise specified on the plans. Joints shall be rubber gasketed conforming to ASTM C 443 and shall be grouted from the inside. Lift holes shall be grouted from the outside and inside of the manhole.
10. Side sewer services shall be PVC, ASTM D 3034 SDR 35 with flexible gasketed joints. Side sewer connections shall be made by a tap to an existing main or a tee from a new main connected above the spring line of the pipe. The contractor shall provide the City with accurate As-Built Drawings of all side sewer locations.
11. All sewer mains shall be field staked for grades and alignment prior to construction by a licensed engineer or surveying firm qualified to perform such work. Prior to constructing any sewer, the lot corners shall be staked and sewer line location established by survey, cost of which shall be borne by the Developer.
12. All plastic pipe and services shall be installed with continuous tracer tape installed 12" to 18" under the proposed finished sub grade. The marker shall be plastic non-biodegradable, metal core or backing marked sewer which can be detected by a standard metal detector.
13. Each side sewer lateral shall have a 2" x 4" wood "marker" at the termination of the stub. The "marker" shall extend from the trench to above finished grade. Above the ground surface, it shall be painted "green" with "S/S" and the depth, in feet, stenciled in black letters 2" high.
14. Side sewers shall be installed by the Developer and coordinated for clearance with power, telephone, and other utilities. All side sewers to be installed 10 feet into lot served and staked and marked as shown on these plans.
15. Pipe bedding shall be in accordance with WSDOT Standard Plan B-18c Class F. Pea gravel is an acceptable bedding material. All pipe shall be laid on a properly prepared foundation according to Standard Specification 7-02.3(1). This shall include necessary leveling of the trench bottom or the top of the foundation materials as well as placement and compaction of required bedding material to uniform grade so that the entire length of the pipe will be supported an a uniformly dense unyielding base.
16. A 3-foot square x 4-inch thick asphalt or concrete pad shall be installed around all cleanouts that are not in a pavement area.
17. Temporary street patching shall be allowed for as approved by the City Engineer. Temporary street patching shall be provided by placement and compaction of 1-inch maximum asphalt concrete cold mix. Contractor shall be responsible for maintenance as required.
18. Erosion control measure shall be taken by the Contractor during construction to prevent infiltration and inflow into existing and proposed sanitary sewer facilities.
19. Provide traffic control plan(s) in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) as required.
20. It shall be the responsibility of the Contractor to have a copy of these approved plans on construction site at all times.
21. Any changes to the design shall first be reviewed and approved by the project engineer and the City of Marysville.
22. All lines shall be cleaned and pressure tested prior to paving in conformance with the above referenced specifications. (See note 1.) Testing of the sanitary sewer main shall include TV inspection of the main by the Contractor, immediately prior to TV inspection enough water shall be run down the line so it comes out the lower manhole. A copy of the video tape shall be submitted to the City of Marysville. Acceptance of the line will be made after the tape has been reviewed and approved by Public Works. A water test of all manholes in accordance with Marysville standard may also be required. Testing shall take place after all underground utilities are installed and compaction of the roadway sub grade is completed.
23. Prior to backfill all mains and appurtenances shall be inspected and approved by the City of Marysville Department of Public Works. Approval shall not relieve the Contractor for correction of any deficiencies and/or failures as determined by subsequent testing and inspections. It shall be the Contractor's responsibility to notify the City of Marysville for the required inspections.

GENERAL NOTES FOR WATER

1. All workmanship and material shall be in accordance with City of Marysville standards and the most current copy of the State of Washington/APWA Standard Specifications for Road, Bridge, and Municipal Construction. All water system improvements shall be constructed in accordance with these approved plans. Any deviation from the plans will require prior approval from the Owner, the City Engineer, and other approved public agencies.
2. A preconstruction meeting shall be held with the City prior to the start of construction.
3. It shall be the responsibility of the Contractor to locate or have located by the appropriate companies all utilities prior to beginning construction. Call Underground Locate at 1-800-424-5555 a minimum of 48 hours prior to any excavations.
4. Water pipe shall be ductile iron pipe standard thickness Class 52 cement-lined unless otherwise specified and shall conform to ANSI/AWWA C151/A21.51.
5. Gate valves shall be resilient wedge, NRS (Non Rising Stem) with O-rings seals. Valve ends shall be mechanical joint or ANSI flanges. Valves shall conform to AWWA S09-80. Valves shall be Mueller, M & H, Clow R/W or Waterous Series 500.
6. Fittings shall be ductile iron short body compact conforming to AWWA C110, C11 and C153 and shall be cement-mortar lined conforming to AWWA C104. The City will be given 72 hours notice prior to scheduling a shutdown. Where connections require "field verification", connection points will be exposed by Contractor and fittings verified 48 hours prior to distributing shut-down notices.;
7. Fire hydrants shall conform to AWWA C501 and shall be of standard manufacture and of a pattern approved by Marysville, with Storz 5" quarter turn fitting. Hydrants shall be M & H Reliant Style 929 or Mueller A-423 (MJ). Hydrants shall be bagged until system is approved.
8. All lines shall be disinfected, flushed, and pressure tested in conformance with WSDOT/APWA standards and specifications. All pipe shall be tested at 240 psi. The Contractor shall furnish all temporary plugs, testing devices, etc. The City shall be present for all testing. The City will take purity tests, and connection will be authorized following passing of the tests. The Contractor shall not operate any valve or part of the City water system without notification and specific supervision of the City utility superintendent. The Contractor shall make all connections to the system required after making arrangements with the City in advance. Work and procedures shall conform to APWA Sec. 7-11.3(9).
9. Installation of pipe, fittings and valves, hydrants, and appurtenances shall conform to WSDOT/APWA standard specifications. Cover shall be 42 inches over the top of pipe unless otherwise noted on plans. In the event grade revision following water main construction results in cover over the water main of less than 3 feet or in excess of 5 feet, the water main shall be reconstructed by the Owner to conform to the specifications of the City of Marysville unless depth has been pre-approved by the City. All added costs of inspecting such water main reconstruction shall be charged to the developer.
10. Prior to construction of any water mains, the lot corners shall be staked and water main locations established by survey, cost of which is to be borne by the developer.
11. To maintain the required alignment, use short lengths and deflect the joints or use necessary bends.
12. Bedding material meeting the requirements for rigid pipe shall be placed to a depth of 6" under and around the pipe and to a depth of at least 12 inches over the top of the pipe. The bedding materials hall be rammed and tamped around the pipe by the use of shovels or other approved hand-held tools so as to provide firm and uniform support over the full length of all pipe, valves, and fittings. Care shall be taken to prevent any damage to the pipe or its protective coating.
13. Separation of water and sewer mains shall conform to W.D.O.E. standards or special construction requirements.
14. Services, blow-offs, and miscellaneous details shall be shown on the drawings or standard plans.

ADDITIONAL NOTES
1. Hydrants shall be painted all yellow, without painted green tops in accordance with Design and Construction Standard 2-060 part C;
2. All water main placed in fill soils shall be restrained joint;

CONSTRUCTION DRAWING REVIEW ACKNOWLEDGEMENT

THIS PLAN SHEET HAS BEEN REVIEWED AND EVALUATED FOR GENERAL COMPLIANCE WITH THE APPLICABLE CITY OF MARYSVILLE CODES AND ORDINANCES. 1. STATE APPROVED DOUBLE CHECK VALVE ASSEMBLY.
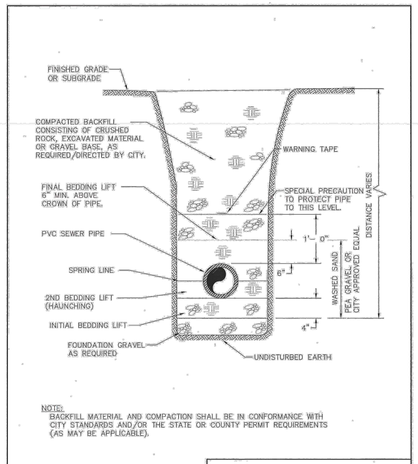
2. IN TRAFFIC AREAS (FOR 2 1/2" ASSEMBLY AND SMALLER) USE: PRECAST CONCRETE VAULT (UTILITY VAULT CO 233-LA, OR APPROVED EQUAL), OR PLASTIC VALVE BOX (UTILITY VAULT CO 1324-12L, OR APPROVED EQUAL). IN TRAFFIC AREAS: A TRAFFIC LOADED BOX MUST BE USED AND LOCATION APPROVED BY THE CITY OF MARYSVILLE PRIOR TO INSTALLATION.
3. IF A DAYLIGHT DRAIN CANNOT BE PROVIDED, THERE MUST BE A 4" MINIMUM LAYER OF FREE DRAINING GRAVEL AT THE BOTTOM OF THE BOX.
4. ANGLES MAY BE IN OR OUT OF BOX, AS LONG AS SUFFICIENT ROOM IS ALLOWED AT EACH END FOR VALVE OPERATOR AND DCVA REPAIR OR MAINTENANCE.
5. PROVIDE 4" OF PEA GRAVEL.

NOTES



1 ALL TEST COCKS MUST HAVE BRASS PLUGS.
2 TEST COCKS MUST FACE UP OR SIDEWAYS, WHICH EVER IS MORE ACCESSIBLE
3 TEE AND GATE VALVE REQUIRED ON MAIN.
4 SINGLE DETECTOR CHECKS ARE NOT APPROVED BACKFLOW PREVENTION ASSEMBLIES.
5 ASSEMBLY REQUIRES CERTIFICATION UPON INSTALLATION AND RECERTIFICATION ANNUALLY.
6 TEST COCKS ARE REQUIRED TO BE PLUGGED IF ASSEMBLY IS INSTALLED UNDERGROUND.
7 MAXIMUM HEIGHT OF ASSEMBLY IS FIVE FEET UNLESS AN OSHA APPROVED PLATFORM IS PROVIDED.
8 METER SHALL BE INSTALLED SUCH THAT IT CAN BE READ WITHOUT ENTERING VAULT WITH ACCESS HATCH OPEN.
9 ALL DIMENSIONS ARE MINIMUM CLEARANCE REQUIREMENTS.
10 MINIMUM INSIDE VAULT HEIGHT IS 78" FOR 3" SERVICE AND LARGER.

Section 1 – Report Summary

1.1 Project Description

MJS Investors is proposing the development of 29.48-*acres* of land in Northwest Marysville, WA off of 11th Ave NE. The parcel is vacant and vegetated with pasture. The parcel has an onsite wetland and buffer.

The development of the parcel will result in a Planned Residential Development (PRD) with 182-Lots, public road and shared auto court. Each lot is allocated to accept a maximum of 70% total impervious of roof and driveway with the remaining portion consisting of lawn. Open space areas for both passive and active recreation will be located outside of the proposed lots.

The proposed road access for the PRD will be from 11th Ave NE at three locations. The development consists of public roads, lots, driveways, homes, auto court, on-site recreation and stormwater facilities.

Per NRCS mappings, type "B" Alderwood gravelly sandy loam soils are found throughout the site. No infiltration will be utilized. Infiltration is not feasible in Till soils with infiltration rates less than 0.3 *in/hr*.

The 2019 DOE Stormwater Management Manual for Western Washington will be used for stormwater management guidance. Stormwater management BMPs and engineered designs are specified in this report.

Stormwater facilities will consist of bioretention facilities.

The entire developable project area is in two natural discharge areas with two discharge locations. Stormwater BMPs will be employed to mitigate polluted and unpolluted surface water flows.

Summary Stormwater Management

The project qualifies as 'new development' because there are less than 35% of existing impervious areas. The proposed condition of the fully developed site will have more than 5,000 *sf* impervious areas. Per Figure I-3.1 Vol. 1 of the 2019 SMMWW, all minimum requirements shall apply for this project.

This project triggers MRs 1-9 and is within the City's UGA. The project will choose to adhere to List #2 of MR #5. On-site stormwater BMPs will consist only of BMPT5.13. Feasibility analysis for individual lot BMPs is provided in MR #5 of the report. However, the overall site stormwater management will mirror the requirements and intent of MR #5.

Flow control requirements for the site will be met by detention. The majority of runoff from impervious surfaces and converted surfaces will be detained. A small portion of the site bypasses facilities for detention. The site as a whole meets the flow control threshold requirement matching the fully-forested condition.

Water quality will be met by percolating stormwater through bioretention treatment soils. The bioretention cell mitigates polluted stormwater through physical, chemical, and biological treatment processes.

1.2 Project Data Summary

Existing and proposed project areas are presented for determination of stormwater management requirements based on prescribed thresholds as outlined in the Marysville Municipal Code (MMC 22C) and the 2019 SMMWW Vol-1, Ch-2, Section 2.4 are summarized in the following tables.

Table 1 - Project Parcel Summary

Project Data:	
Applicant	MJS Investors
Site Owner	Myron Gemmer & Brad Gemmer
Project Name	Lakewood Heights PRD
Project T.S.R. Location	Twn 31 N, Rng 5 E, Sec 19, Qtr-SE
Project Address	1125 & 1507 172nd Street NE, Marysville, Washington 98271
Parcel ID(s)	310519-004-009-00, 310519-004-011-00
Watershed	Snohomish
Basin	Snohomish
Sub-Basin	Quilceda Creek
WRIA Number	7-Snohomish
Analysis Standard	2019 DOE SMMWW

Table 2 - Project Area Analysis & Activities Summary

Existing Conditions:		
Total Site Area	1,283,961	sf (29.48 ac)
Existing Impervious Area	0	sf (0.00 ac) 0.0%
Proposed Activity:		
Proposed Activity	PRD Subdivision	
Total Proposed Disturbance Area	1,194,930	sf (27.43 ac)
Proposed Grading Area	1,194,930	sf (27.43 ac)
Proposed New NPGIS Onsite (Roof)	401,843	sf (9.23 ac)
Proposed New PGIS Onsite (Road, Sidewalk & Driveway)	303,086	sf (6.96 ac)
Proposed Replaced Impervious Area	0	sf (0.00 ac)
Native Vegetation convert to Lawn	0	sf (0.00 ac)
Native Vegetation convert to Pasture	0	sf (0.00 ac)
Total New Impervious Area Onsite	704,928	sf (16.18 ac)
Grading is ≤ 2 feet from P/L	No	
Any excavation 4+' at <1:1 slope to P/L	No	
Fill Slopes 4+' and >33% slope	No	

Section 2 - Minimum Requirements

2.1 Assessment of Minimum Requirements and Thresholds

Minimum requirements and thresholds are established by City of Marysville Municipal Code 14.15.050 – Minimum Requirements. Minimum Requirements for new development and Redevelopment are based on a development's disturbance area. Existing and proposed project areas for determination of stormwater management requirements are presented in Table 2.

The existing impervious area is less than 35% so this project qualifies as 'new development'. The proposed condition of the fully developed site will have impervious area in excess of 5,000 sf. This requires construction activities and stormwater management to comply with Minimum Requirements 1 through 9. A full construction SWPPP is also required.

Minimum Requirements per the SWWMM:

MR-1: Prepare Stormwater Site Plan. MMC 14.15.050 (1)

MR-2: Stormwater Pollution Prevention Plan (SWPPP). MMC 14.15.050 (2)

MR-3: Water pollution source control for new development. MMC 14.15.050 (3)

MR-4: Preservation of natural drainage systems and outfalls. MMC 14.15.050 (4)

MR-5: On-site stormwater management. MMC 14.15.050 (5)

MR-6: Runoff treatment. MMC 14.15.050 (6)

MR-7: Flow control requirements. MMC 14.15.050 (7)

MR-8: Detention or treatment in wetlands and wetland buffers. MMC 14.15.050 (8)

MR-9: Inspection, operation and maintenance requirements. MMC 14.15.050 (9)

Each Minimum Requirements is described in the following sections. There are no additional requirements to be met.

2.2 MR #1: Preparation of Stormwater Site Plans

This document is the Stormwater Site Plan Report that addresses the requirements of MR-1. This section presents the portion of the Stormwater Site Plan that includes recommendations, calculations, and procedures required to adhere to Minimum Requirement #1. The evaluation of the existing site conditions follows.

2.2.1 Site Location

The site is located in the SE quarter of Section 19 of Township 31 North, Range 5 East. The street address is 1125 & 1507 172nd Street NE, Marysville, Washington 98271 and the parcel is located on the north side of 172nd Street NE. See Figure 1 for a vicinity map.

2.2.2 Site Description, Existing Conditions

The project site is a 29.48-*acres* parcel. The parcel is owned by Myron Gemmer & Brad Gemmer. The Snohomish County parcel number is 310519-004-009-00, 310519-004-011-00. It is zoned R-6.5 Multi-Family High and Mixed Use and is located in Snohomish County.

The site is vacant. The existing drainage system(s) are undetermined but largely surface runoff to an existing agriculture ditch over the top silt layer. Surface runoff overall flows southwest and east.

The majority of the site is pasture.

All maps and figures are presented in the Support Data section of this document.

A vicinity map that shows the site location is shown as Figure 1.

A site map that shows the property lines is shown in Figure 2.

A topographic map that shows the site boundaries, study area boundaries, and the downstream flow-paths is also presented in Figure 3.

2.2.3 Existing Basin Analysis

The project is defined by the development within the subject parcel. Existing project flow paths are shown in Figure 2.

The study area is located in the Quilceda Creek sub-basin of the Snohomish Basin in the Snohomish watershed (WRIA-7-Snohomish), which drains to the Puget Sound.

All existing flow assessment and site related basin delineations were established by tracing analysis of a LIDAR surface model.

2.2.4 Other Information on the Study Area

The site is not in or adjacent to a USEPA Sole Source Aquifer.

The site is not in a well-head protection area.

The site is not in a floodway or floodplain.

2.2.5 Critical Areas

There is an onsite Category III wetland on the northwest corner of the site. Category III wetlands carry 75-foot buffer. An offsite Category III wetland is located north of the site. The offsite wetland's buffer encroaches onto the site.

2.2.6 Topography

The site and surrounding topography was analyzed using survey topographic points provided by North Peak Associates. A 3D surface model was generated.

The site has mostly flat slopes with high points around 162 feet MSL in the middle of the site. The site slopes up from the west to a high point 162 feet and then slopes down to the east boundary.

Slopes average in the range of 0 to 5 percent for the majority of the developable area. The site has an average slope of 3.89%.

2.2.7 Soils

Per NRCS mappings, Tokul gravelly sandy loam soils are found throughout the site. Tokul soils are related with glacial Till. Glacial Till is also mapped within the USGS Geologic maps for this site.

Infiltration cannot be used as a primary component of stormwater management due to the relative density of site soils.

Detailed physical and chemical properties of these soils are presented in Section 4.1. The NRCS mapping can be seen in Figure 5.

2.2.8 Field Inspection

The site has not been visited recently. All inspection has been conducted via remote sensing.

2.2.9 Upstream Analysis

The site is at a local high point in the area. No upstream basin flows onto the site.

2.2.10 Downstream Analysis

The downstream area was established by tracing analysis of a LIDAR surface model and evaluation of various GIS data, aerial imagery, and City of Marysville Drainage Inventory. Two onsite basins are present on site. The basins on site are named West and East Basin respective to their location within the site. The Basins meet within West Fork Quilceda Creek more than ¼ mile as measured from the shortest path away.

Stormwater from West Basin flows to the southwest between property lines before reaching an existing ditch, which flows south and is parallel to the west property boundary. The ditch turns east at the southwest corner of the site. There is an existing 8" concrete culvert at the end of the ditch. The ditch is then conveyed through the culvert and across 172nd Street NE. Stormwater flows along the storm system within 172nd Street NE ROW and then within a bypass conveyance system along 11th Ave NE. The storm system eventually discharges to West Fork Quilceda Creek south of the high school stadium.

East Basin flows east to an existing ditch, which is within Burlington Northern RR ROW. Stormwater flows southeast along the ditch and across 172nd Street NE ROW via an existing 12" concrete culvert. Stormwater then drains to an existing ditch which flows northeast along the railroad. The two basins eventually meet within West Fork Quilceda Creek which portion flows along the RR ROW.

Figure 3 shows a portion of the downstream flow path.

2.3 MR #2: Stormwater Pollution Prevention Plans (SWPPPs)

MMC 14.15.050 (2) specifies the requirements for development and redevelopment projects are responsible for preventing erosion and discharge of sediment and other pollutants into receiving waters. Volume I, Chapter 2.5.2 of the 2019 SMMWW specifies that all new development and redevelopment implement a Stormwater Pollution Prevention Plans (SWPPP), which is a list of 13 elements that present measures and methods for all permanent and temporary erosion and sediment control (TESC), pollution prevention, inspection/monitoring activities, and recordkeeping required during the proposed construction project.

Based on the MR#2 thresholds, this project generates more than 2,000 *square feet* of impervious area, so a full SWPPP is required. Required elements for the SWPPP:

- SWPPP element 1: Preserve vegetation/mark clearing limits
- SWPPP element 2: Establish construction access
- SWPPP element 3: Control flow rates
- SWPPP element 4: Install sediment controls
- SWPPP element 5: Stabilize soils
- SWPPP Element 6: Protect slopes
- SWPPP element 7: Protect permanent drain inlets
- SWPPP element 8: Stabilize channels and outlets
- SWPPP element 9: Control pollutants
- SWWP element 10: Control dewatering
- SWPPP element 11: Maintain best management practices
- SWPPP element 12: Manage the project
- SWPPP element 13: Protect On-Site Stormwater Management BMPs for Runoff from Roofs and Other Hard Surfaces

The SWPPP is assembled as a separate document for portability and reproduction purposes. The document is titled "**Stormwater Pollution Prevention Plan for MJS Investors**", dated 10 July 2024.

2.4 MR #3: Source Control of Pollution

MMC 14.15.050 (3) specifies the requirements for water pollution source control for new development or redevelopment activities in accordance with Volume IV of the SMMWW. These activities are primarily commercial industrial developments that represent significant pollutant generation potential and the associated source control BMPs are designed to suit those activities.

Per Chapter 2.5.3, MR#3 does not apply to residential development, hence such source controls are not specified for this project.

2.5 MR #4: Preservation of Natural Drainage Systems and Outfalls

MMC 14.15.050 (4) specifies the requirements for preservation of natural drainage systems or outfalls for all new development and redevelopment activities under Minimum Requirement 4 in the 2019 SMMWW.

Natural drainage patterns as they once existed shall be retained. Pre-developed conditions experience a sheet drainage pattern to the site's west and east property boundary. Stormwater generated onsite reaches the property boundary through infiltration or surface runoff prior to being intercepted by exiting ditches. Existing discharge location shall be maintained.

2.6 MR #5: On-Site Stormwater Management

MMC 14.15.050 (5) specifies requirements for on-site stormwater BMPs. This requirement mandates that on-site stormwater runoff be infiltrated, dispersed, and/or retained to the maximum extent feasible without causing flooding or erosion impacts. Projects triggering Minimum Requirements 1 through 5 must use On-site stormwater management BMPs from List #1 for all surfaces or demonstrate compliance with the LID Performance Standard. Projects triggering Minimum Requirements 1 through 9 must meet the requirements of Table 2.5.1 in Vol. 1 of the 2019 SMMWW. Table 2.5.1 specifies the requirements for new or redevelopment depending on UGA and parcel size to meet the requirements of the LID Performance Standard and/or List #2. List #1 and List #2 specify stormwater BMPs in order of preference. The first BMP determined feasible is required.

<u>This project trigger MR's 1-9.</u> This project is within the City's UGA. This project is required to adhere to the LID Performance Standard or List #2 per Table 2.5.1.

List #1 and #2 contain appropriate BMPs to mitigate a particular developed surface. The surfaces included in the list are Lawn and Landscaped Areas, Roofs, and other hard surfaces (road/driveway/parking).

> Lawn/Landscape is required to utilize BMP T5.13, Post-Construction Soil Quality and Depth.
>
> Roofs are required to employ BMP T5.30 Full Dispersion or Downspout Infiltration, Rain Gardens or Bioretention, BMP T5.10A Downspout Dispersion Systems, or perforated stub-out connections. The first feasible BMP in this list must be used.
>
> Other Hard surfaces (Roads, Driveways, Parking Lots, Etc.) must utilize BMP T5.30 Full Dispersion, BMP T5.15 Permeable Pavement, Bioretention, Sheet Flow Dispersion, or Concentrated Flow Dispersion. The first feasible BMP in this list must be used.

Lawn/landscape will utilize BMP T5.13, Post Construction Soil Quality and Depth.

Roofs will not be able to provide BMP T5.30 Full Dispersion. Full Dispersion requires 100-*foot* flow paths within native areas. The project will not be able to maintain 65% open space.

Individual Lot Infiltration is not feasible based on the low-permeability of native soils. Most roofs will be ultimately routed to bioretention areas for treatment and flow control.

BMP T5.10B Downspout Dispersion will not be utilized as each individual lot lacks the prescriptive flow path length. BMP T5.10C perforated stub out connections are also not feasible due to the close proximity of sewer, water, gas, electricity, and cable utilities on these narrow 40 ft wide lots. Perforated stub outs are also not permitted to be installed beneath driveways.

Onsite stormwater BMPs are infeasible.

Road and Driveway/Parking will be routed to bioretention areas, BMP T7.30. The bioretention cells will treat stormwater through filtering, phytoremediation, and microbial action from within the compost.

Permeable pavement will not be used as the pavement areas are likely to have long-term excessive sediment deposition after construction and homeowner turnover. Permeable pavement

may also be constructed over the top of compacted structural fill that does not exhibit infiltration rates consistent with the requirements for this BMP.

A site plan showing the stormwater management and development can be seen in Figure 4.

2.7 MR #6: Runoff Treatment

Minimum Requirement #6 in MMC 14.15.050 (6) specifies the requirements for providing runoff treatment. The threshold for requiring a treatment BMP is 5,000 *square feet* of PGIS (Pollution Generating Impervious Surface) or a total of more than ¾ of an acre of PGPS (Pollution Generating Pervious Surface).

This project is expected to generate 303,086 *square feet* (6.96 *acres*) of PGIS based on road, sidewalk and driveway areas, therefore treatment facility BMPs are required for this project.

Runoff treatment facility selection is outlined in Vol. III-1.2 of the 2019 SMMWW. Figure III-1.1 outlines the treatment facility selection flow chart based on the intended use of a project. Treatment selection is based on if the site is a high-use site, if the downstream receiving waters are phosphorous sensitive, and/or if the site is required to provide enhanced treatment. The definitions of high-use, phosphorous control, and enhanced treatment can be found in Section III-1.2 of the 2019 SMMWW.

The project is not a high use site.

The project is not required to treat for phosphorous.

Enhanced treatment is not required for the project.

Enhanced and Basic treatment is provided through the use of a bioretention facility per Vol. III Section 3.3.12 of the 2019 SMMWW. The bioretention specified will provide enhanced treatment. The bio-cell treats stormwater through the infiltration of stormwater through soils and their ability to absorb pollutants. On-site soils are suitable for use. See Vol III. Section 3.3.12 of the 2019 SMMWW for specific soil design criteria.

The project utilizes bioretention cells for treatment. The bioretention cell mitigates polluted stormwater through physical, chemical and biological treatment processes. The treatment process reduces pollutant loads to downstream receiving waters. Stormwater percolates through compost amended soils and plantings to obtain treatment. The total percolated runoff through each bio-cell's amended soils is well over the 91% total runoff volume treatment requirement. See Section 7.

2.8 MR #7: Flow Control

Minimum Requirement #7 in MMC 14.15.050 (7) specifies the requirements for runoff flow control. The threshold for requiring Minimum Requirement #7 is 5,000 *square feet* of impervious surface. Flow control shall be provided if the project creates more than 10,000 *square feet* of effective impervious area in a threshold discharge area, converts ¾ of an acre or more of native vegetation to lawn, 2.5 *acres* or more native vegetation is converted to pasture, or a combination of impervious and converted pervious surfaces cause a 0.1 *cfs* increase in the 100-*year* flow frequency from a continuous simulation runoff model.

The project exceeds this requirement and is required to provide flow control.

All runoff from impervious surfaces and converted surfaces is preferred to be infiltrated if feasible. Standard flow control requires that stormwater discharges match pre-developed discharge durations for the range of pre-developed discharge rates from 50% of the 2-year peak flow to the 50-year peak flow. The pre-developed condition shall be matched to the fully-forested condition (soils and vegetation) to which the Western Washington Hydrologic Model (WWHM) is calibrated, unless reasonable, historic information is provided that indicates the site was prairie prior to Euro-American settlement. This requirement may also be met by Full dispersion and infiltration. This standard requirement is waived for sites that will reliably infiltrate all the runoff from hard surface and converted vegetation areas.

The site stormwater management practices detention of stormwater generated on site. A small portion of the frontage and rooftops bypass facilities for detention. These bypasses are included in the stormwater model. The site as a whole still meets the flow control threshold requirement.

The site is split into two overall basins, West and East.

Stormwater generated in West Basin flows to Bioretention Cell A, C and D. Bioretention Cell A, C and D release stormwater to a proposed stormwater system within 11th Ave NE ROW.

Stormwater generated in East Basin flows to Bioretention Cell B. The discharge of the cell is to a level spreader.

The combination of bioretention cells A,B,C and D meet compliance with flow-control standard of 50% of the 2-year to the 50% predeveloped stormwater flows.

All bioretention cells are comprised of 1.5 *feet* of bioretention soil media. Those cells utilize ponded area with freeboard to allow stormwater to percolate through the amended soils. Percolated stormwater drains to a filter layer, and then to a storage chamber consisting of 0.5 *ft* to 9.0 *ft* of rock. The rock layer is drained through a perforated underdrain.

See Section 7 for bioretention cells, planter bioswales and rooftop modeling parameters.

2.9 MR #8: Wetlands Protection

Appendix I-C of 2019 SMMWW specifies requirements for discharge of stormwater in wetlands and wetland buffers as well as discharge of stormwater to a stream.

There is no detention and treatment in the critical areas. The west basin discharges to an onsite wetland buffer to the west. The east basin discharges from a control structure to an onsite wetland buffer within the site boundary. The onsite wetland buffer is associated with an offsite wetland to the north. The project requires Wetlands protection.

Minimum Requirement #8 requires that stormwater discharges to wetlands within a projects TDA shall meet a specified Level of Wetland Protection. There are four Wetland Protection Levels that apply to the TDA: General Protection, Protection from Pollutants, Wetland Hydroperiod protection Method 1, and Method 2.

Both General Protection and Protection from Pollutants wetland protection levels are satisfied with the proper implementation of Minimum Requirement #2 and Minimum Requirement #5 & #6, respectively. The general protection and Pollutant protection requirements are listed below. Documentation of project compliance is listed below each item in italics.

General protection Requirements

1. Consult regulations issued under federal and state laws that regulate the discharge of pollutants to surface waters, including the Construction Stormwater General NPDES Permit.
   See CA Report.
2. Maintain the wetland buffer required by local and/or state regulations.
   Wetland Buffers are established and maintained.
3. Retain areas of native vegetation connecting the wetland and its buffer with nearby wetlands and other contiguous areas of native vegetation.
   All native vegetation within the buffer is retained and enhanced.
4. Avoid compaction of soil and introduction of invasive plant or animal species in the wetland and its buffer.
   No buffer intrusion is proposed. Construction fencing will be in place during construction and split rail fence installed at project completion.
5. Take measures to avoid general physical impacts (e.g., littering and vegetation destruction). Examples are protecting existing buffer zones; discouraging access, especially by vehicles, by planting outside the wetland, and encouragement of stewardship and signage by landowners.
   Signage and fencing is a permanent element to dissuade physical impacts from the uninformed public.
6. Any stormwater management practices, such as Runoff Treatment or Flow Control BMP implementation, must be done outside of the wetland buffer boundary, except limited circumstances where the wetland and/or buffer may be used for additional Runoff Treatment and/or Flow Control of stormwater
   No stormwater flow control or treatment is conducted in the wetland or buffer.

7. Discharge from a BMP or project site should be dispersed using a method to diffuse the flow before entering the wetland buffer.
   All stormwater flow is dispersed prior to reaching the wetland.
8. Consider fences to restrict human access, but make sure it doesn't interfere with wildlife movement. They should be used when wildlife passage is not a major issue and the potential for intrusive impacts is high. When wildlife movement and intrusion are both issues, the circumstances will have to be weighed to make a decision about fencing. Check with the local and/or state agencies to determine if fencing would be allowed.
   Split rail fence is proposed/required. The functionality of split rail fence is to dissuade human interference and permit wildlife passage.

Protection from Pollutants

1. Provide Construction Stormwater BMPs as directed in MR2 to prevent sediment and other pollutants from entering the wetland.
   See TESC Plan prepared with Civil Construction Plans along with SWPPP document.
2. Provide Source Control BMPs as directed in I-3.4.3 MR3: Source Control of Pollution. Refer to Volume IV and local jurisdiction requirements.
   No Source Control BMPs required for Residential Development. See MR #3 in this report.
3. Provide On-Site Stormwater Management and use LID principles as much as practicable for the site, as directed in MR5: On-Site Stormwater Management. LID principles and practices will help meet other wetland hydroperiod protection criteria and provide additional habitat.
   All efforts to provide a stormwater system reminiscent of LID BMPs for the exposure of stormwater to the native soil column is provided, to the maximum extent feasible for this high-density single family residential development.
4. Provide Runoff Treatment BMPs as directed in MR6: Runoff Treatment to treat runoff prior to entering the wetland and its buffer.
   MR #6 is satisfied by the incorporation of Bioretention cell systems with underdrains and rock detention storage beneath each cell.

Wetland Hydroperiod Protection Requirement:

The wetland hydroperiod protection is separated into two Methods (Methods 1 and 2).

Method 1 shall be applied to Category I and II depressional or riverine impounding wetlands.

Method 2 shall be applied to Category III or IV wetlands with habitat score greater than 5.

The onsite wetland to the west is a Category III wetland with 4 habitat score. The off-site wetland is a Category III wetland with 5 habitat score. (Sewall Wetland Consulting, Inc., 2024) The wetland does not require wetland hydroperiod protection.

2.10 MR # 9: Operation and Maintenance

Minimum Requirement #9 specified MMC 14.15.050 (9) contains requirements for inspection, operation and maintenance of stormwater facilities and BMPs. Specific maintenance standards and requirements are outlined in Volume V of the 2019 SMMWW. The 2019 SMMWW requires the regular maintenance and inspection of drainage facilities.

For portability and reproduction purposes, the Operations and Maintenance Manual is presented in a separate stand-alone document titled "**Operations and Maintenance Manual for Lakewood Heights PRD"**, dated **10 July 2024.** This document will be provided with the construction plan submittal.

4.1 Soils Data

1—Alderwood gravelly sandy loam, 0 to 8 percent slopes

Map Unit Setting
National map unit symbol: 2t625
Elevation: 50 to 800 feet
Mean annual precipitation: 25 to 60 inches
Mean annual air temperature: 48 to 52 degrees F
Frost-free period: 160 to 240 days
Farmland classification: Prime farmland if irrigated
Map Unit Composition
*Alderwood and similar soils:*85 percent
*Minor components:*15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.
Description of Alderwood
Setting
*Landform:*Hills, ridges
*Landform position (two-dimensional):*Summit
*Landform position (three-dimensional):*Crest, talf
*Down-slope shape:*Convex, linear
*Across-slope shape:*Convex
*Parent material:*Glacial drift and/or glacial outwash over dense glaciomarine deposits
Typical profile
A - 0 to 7 inches: gravelly sandy loam
Bw1 - 7 to 21 inches: very gravelly sandy loam
Bw2 - 21 to 30 inches: very gravelly sandy loam
Bg - 30 to 35 inches: very gravelly sandy loam
2Cd1 - 35 to 43 inches: very gravelly sandy loam
2Cd2 - 43 to 59 inches: very gravelly sandy loam
Properties and qualities
*Slope:*0 to 8 percent
*Depth to restrictive feature:*20 to 39 inches to densic material
*Drainage class:*Moderately well drained
*Capacity of the most limiting layer to transmit water (Ksat):*Very low to moderately low (0.00 to 0.06 in/hr)
*Depth to water table:*About 18 to 37 inches
*Frequency of flooding:*None
*Frequency of ponding:*None
Available water supply, 0 to 60 inches: Very low (about 2.7 inches)
Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: B
Ecological site: F002XA004WA - Puget Lowlands Forest
Forage suitability group: Limited Depth Soils (G002XN302WA), Limited Depth Soils (G002XF303WA), Limited Depth Soils (G002XS301WA)

Other vegetative classification: Limited Depth Soils (G002XN302WA), Limited Depth Soils (G002XF303WA), Limited Depth Soils (G002XS301WA)
Hydric soil rating: No
Minor Components
Mckenna
*Percent of map unit:*5 percent
*Landform:*Drainageways, depressions
*Landform position (three-dimensional):*Dip
*Down-slope shape:*Linear, concave
*Across-slope shape:*Concave
Hydric soil rating: Yes
Everett
*Percent of map unit:*5 percent
*Landform:*Moraines, eskers, kames

*Across-slope shape:*Concave
Hydric soil rating: Yes
Norma
*Percent of map unit:*2 percent
*Landform:*Drainageways, depressions
*Landform position (three-dimensional):*Dip
*Down-slope shape:*Linear, concave
*Across-slope shape:*Concave
Hydric soil rating: Yes

27—Kitsap silt loam, 0 to 8 percent slopes
Map Unit Setting
National map unit symbol: 2hyh
Elevation: 0 to 490 feet
Mean annual precipitation: 37 inches
Mean annual air temperature: 50 degrees F
Frost-free period: 160 to 200 days
Farmland classification: All areas are prime farmland
Map Unit Composition
*Kitsap and similar soils:*85 percent

*Minor components:*5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.
Description of Kitsap
Setting
*Landform:*Terraces
*Parent material:*Lacustrine deposits
Typical profile
H1 - 0 to 6 inches: ashy silt loam
H2 - 6 to 33 inches: silt loam
H3 - 33 to 60 inches: stratified silt to silty clay loam
Properties and qualities
*Slope:*0 to 8 percent
*Depth to restrictive feature:*More than 80 inches
*Drainage class:*Moderately well drained
*Capacity of the most limiting layer to transmit water (Ksat):*Moderately low to moderately high (0.06 to 0.20 in/hr)
*Depth to water table:*About 18 to 30 inches
*Frequency of flooding:*None
*Frequency of ponding:*None
Available water supply, 0 to 60 inches: High (about 11.4 inches)
Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C
Ecological site: F002XA004WA - Puget Lowlands Forest
Forage suitability group: Soils with Few Limitations (G002XF503WA)
Other vegetative classification: Soils with Few Limitations (G002XF503WA)
Hydric soil rating: No
Minor Components
Bellingham, undrained
*Percent of map unit:*5 percent
*Landform:*Depressions
*Other vegetative classification:*Wet Soils (G002XN102WA)

Hydric soil rating: Yes

5.1 Topographic Data

- The various on and off site topography, utilities, and drainage elements were professionally surveyed by Pacific Coast Surveying in 2019.
- Snohomish County 2003 LiDAR survey was used to augment the existing site topography and the downstream and surrounding areas.

The modeled coordinate system:
Lateral - Washington State Plan Plane - North, FIPS 4601;
Vertical – NAVD 88

Section 6 - Continuous Simulation Modeling

6.1 Continuous Simulation Background

HSPF based continuous simulation modeling was used to evaluate the hydrologic performances of the pre-developed and developed sub-basins in order to accurately assess flow rates.

The currently adopted continuous simulation models use the HSPF (Hydraulic Simulation Program in FORTRAN) software engine. The HSPF model uses a robust and detail accounting of the 'water budget', including evaporation, evapotranspiration, interception, interflow, and groundwater. The modeling accounts for and assesses land segment areas that include vegetation or impervious cover, soil types, and slopes. The modeling also uses utilized over 50 years of continuous rainfall data (precipitation) and evaporation data for the area. The HSPF continuous modeling is considered the best available science for hydrologic analysis.

6.2 Modeling Methodology

HSPF modeling was managed via the Western Washington Hydrology Model (WWHM) interface program. The current professional version of WWHM by Clearcreek Solutions, Inc., WWHM-2012 was used. The current data precipitation and evaporation set provided by DOE with the WWHM-2012 software interface was used that includes quantized data in 15-minute time steps from October 1948 to October 2009.

The WWHM program comes packaged with generic, well considered HSPF modeling parameters. These settings allow for the modeling of the majority of the topological conditions found in the Puget Sound area. Where conditions fall reasonably outside the range of the default HSPF parameters, adjustments should be made to more accurately reflect those conditions. These is generally limited to the pervious land segments (IMPLNDS) and are mostly limited to slopes (SLSUR), infiltration rates (INFILT), and length of flow path (LSUR). For this project, HSPF parameters were not adjusted to reflect site conditions.

6.2.1 Existing Conditions

The surface vegetative cover is assumed fully forested with an average slope of 5% in the area of development, based on the LIDAR based TIN analysis. The LIDAR model represents the pre-graded conditions and is in accordance with the predeveloped requirements to be represented as native vegetation and soils that existed at a site prior to the influence of Euro-American settlement.

The NRCS soil mapping of Tokul gravelly medial loam within the modeled area is listed as Type C hydrologic soils. Land segments of Forest Flat, Mod are representative of the existing site areas. Wetland buffer is mapped as Forest, Flat. The wetland area itself is modeled in the WWHM as Sat Forest, Flat.

6.2.2 Developed Conditions

Default mapping for flat road was used for the road areas. Roof was for the rooftop areas. Driveway was for the driveway areas and sidewalk for the paths. Pasture was used for the amended soils from DOE recommendations for amended soils modeling. The intent of the modeling of this site was to determine the infiltration and treatment efficiencies of the bio-retention cell. Flow control modeling took place for the bypass area that is unable to be introduced to street system.

It should be noted that when ponds, bio-swales, or other open detention facilities are used, the corresponding WWHM analysis module includes the ponded area. Consequently, this area is not included in the basin land segment mappings so the total area is often different between the developed and pre-developed conditions.

The current DOE specification for amended soils in 2019 is labeled as 'SMMWW' in the Bio-Swale and other WWHM modules that employ amended soils. The parameters for modeling the SMMWW are preset and based on current state-of-the-art modeling using a combination of the Darcy's and Van Genuchten's equations to account for the variability of permeability and water content as the soils transition from dry or partly damp to saturated conditions as the bio-cell cycles through the process of filling, emptying, and drying out. The SMMWW settings based on the WSU amended soils.

Section 7 - Software Output

The following WWHM reports in this section represent individual sub-basin analysis for hydrologic flow evaluations. The following heading is common to all reports.

Surface	**Interflow**	**Groundwater**
Surface Celll 995	Surface Celll 995	

Name : Cell 996
Bottom Length: 290.00 ft.
Bottom Width: 8.00 ft.
Material thickness of first layer: 1
Material type for first layer: SMMWW 12 in/hr
Material thickness of second layer: 0
Material type for second layer: Sand
Material thickness of third layer: 0
Material type for third layer: GRAVEL
Underdrain used
Underdrain Diameter (feet): 0.5
Orifice Diameter (in.): 1
Offset (in.): 0
Flow Through Underdrain (ac-ft.): 169.413
Total Outflow (ac-ft.): 182.601
Percent Through Underdrain: 92.78
Discharge Structure
Riser Height: 0.5 ft.
Riser Diameter: 12 in.
Orifice 1 Diameter: 0.5 in. **Elevation:** 0.01 ft.

Element Flows To:

Outlet 1	**Outlet 2**
Gravel Trench Bed C

Name : Surface Cell 996

Element Flows To:

Outlet 1	**Outlet 2**
Gravel Trench Bed C	Cell 996

Name : Celll 995
Bottom Length: 110.00 ft.
Bottom Width: 10.00 ft.
Material thickness of first layer: 1
Material type for first layer: SMMWW 12 in/hr
Material thickness of second layer: 0
Material type for second layer: Sand
Material thickness of third layer: 0
Material type for third layer: GRAVEL
Underdrain used
Underdrain Diameter (feet): 0.5
Orifice Diameter (in.): 0.8
Offset (in.): 0
Flow Through Underdrain (ac-ft.): 48.08
Total Outflow (ac-ft.): 49.173
Percent Through Underdrain: 97.78
Discharge Structure
Riser Height: 0.5 ft.
Riser Diameter: 12 in.
Orifice 1 Diameter: 1.6 in. **Elevation:** 0.02 ft.

Element Flows To:

Outlet 1 **Outlet 2**
Gravel Trench Bed D

Name : Gravel Trench Bed C
Bottom Length: 595.00 ft.
Bottom Width: 33.00 ft.
Trench bottom slope 1: 0.1 To 1
Trench Left side slope 0: 0.1 To 1
Trench right side slope 2: 0.1 To 1
Material thickness of first layer: 4
Pour Space of material for first layer: 0.42
Material thickness of second layer: 0
Pour Space of material for second layer: 0
Material thickness of third layer: 0
Pour Space of material for third layer: 0
Discharge Structure
Riser Height: 3.6 ft.
Riser Diameter: 18 in.
Notch Type: Rectangular
Notch Width: 1.300 ft.
Notch Height: 0.040 ft.
Orifice 1 Diameter: 1.5 in. **Elevation:** 0 ft.

Element Flows To:
Outlet 1 **Outlet 2**

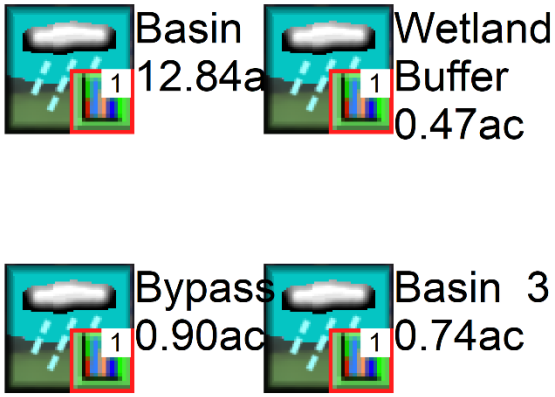
7.2 East Basin

Project Name: East Basin0 626 -WSDOT
Site Name: Gemmer PRD
Site Address: 1125 172nd St NE
City : Marysville, WA
Report Date: 6/26/2024
Gage : Everett
Data Start : 1948/10/01
Data End : 2009/09/30
Precip Scale: 1.00
Version Date: 2023/01/27
Version : 4.2.19

Low Flow Threshold for POC 1 : 50 Percent of the 2 Year

High Flow Threshold for POC 1: 50 year



PREDEVELOPED LAND USE

Name : Basin 1
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	7.338
C, Forest, Mod	5.501
Pervious Total	12.839

Impervious Land Use	acre
Impervious Total	0
Basin Total	12.839

Element Flows To:
Surface **Interflow** **Groundwater**

Name : Wetland Buffer
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	.465
Pervious Total	0.465

Impervious Land Use	acre
Impervious Total	0
Basin Total	0.465

Element Flows To:

Surface	Interflow	Groundwater

Name : Basin 3
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	.736
Pervious Total	0.736

Impervious Land Use	acre
Impervious Total	0
Basin Total	0.736

Element Flows To:

Surface	Interflow	Groundwater

Name : Bypass
Bypass: No

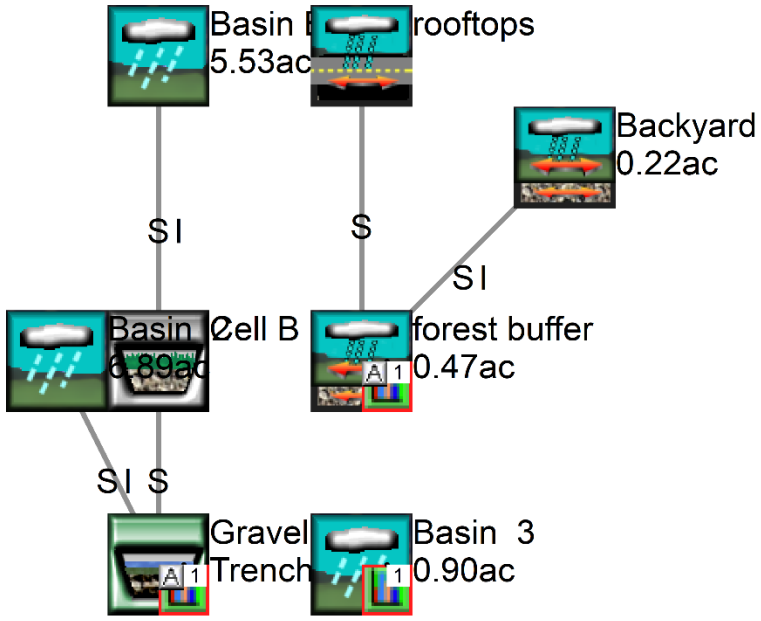
GroundWater: No

Pervious Land Use	acre
C, Forest, Flat	.895
Pervious Total	0.895

Impervious Land Use	acre
Impervious Total	0
Basin Total	0.895

Element Flows To:

Surface	Interflow	Groundwater



MITIGATED LAND USE

Name : Basin B
Bypass: No

GroundWater: No

Pervious Land Use	acre
C, Pasture, Flat	.946
Pervious Total	**0.946**

Impervious Land Use	acre
ROADS FLAT	2.084
DRIVEWAYS FLAT	1.469
SIDEWALKS FLAT	1.034
Impervious Total	**4.587**
Basin Total	**5.533**

Element Flows To:

Surface	Interflow	Groundwater
Surface Cell B	Surface Cell B	

Name : Cell B
Bottom Length: 850.00 ft.
Bottom Width: 10.00 ft.
Material thickness of first layer: 1.5
Material type for first layer: SMMWW 12 in/hr
Material thickness of second layer: 0

Material type for second layer: Sand
Material thickness of third layer: 0
Material type for third layer: GRAVEL
Underdrain used
Underdrain Diameter (feet): 0.5
Orifice Diameter (in.): 2.5
Offset (in.): 0
Flow Through Underdrain (ac-ft.): 742.83
Total Outflow (ac-ft.): 776.272
Percent Through Underdrain: 95.69
Discharge Structure
Riser Height: 0.5 ft.
Riser Diameter: 12 in.
Notch Type: Rectangular
Notch Width: 0.125 ft.
Notch Height: 0.400 ft.
Orifice 1 Diameter: 0.2 in. **Elevation:** 0 ft.

Element Flows To:
Outlet 1 **Outlet 2**
Gravel Trench Bed 1

Name : Surface Cell B

Element Flows To:

Outlet 1	**Outlet 2**
Gravel Trench Bed 1	Cell B

Name : forest buffer
Bypass: Yes

GroundWater: No

Pervious Land Use	**acre**
C, Forest, Flat	**.465**

Element Flows To:

Surface	**Interflow**	**Groundwater**

Name : rooftops
Bypass: No

Impervious Land Use	**acre**
ROOF TOPS FLAT LAT	**0.513**

Element Flows To:

Outlet 1	**Outlet 2**
forest buffer	

Name : Gravel Trench Bed 1
Bottom Length: 2515.00 ft.
Bottom Width: 14.00 ft.
Trench bottom slope 1: 0.1 To 1
Trench Left side slope 0: 0.1 To 1
Trench right side slope 2: 0.1 To 1
Material thickness of first layer: 9
Pour Space of material for first layer: 0.42
Material thickness of second layer: 0
Pour Space of material for second layer: 0
Material thickness of third layer: 0
Pour Space of material for third layer: 0
Discharge Structure

Riser Height: 8.6 ft.
Riser Diameter: 18 in.
Orifice 1 Diameter: 1.4 in. **Elevation:** 0 ft.
Orifice 2 Diameter: 0.1 in. **Elevation:** 6 ft.

Element Flows To:
Outlet 1 **Outlet 2**

TECHNICAL MEMORANDUM

DATE: May 22, 2024

TO: Jesse Hannahs, P.E.
City of Marysville

FROM: Chandler Waldal
TENW

SUBJECT: Supplemental Traffic Assessment for Gemmer Residential
Gemmer Residential – Marysville, WA
TENW Project No. 2023-205

This technical memorandum provides supplemental traffic analysis for the proposed *Gemmer Residential* project in response to City comments regarding the *Gemmer Residential Traffic Impact Analysis* (TENW, November 15, 2023). Specifically, the comments from the City indicated the following:

- *Future year traffic volumes from the Gemmer Residential TIA were estimated by applying a 3% annual growth rate to the existing 2023 traffic counts. Given that development pipeline data exists within the subject area, provide supplemental future year 2036 (horizon year) PM peak hour traffic volumes and subsequent level of service (LOS) analysis that includes 2% growth plus the addition of 13 pipeline projects at the 27th Ave NE/172nd Street NE and 19th Ave NE/172nd Street NE study intersections.*
- *The Gemmer Residential TIA assumed the 19th Ave NE/172nd Street NE intersection would be a roundabout by 2036 (horizon year). While the 19th Ave NE/172nd Street roundabout improvement project is required as mitigation for the Lodge V and English Crossing Developments, it shall not be assumed that either is constructed in the 2036 (horizon year) analysis as developments cannot be assured to move forward. Provide supplemental traffic analysis that assumes the 19th Ave NE/172nd Street NE intersection is two-way stop-controlled by 2036 (horizon year).*

Based on subsequent discussions and communication with the City of Marysville staff, it was confirmed that a technical memorandum documenting supplemental 2036 (horizon year) traffic analyses at the two (2) study intersections would be required.

Purpose and Background

The proposed *Gemmer Residential* project is located east of 11th Ave NE and north of 172nd Street NE and will include up to 185 Single-Family Detached homes. The existing site includes one (1) existing Single-Family Detached home that would be removed with the proposed project. Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located southeast of the site.

The *Gemmer Residential* project site vicinity is shown in Attachment A.

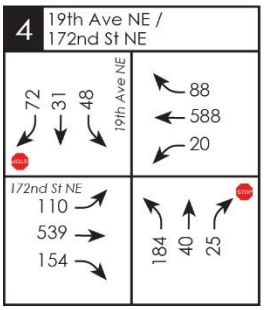
The purpose of this technical memorandum is to provide the City with supplemental traffic analyses at two (2) of the study intersections analyzed in the *Gemmer Residential TIA*.

The supplemental traffic analysis at these two (2) study intersections includes the following updates:

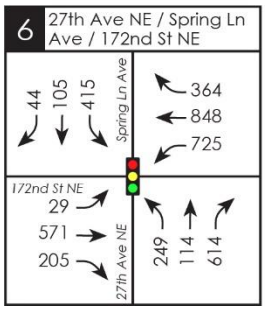
- Forecast supplemental 2036 (horizon year) PM peak hour traffic volumes with the addition of 13 new pipeline projects and a 2% annual growth rate applied to the 2023 PM peak hour traffic volumes documented in the *Gemmer Residential TIA, 2023*.
- Evaluate level of service (LOS) at the two-way stop-controlled 19th Ave NE/172nd Street NE intersection with the 2036 (horizon year) PM peak hour volumes documented in the *Gemmer Residential TIA* (3% growth) and with the supplemental traffic volumes documented in this report (2% growth + pipeline).
- Evaluate LOS at the 27th Ave NE/172nd Street NE intersection with 2036 PM peak hour volumes documented in the *Gemmer Residential TIA, 2023* (3% growth) and with the supplemental traffic volumes documented in this report (2% growth + pipeline).

The *Gemmer Residential Traffic Impact Analysis* (TENW, November 15, 2023) is included in Attachment B.

Supplemental Traffic Volumes

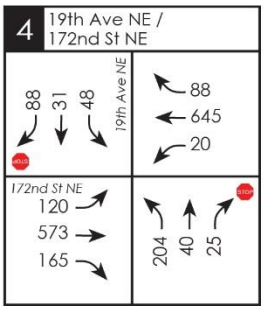


To estimate the future 2036 (horizon year) No Action PM peak hour traffic volumes at the 19th Ave NE/172nd Street NE and 27th Ave NE/172nd Street NE intersections, a 2% annual growth rate was applied to the 2023 existing traffic volumes documented in the *Gemmer Residential TIA, 2023*. In addition to the 2% annual background growth rate, PM peak hour trips from the following pipeline projects (as directed by the city) were included in the future No Action traffic volumes:

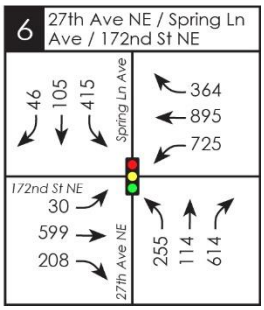


1. English Crossing
2. Marysville 172
3. Marysville 10 Degrees
4. The Lodge IV
5. The Lodge V
6. Josephine
7. Vaness PRD
8. MI5 Business Park
9. Kendall Auto Group Service
10. Sather Farms
11. Cascade Commerce Center Phase 1
12. Marysville Industrial
13. Northsound Industrial Park

Consistent with the *Gemmer Residential TIA*, 25 percent of traffic on 172nd Street NE east of 19th Ave NE was diverted to the south through the Lakewood Neighborhood to account for future planned roadway improvements in the vicinity, namely the planned 156th Street NE/I-5 interchange project which is expected to shift existing traffic off 172nd Street NE.



The 2036 (horizon year) No Action PM peak hour traffic volumes do not include any of the new trips generated by the proposed *Gemmer Residential* project at the study intersections. To determine the future year 2036 (horizon year) With Project PM peak hour traffic volumes, the net new project-generated trips documented in the *Gemmer Residential TIA, 2023* were added to the future no action volumes to obtain future with project traffic volumes. The resulting supplemental 2036 (horizon year) No Action and With Project traffic volumes are shown below and detailed volume forecasts are included in Attachment C.



2036 No Action

2036 With Project

Supplemental Level of Service Analysis

Future year 2036 (horizon year) PM peak hour LOS analyses were conducted at the two (2) study intersections using the supplemental 2036 (horizon year) No Action and With Project PM peak hour traffic volumes. LOS calculations were based on the use of *Synchro 12* traffic analysis software. LOS methodology is included in Attachment D.

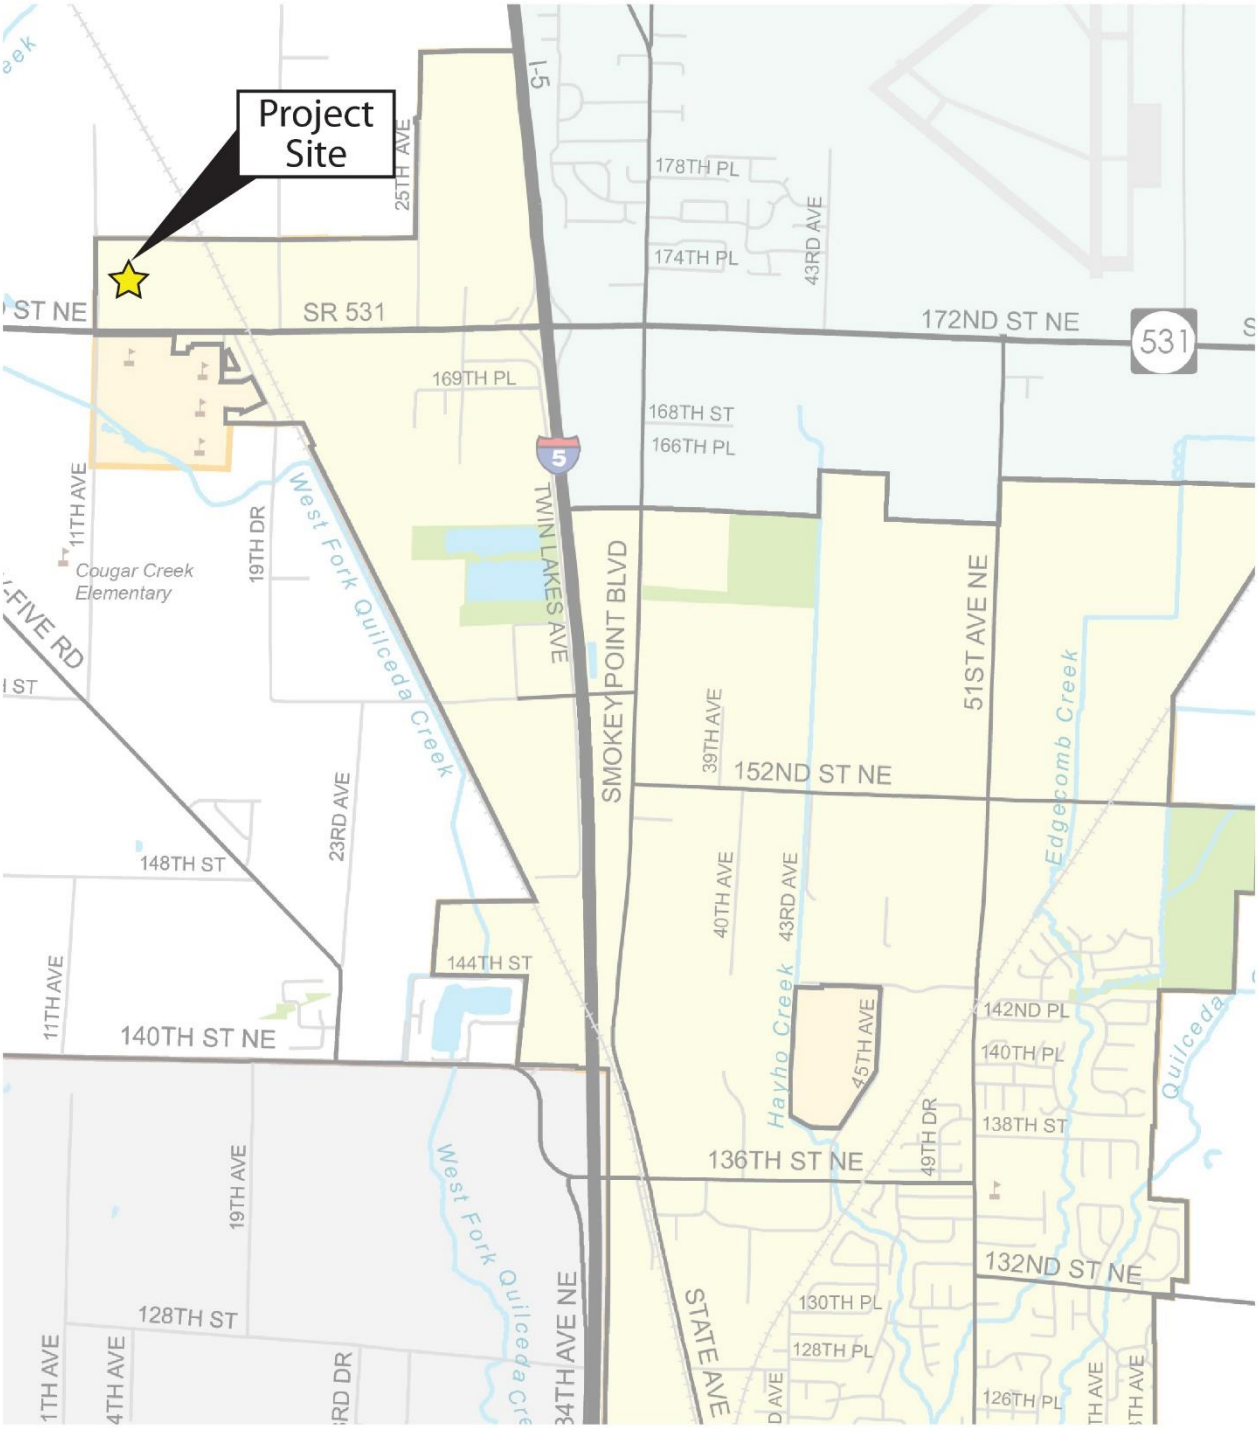
Table 1 summarizes the future year 2036 (horizon year) PM peak hour LOS analysis results at the two (2) study intersections for the supplemental No Action and With Project conditions in the PM peak hour. Additionally, LOS analysis results with the 2036 (horizon year) traffic volumes documented in the *Gemmer Residential TIA* are summarized in Table 1 for purposes of comparison. Detailed LOS calculation sheets are included in Attachment D.

Table 1
Year 2036 Weekday PM Peak Hour LOS Summary

	2036 No Action				2036 With Project			
	Supplemental Analysis (2% growth + pipeline)		Gemmer Residential TIA (3% growth)		Supplemental Analysis (2% growth + pipeline)		Gemmer Residential TIA (3% growth)	
Intersection	LOS	Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)
Two-Way Stop-Controlled								
4. 172nd Street NE / 19th Ave NE								
Northbound Approach	F	>100	F	>100	F	>100	F	>100
Eastbound Left-Turn	A	9.7	A	9.6	B	10.1	B	10.0
Westbound Left-Turn	A	9.3	A	9.4	A	9.4	A	9.6
Southbound Approach	F	>100	F	>100	F	>100	F	>100
Signalized								
6. 172nd Street NE / 27th Ave NW	E	56.9	E	67.3	E	55.8	E	65.8

The City of Marysville and WSDOT intersection LOS standard is LOS D with one exception; the City of Marysville *Traffic Impact Analysis Guidelines* state that WSDOT intersections on the 172nd Street NE (SR 531) corridor which have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E. This is the case at the intersection of 127th Ave NE/172nd Street NE. Therefore, as shown in **Table 1**, the 27th Ave NE/172nd Street NE intersection is expected to meet the applicable LOS standard during the weekday PM peak hour in 2036 (horizon year) with the proposed project.

The 172nd Street NE/19th Ave NE intersection is expected to operate at LOS F in 2036 (horizon year) during the weekday PM peak hour without or with the proposed project based on its current configuration with stop control on the north and south side-street approaches. It should be noted that a future roundabout is identified at this intersection on the City of Marysville's 2024-2029 Transportation Improvement Plan (Marysville TIP Project #24). Additionally, this improvement is required as a condition of approval for both the Lodge Apartments and English Crossing projects. As documented in the *Gemmer Residential TIA,* the 172nd Street NE/19th Ave NE intersection is expected to operate at LOS A in 2036 (horizon year) during the weekday PM peak hour without or with the proposed project as a roundabout.



If you have any questions regarding the information presented in this supplemental traffic assessment, please contact me at chandler@tenw.com or (760) 994-7376.

FINDINGS/CONCLUSIONS

This traffic impact analysis (TIA) has been prepared for the proposed *Gemmer Residential* project located in the Lakewood area of the City of Marysville, WA.

Project Proposal. The proposed *Gemmer Residential* project site is located east of 11th Ave NE and north of 172nd Street NE. The proposed project will include up to 185 Single-Family Detached homes. The site includes one (1) existing Single-Family Detached home that would be removed with the proposed project.

Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located southeast of the site.

Trip Generation. The *Gemmer Residential* project is estimated to generate 1,762 net new weekday daily trips, with 129 net new trips (32 in, 97 out) occurring during the AM peak hour and 184 net new trips (116 in, 68 out) occurring during the PM peak hour.

Future City Road Plans. The City of Marysville has identified several future road improvements, intersections, and connections in the vicinity of the project site. These connector roads are identified on the City's Comprehensive Plan, City's Lakewood Neighborhood Plan, the City's six-year 2023-2028 Transportation Improvement Plan (TIP), and/or the City's traffic impact fee program. And it should be noted that portions of some of these City improvements would be completed by the *Gemmer Residential* project as mitigation, which is further described in the Mitigation section below.

Intersection Level of Service (LOS). The City of Marysville and WSDOT LOS standard at all study intersections is LOS D with one exception, as noted in the City of Marysville *Traffic Impact Analysis Guidelines,* which state that intersections on the 172nd Street NE (SR 531) corridor that have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E.

The intersection LOS analyses documented in this report were assessed during the weekday PM peak hour at eight (8) off-site study intersections. All study intersections are anticipated to meet the applicable LOS standards in 2030 (buildout year) and 2036 (horizon year) during the weekday PM peak hour without or with the proposed *Gemmer Residential* project with two (2) exceptions:

- 11th Ave NE / 172nd Street NE (LOS F in 2030 and 2036, without or with project): The City has identified a roundabout at this intersection in their transportation improvement plan (TIP #25). The *Gemmer Residential* project will construct a new single-lane roundabout (or a portion of a new roundabout) at this intersection as mitigation. As a single-lane roundabout, the intersection is anticipated to operate at LOS B in 2036 without or with the proposed project during the PM peak hour.
- 19th Ave NE / 172nd Street NE (LOS E in 2030, with project): The City has identified a roundabout at this intersection in their transportation improvement plan (TIP #24). The new roundabout is required as a condition of approval for the Lodge Apartments project. As such, this improvement is assumed to be completed by 2036 (when the 156th Street NE Interchange project is complete) and is expected to operate at LOS A in 2036 as a future roundabout, without or with the project. Therefore, no mitigation is proposed at this intersection with the *Gemmer Residential* project.

Site Access Evaluation. The LOS results indicate that the individual movements at the proposed site access intersection are expected to operate at LOS A with minimal queuing during the weekday PM peak hour in 2030 (buildout year) and 2036 (horizon year).

Mitigation. The following measures have been identified to mitigate traffic impacts of the *Gemmer Residential* project.

- City of Marysville Traffic Impact Fees. The City of Marysville requires payment of transportation impact fees to help fund planned roadway improvements throughout the City. Transportation impact fees for the proposed *Gemmer Residential* project were calculated based on the trip generation estimate documented in this TIA and the City of Marysville's currently adopted transportation impact fee rate of $6,300 per PM peak hour trip.

  The proposed *Gemmer Residential* project is estimated to generate 184 net new PM peak hour trips. As a result, the estimated City of Marysville transportation impact fee is **$1,159,200** ($6,300 X 184 PM peak hour trips). Actual impact fees will be calculated by the City at the time of building permit issuance.

- Snohomish County Mitigation. The City of Marysville and Snohomish County have adopted an interlocal agreement whereby developments in Marysville must assess potential mitigation for impacts on Snohomish County roadway facilities. Mitigation fees to Snohomish County are based on predetermined distribution percentages according to location or specific project impacts to planned roadway improvements.

  Mitigation fees to Snohomish County were estimated with application of the standard distribution percentage based on the project location (20%) multiplied by the daily trip generation (1,762 net new daily project trips) and adopted cost per ADT ($185 for residential developments within TSA A and the UGA). The resulting Snohomish County transportation impact fee is **$65,194**. A mitigation offer form to Snohomish County will be submitted separately.

- Future City Road Plans. The *Gemmer Residential* project would build a portion of the following City planned improvements:

  - Construct and dedicate right-of-way for the northern half-street of a 3-lane section on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. Construct frontage improvements including new curb, gutter, sidewalk, and street lighting on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. It should be noted that it is anticipated the applicant would receive transportation impact fee credit for frontage and roadway improvements on 172nd Street NE.
  - Construct frontage improvements on 11th Ave NE from 172nd Street NE to the northern site property line including new curb, gutter, sidewalk, and street lighting.
  - Construct a new roundabout (or a portion of a new roundabout) at 11th Ave NE / 172nd Street NE. Credit toward City transportation impact fees is expected with the anticipated addition of this roundabout to the next adoption of the City's six-year TIP.

INTRODUCTION

This traffic impact analysis (TIA) has been prepared for the proposed *Gemmer Residential* project located in the Lakewood area of the City of Marysville, WA. The proposed project will include up to 185 Single-Family Detached homes. A site vicinity map is provided in Figure 1.

Project Description

The proposed project will include up to 185 Single-Family Detached homes. The site includes one (1) existing Single-Family Detached home that would be removed with the proposed project.

Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located southeast of the site. A preliminary site plan is shown in Appendix A.

Traffic Scoping & Study Area

The scope of work for this Traffic Impact Analysis was prepared consistent with City of Maryville's adopted Traffic Impact Analysis guidelines (June 2023) and confirmed by the City during the scoping process. A total of eight (8) off-site study intersections were identified for evaluation during future weekday PM peak hour conditions in 2030 (buildout year) and 2036 (horizon year):

1. 11th Ave NE / 172nd St NE
2. Gas Station Access / 172nd St NE
3. 19th Dr NE / 172nd St NE
4. 19th Ave NE / 172nd St NE
5. 23rd Ave NE /172nd St NE
6. 27th Ave NE /172nd St NE
7. I-5 SB Ramps /172nd St NE
8. I-5 NB Ramps /172nd St NE

Project Approach

To analyze the traffic impacts of the *Gemmer Residential* development, the following tasks were undertaken:

- Assessment of existing conditions through field reconnaissance and review of existing planning documents.
- Estimation of weekday vehicular AM peak hour, PM peak hour, and weekday daily trips generated by the development.
- Evaluation of weekday PM peak hour level of service (LOS) at eight (8) off-site study intersections.
- Analyzed the weekday PM peak hour operations at the proposed site access intersection including LOS and queues. Review of City planning documents to evaluate long-term road improvements plans in project vicinity.
- Documentation of trip impacts at Snohomish County Key Intersections.
- Summary of mitigation including transportation impact fees to City of Marysville and Snohomish County, and construction of local roadway improvements adjacent to the site.

Primary Data and Information Sources

- City of Marysville *Traffic Impact Analysis Guidelines,* June 2023.
- *Highway Capacity Manual (HCM 7th Edition)*, 2022.
- 2023 weekday PM peak period traffic counts, All Traffic Data (ATD).
- City of Marysville 2023-2028 Six Year Transportation Improvement Plan (TIP).
- *City of Marysville Comprehensive Plan – Transportation Element*, 2015.
- *Snohomish County Traffic Worksheet and Traffic Study Requirements for Developments in the City of Marysville*, October 2015.

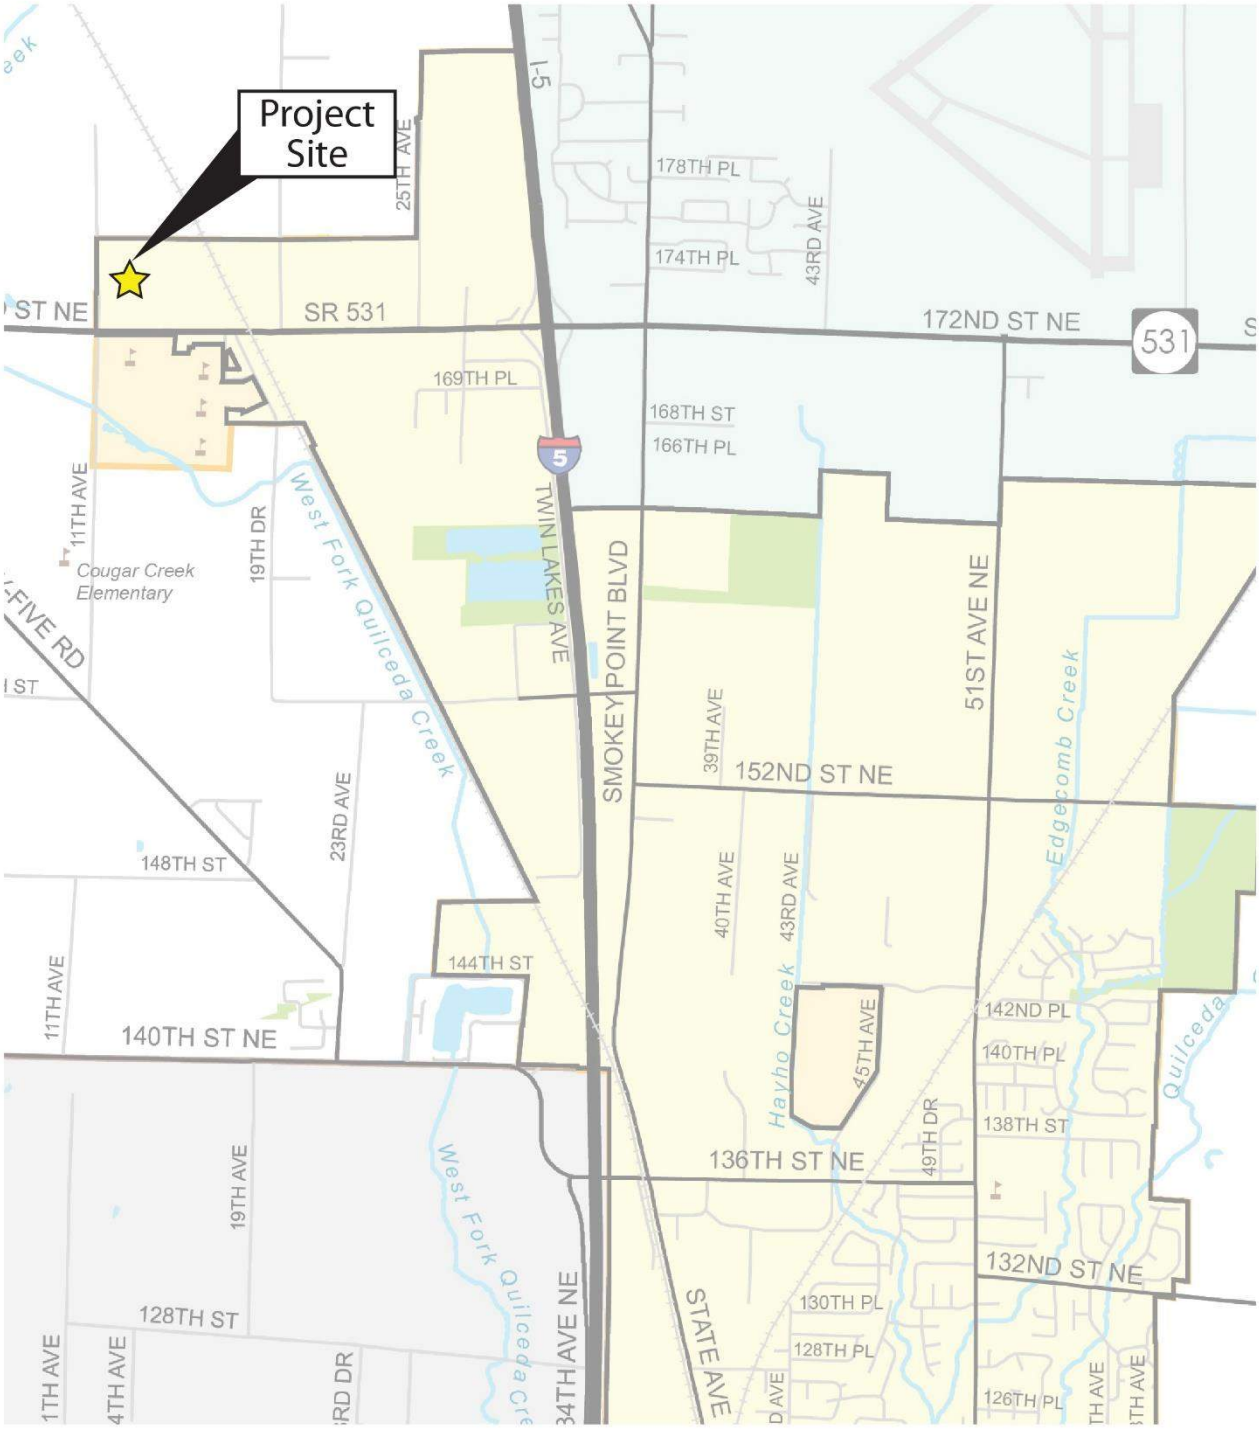

Figure 1: Project Site Vicinity

EXISTING CONDITIONS

This section describes existing transportation system conditions in the study area. Existing conditions described include an inventory of existing roadways, public transportation services, non-motorized transportation facilities, existing traffic volumes, and intersection levels of service (LOS).

Roadway Network

The existing street characteristics in the vicinity of the proposed *Gemmer Residential* project are described below in Table 1.

Table 1
Existing Roadway Network Summary – Project Site Vicinity

Roadway	Orientation	Classification	Speed Limit	Number of Travel Lanes	Street Parking	Sidewalks	Bicycle Facilities
172nd St NE (SR 531)	East-West	State Highway	35 mph	3 - 4	None	Intermittent	Intermittent Bike Lanes
11th Ave NE	North-South	Local Street	25 mph	2	None	None	None

Transit Service

Transit service in the project site vicinity is provided by Community Transit. The closest bus stop is located on 172nd Street NE at 11th Ave NE. The bus stop provides access to Community Transit Route 240 which provides service between Stanwood Downtown Park & Ride and Smokey Point Transit Center throughout the day with approximately 1-hour headways.

Non-motorized Transportation Facilities

Non-motorized transportation facilities in the project site vicinity include a mix of sidewalks and paved shoulders. Existing pedestrian activity is minimal in the project vicinity based on recent PM peak period traffic counts.

Collision History

Historical collisions at the eight (8) off-site study intersections and seven (7) roadway segments were analyzed for the three-year period from 2020 to 2022. Collision data was provided by WSDOT. Summaries of the total and yearly average collisions during this period at the off-site study intersections are provided in Table 2. Summaries of collisions by type at the off-site study intersections are provided in Table 3. Summaries of the total and yearly average collisions along the roadway segments are provided in Table 4.

The detailed collision history is included in Appendix B.

Table 2
Collision Data Summary, January 1, 2020, to December 31, 2022

Roadway Segment	2020	2021	2022	3-Year Total Collisions	Avg. Annual Collisions	Est. AWDT[1]	Collisions per MEV[2]
1) 11th Ave NE / 172nd St NE	1	2	1	4	1.33	10,580	0.35
2) Gas Station Access / 172nd St NE	0	0	0	0	1.00	10,310	0.00

I-5 SB Ramps and I-5 NB Ramps	3	11	7	21	7.00	31,060	0.62	3.63

Source: WSDOT Collision Records.
[1] AWDT = Average Weekday Daily Traffic. Estimated daily volumes are based on 2023 PM volumes and a K-factor of 10.
[2] MEV = Million Entering Vehicles.
[3] MVM = Million Vehicle Miles.

Per the City of Marysville's *Traffic Impact Analysis Guidelines* (June 2023) intersection collision rates over 1.0 collision per MEV and roadway segment collision rates over 10.0 collisions per MEV generally warrant further review to determine if any patterns exist. Based on the collision data, none of the eight (8) off-site study intersections have rates that exceed 1.0 collision per MEV. Additionally, none of the seven (7) roadway segments have rates that exceed 10.0 collisions per MEV or 10.0 collisions per MVM.

Traffic Volumes

Existing weekday PM peak hour traffic volumes at the eight (8) off-site study intersections were based on counts conducted by All Traffic Data in October 2023. The PM peak hour represents the highest one-hour time period between 4:00 and 6:00 PM. Figure 2 illustrates the 2023 existing weekday PM peak hour traffic volumes at the eight (8) off-site study intersections. Appendix C includes the PM peak hour traffic count data sheets.

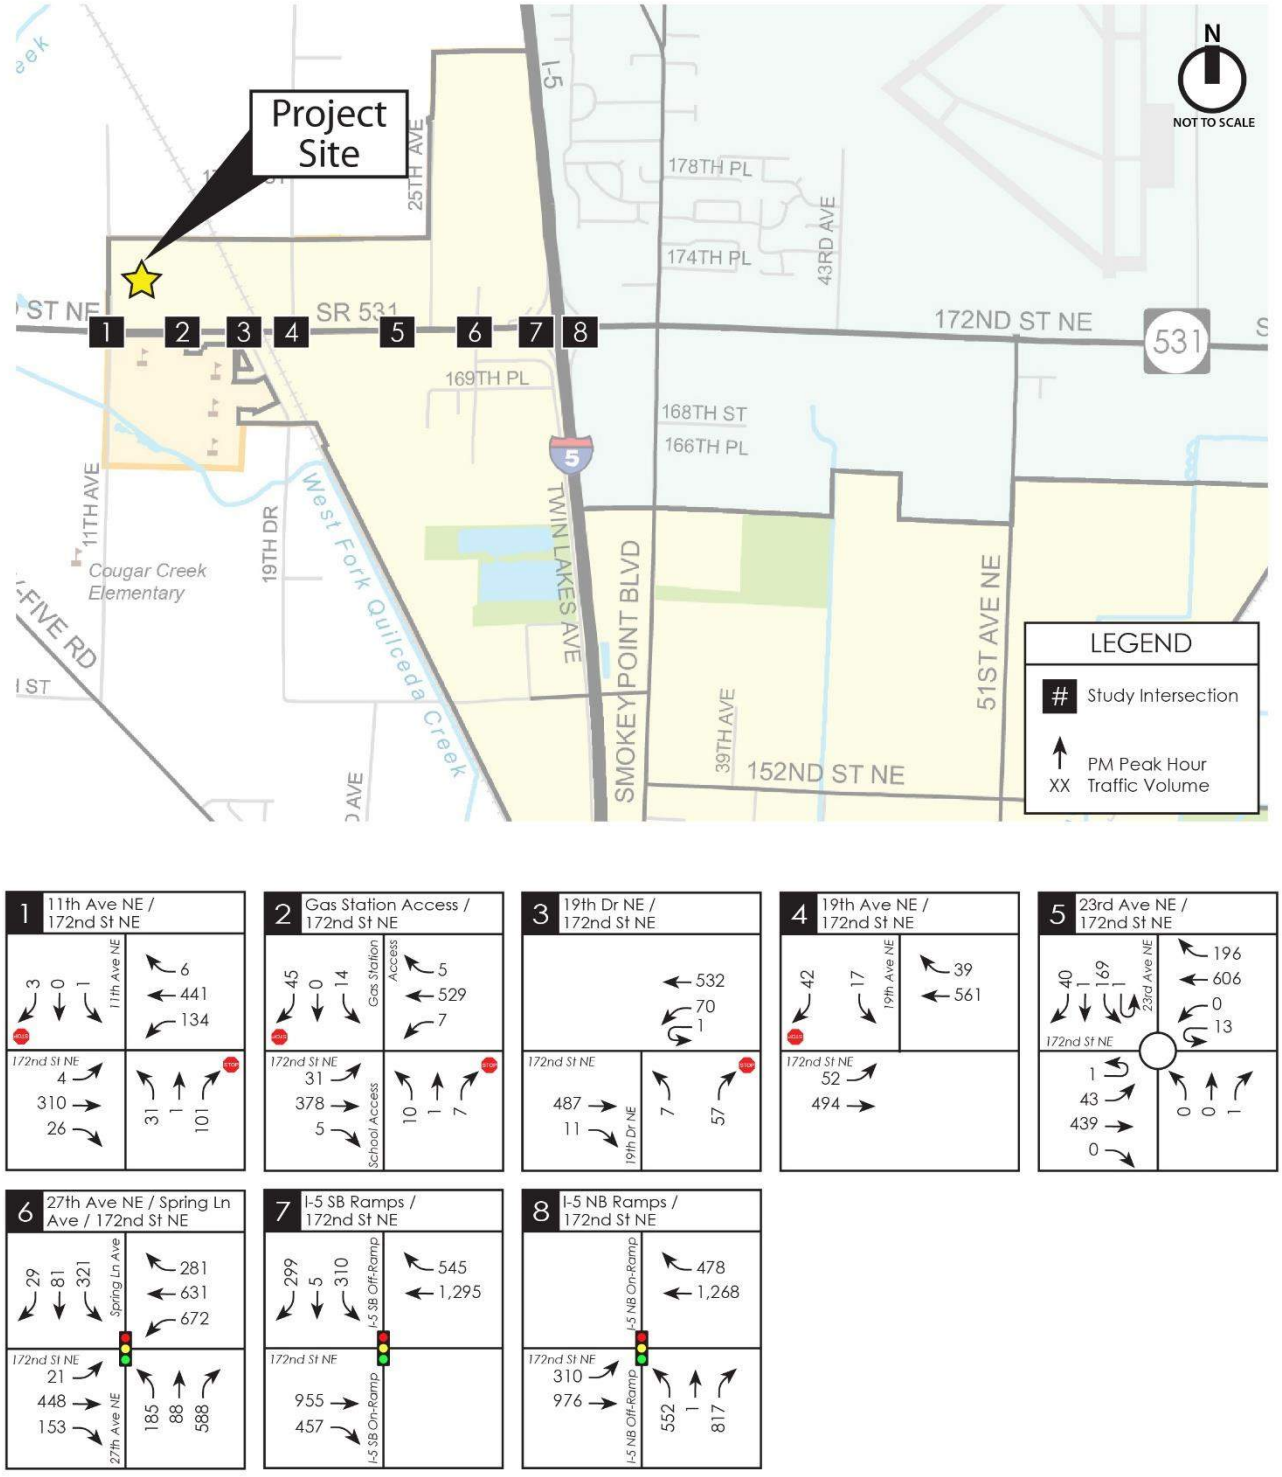

Figure 2: 2023 Existing PM Peak Hour Traffic Volumes

Intersection Levels of Service

Level of service calculations for intersections were based on the use of *Synchro 12* traffic analysis software. LOS methodology is included in Appendix C.

Existing signal timing was provided by WSDOT and City of Marysville at the signalized study intersections. Level of service calculations for the roundabout study intersections were based on WSDOT methodology and procedures outlined in the *WSDOT Sidra Policy Settings* document using *Sidra 9* traffic analysis software. The existing LOS results at the eight (8) off-site study intersections are summarized in Table 6. Detailed LOS summary worksheets are provided in Appendix D.

Table 5
2023 Existing Weekday PM Peak Hour LOS Summary

Study Intersection / Movement	LOS	Delay (sec)
Stop-Controlled Intersections:		
1) 11th Ave NE / 172nd St NE		
Eastbound Left-Turn	A	8.5
Westbound Left-Turn	A	8.5
Northbound Approach	D	32.4
Southbound Approach	C	15.5
2) Gas Station Access / 172nd St NE		
Eastbound Left-Turn	A	8.9
Westbound Left-Turn	A	8.3
Northbound Approach	C	15.8
Southbound Approach	B	14.9
3) 19th Dr NE / 172nd St NE		
Westbound Left-Turn	A	8.8
Northbound Approach	B	13.4
4) 19th Ave NE / 172nd St NE		
Eastbound Left-Turn	A	9.1
Southbound Approach	C	19.0
Roundabout:		
5) 23rd Ave NE / 172nd St NE	A	4.2
Signalized Intersections:		
6) 27th Ave NE / 172nd St NE	E	58.4
7) I-5 SB / 172nd St NE	A	7.5
8) I-5 NB / 172nd St NE	C	20.4

As shown in Table 6, all study intersections operate at LOS D or better during the weekday PM peak hour under 2023 existing conditions with the exception of the following intersection:

5. 27th Ave NE / 172nd St NE (LOS E)

The City of Marysville and WSDOT LOS standard at intersections is LOS D with one exception. The City of Marysville *Traffic Impact Analysis Guidelines* state that intersections on the 172nd Street NE (SR 531) corridor which have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E. Currently the 27th Ave NE / 172nd St NE intersection operates at LOS E, which applies to this statement.

FUTURE CONDITIONS & PROJECT IMPACTS

This section of the report describes the traffic impacts of the proposed *Gemmer Residential* project on the surrounding and adjacent road network, and at identified off-site study intersections in the project site vicinity. The analysis of traffic impacts includes a trip generation estimate, distribution/assignment of project trips, and PM peak hour LOS evaluation at the eight (8) off-site study intersections and the site access. Consideration of future planned roadway projects identified by the City of Marysville is also documented and considered in the evaluation of intersection LOS.

Future Planned Roadway Improvements

Marysville Comprehensive Plan

The Transportation Element of the *City of Marysville Comprehensive Plan 2015* includes a depiction of the functional classification of existing and planned future roadways within the City limits and adjacent jurisdictions. The planned roadways are intended to serve anticipated growth in Marysville and the surrounding area through 2035.

Marysville's Lakewood Neighborhood Master Plan

The City's Lakewood Neighborhood Master Plan (dated March 2017) cites that it is "consistent with the Marysville Comprehensive Plan and provides additional detail for the Lakewood Neighborhood. This plan focuses on the infrastructure and urban design aspects of the neighborhood."

The *Neighborhood Roadways* section of the Plan identifies roadway improvements to support growth in vehicular and non-motorized demand. The Plan further states that the neighborhood roads create network of minor and collector arterials that create a secondary network to provide alternate routes to 172nd Street NE and 27th Ave NE, and also supports the City's vision of a second I-5 interchange at 156th Street NE.

The Lakewood Neighborhood Master Plan identifies a similar system of north-south and east-west arterials (collector and minor) that were also identified in the City's Comprehensive Plan Transportation Element.

It should be noted that the roadway alignments shown in the Lakewood Neighborhood Master Plan and the City's Comprehensive Plan are intended to represent a planned roadway connection and not necessarily the exact alignment for a planned future roadway. The City's six-year Transportation Improvement Plan (TIP), which is typically adopted annually, implements the elements of the City Comprehensive Plan and Lakewood Neighborhood Plan; that plan is described next.

Marysville Transportation Improvement Plan

The City's plan for funding and implementing new roadway and intersection improvement projects that come out of the Comprehensive Plan and Neighborhood Master Plans is administered through a six-year Transportation Improvement Plan which is typically adopted and updated annually.

Based on review of the currently adopted *City of Marysville 2023-2028 Six Year Transportation Improvement Plan (TIP),* there are eight (8) planned improvements in the vicinity of the *Gemmer Residential* project that impact the off-site study intersections or connectivity of the adjacent street network.

Most of these projects are included in the City's Transportation Element of the Comprehensive Plan, the City's Lakewood Neighborhood Master Plan, and the City's Traffic Impact Fee program.

The eight (8) planned improvements in the vicinity of the *Gemmer Residential* project that impact the off-site study intersections or connectivity of the adjacent street network are as-follows:

- Marysville TIP #24 – 172nd Street NE / 19th Avenue NE Roundabout – construct new roundabout at the 19th Avenue NE / 172nd Street NE intersection. The project is anticipated to be funded by new development in the vicinity.

  Note: this improvement is required as a condition of approval for the Lodge Apartments project. Therefore, this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios (when the 156th Street NE Interchange project is complete).

- Marysville TIP #25 – 172nd Street NE / 11th Avenue NE Roundabout – construct new roundabout at the 11th Avenue NE / 172nd Street NE intersection. The project is anticipated to be funded by new development in the vicinity, and anticipated to be added to the City's funded list in the next update to the six-year TIP.

  Note: this project is not yet a condition of approval of any development and is not assumed in the future roadway network or traffic analysis herein. The Gemmer Residential project is anticipated to fund and construct a portion of this project.

- Marysville TIP #30 – 172nd Street NE: 27th Avenue NE to 19th Avenue NE – widen 172nd Street NE from a 3-lane section to a 4/5-lane section with pedestrian and bicycle facilities between 27th Avenue NE and 19th Avenue NE. The project is anticipated to be funded by new development in the vicinity.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- Marysville TIP #31 – 172nd Street NE: 11th Avenue NE to 19th Drive NE – widen 172nd Street NE from a 2-lane section to a 3-lane section with pedestrian and bicycle facilities between 11th Avenue NE and 19th Drive NE. The project is anticipated to be funded by new development in the vicinity.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor but does not change roadway geometry at any of the off-site intersections. The Gemmer Residential project is anticipated to complete a portion of this project along its' project frontage.

- Marysville TIP #36 – 172nd Street NE Railroad Crossing Improvements – widen 172nd Street NE from a 2-lane section to a 3-lane section with pedestrian and bicycle facilities and provide railroad crossing improvements.

  Note: this project is not yet a condition of approval of any development and is not otherwise funded. Therefore, this improvement is not assumed in the future roadway network.

- TIP #48 – 23rd Avenue NE & 169th Street NE – construct new 3-lane roadways including pedestrian and bicycle facilities. Connections to the existing street network would be provided at the existing roundabout at 23rd Avenue NE / 172nd Street NE and the existing western terminus of 169th Street NE. The project is anticipated to be funded and constructed by new development in the vicinity.

  Note: this project is not yet a condition of approval of any development and is not otherwise funded. Therefore, this improvement is not assumed in the future roadway network or traffic analysis herein.

- TIP #51 – 19th Avenue NE Extension from 156th Street NE to 172nd Street NE – construct new 3-lane roadway between 156th Street NE and 172nd Street NE that would include pedestrian and

bicycle facilities. The project is anticipated to be funded and constructed by new development in the vicinity.

Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- TIP #61 – 156th Street NE Interchange – convert the existing road overcrossing at 156th Street NE and Interstate 5 to a full single-point urban interchange (SPUI). The project is funded under Connecting Washington and WSDOT is the lead agency.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios only.

Project Trip Generation

Trip generation estimates associated with full buildout of the proposed *Gemmer Residential* project for weekday daily, AM peak hour, and PM peak hour were based on methodology documented in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition for Land Use Code (LUC) 210 (Single-Family Detached Housing). A weekday PM peak hour trip rate of 1.0 trip per single-family dwelling unit was used, consistent with the City scoping comments. Table 7 summarizes the net new weekday daily, AM peak hour, and PM peak hour trip generation. Detailed trip generation estimates are provided in Appendix E.

Table 6
Gemmer Residential – Trip Generation Summary

	Net New Trips Generated		
Weekday Time Period	In	Out	Total
Daily	881	881	1,762
AM Peak Hour	32	97	129
PM Peak Hour	116	68	184

Project Trip Distribution and Assignment

The distribution of project-generated trips during the weekday PM peak hour was estimated based on traffic model distribution figures provided by the City of Marysville. These figures are included in Appendix F. The model distribution was used to assign the net new weekday PM peak hour (116 inbound and 68 outbound) trips generated by the *Gemmer Residential* project to the adjacent street network. Separate distribution patterns were used for the 2030 (project buildout) and 2036 (horizon year) analyses due to anticipated changes in the roadway network in the site vicinity. The most significant change is a planned extension of 19th Avenue NE to the south (assumed by year 2036) where it will eventually connect to 156th Street NE.

Based on the trip distribution percentages, net new PM peak hour project trips were assigned through the study intersections. The distribution and assignment of the net new weekday PM peak hour trips through study intersections are shown in Figure 3 (2030 buildout) and Figure 6 (2036 horizon year).

Future Traffic Volumes

Future year 2030 and 2036 No Action PM peak hour traffic volumes were estimated by applying a three (3) percent annual growth rate to the existing traffic counts, which is consistent with City of Marysville TIA Guidelines. No additional pipeline projects were included in the 2030 and 2036 No Action volumes since a three (3) percent annual growth rate was used, which is also consistent with City of Marysville guidelines.

Based on discussions with the City of Marysville, 25 percent of traffic on 172nd Street NE east of 19th Ave NE may be diverted to the south through the Lakewood Neighborhood to account for planned roadway improvements in the vicinity, namely the planned 156th Street NE/I-5 interchange project which is expected to shift existing traffic off 172nd Street NE. Year 2036 PM peak hour traffic volumes were shifted to account for planned roadway improvements as-follows:

- 25 percent of 2036 No Action traffic volumes on 172nd Street NE were diverted to the south on 19th Ave NE and Twin Lakes Ave, and over to the future 156th Street NE interchange with I-5. Diversions were based on PM peak hour turning movement volume distribution on 172nd Ave NE west of the I-5 interchange as directed by City staff.

The resulting future 2030 (buildout year) and 2036 horizon year No Action PM peak hour traffic volumes at the eight (8) off-site study intersections are shown in Figures 4 and 7, respectively. The 2030 and 2036 With Project traffic volumes were determined by adding the trip assignment from the proposed development (shown in Figures 3 and 6) to the future 2030 and 2036 No Action traffic volumes (shown in Figures 4 and 7). The 2030 buildout year and 2036 horizon year With Project traffic volumes are shown in Figures 5 and 8, respectively.

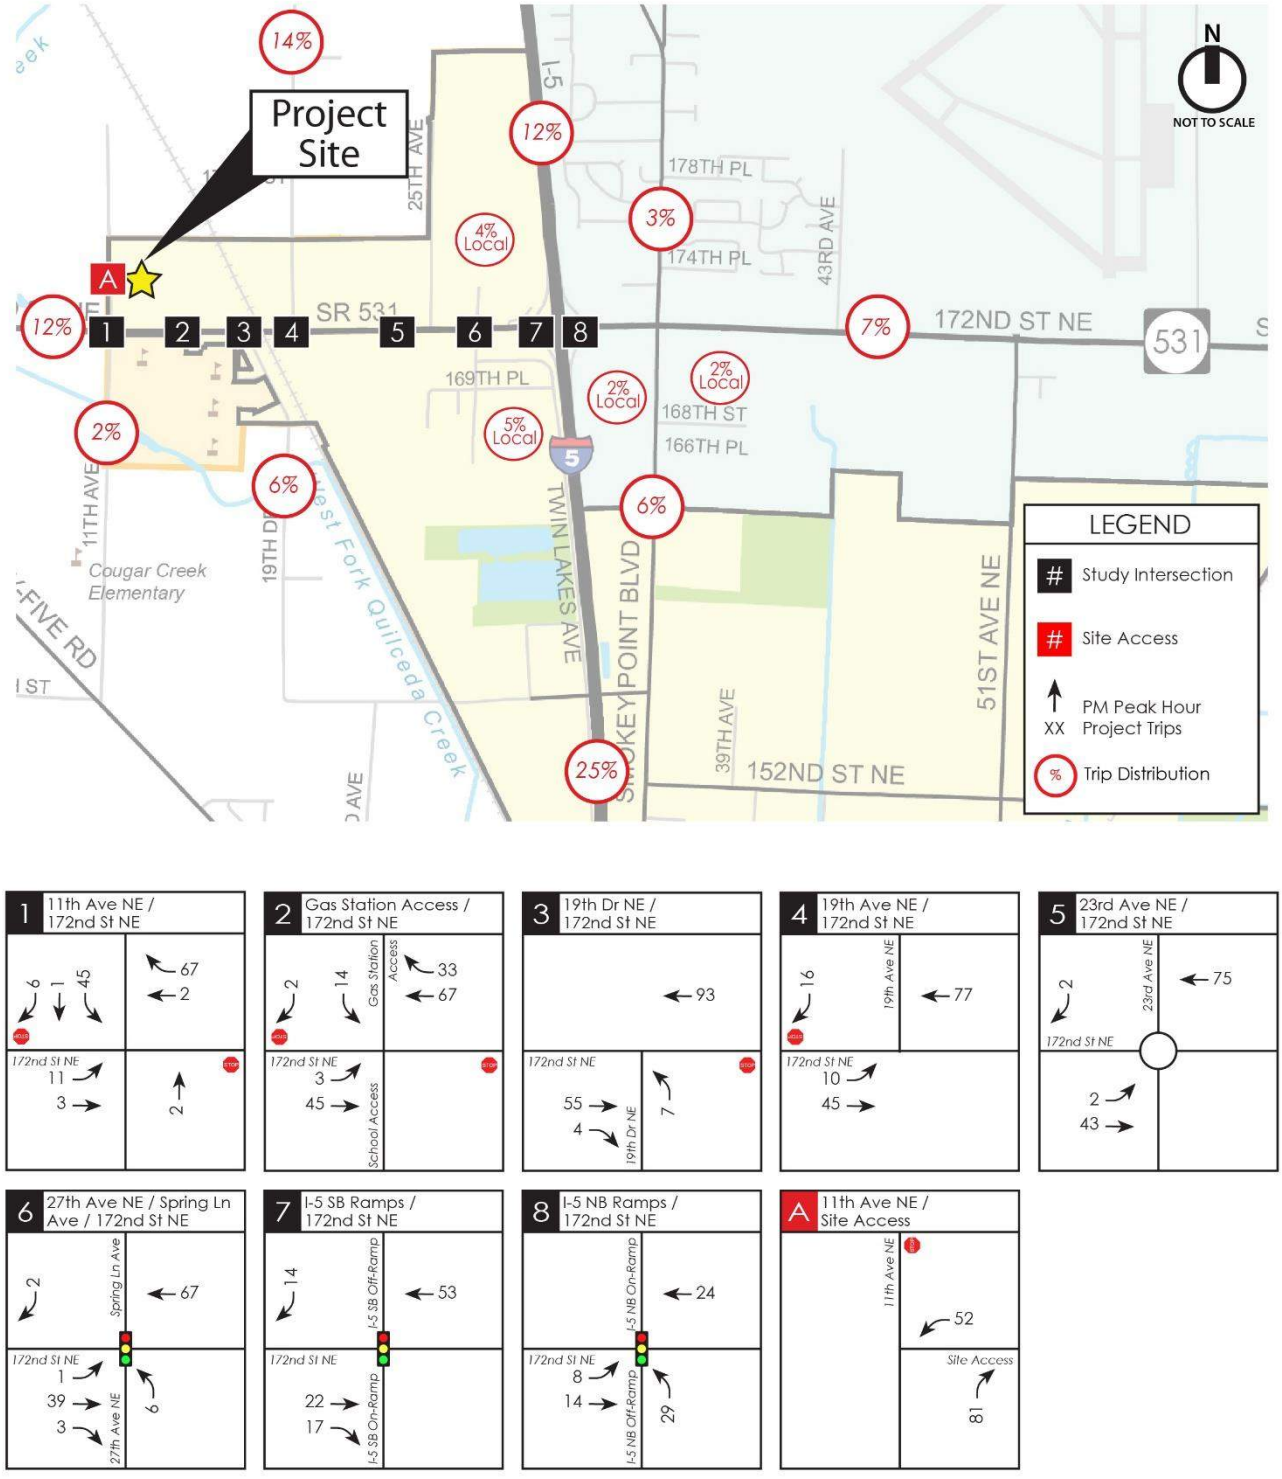

Figure 3: Weekday PM Peak Hour Project Trip Distribution and Assignment (2030 Buildout)

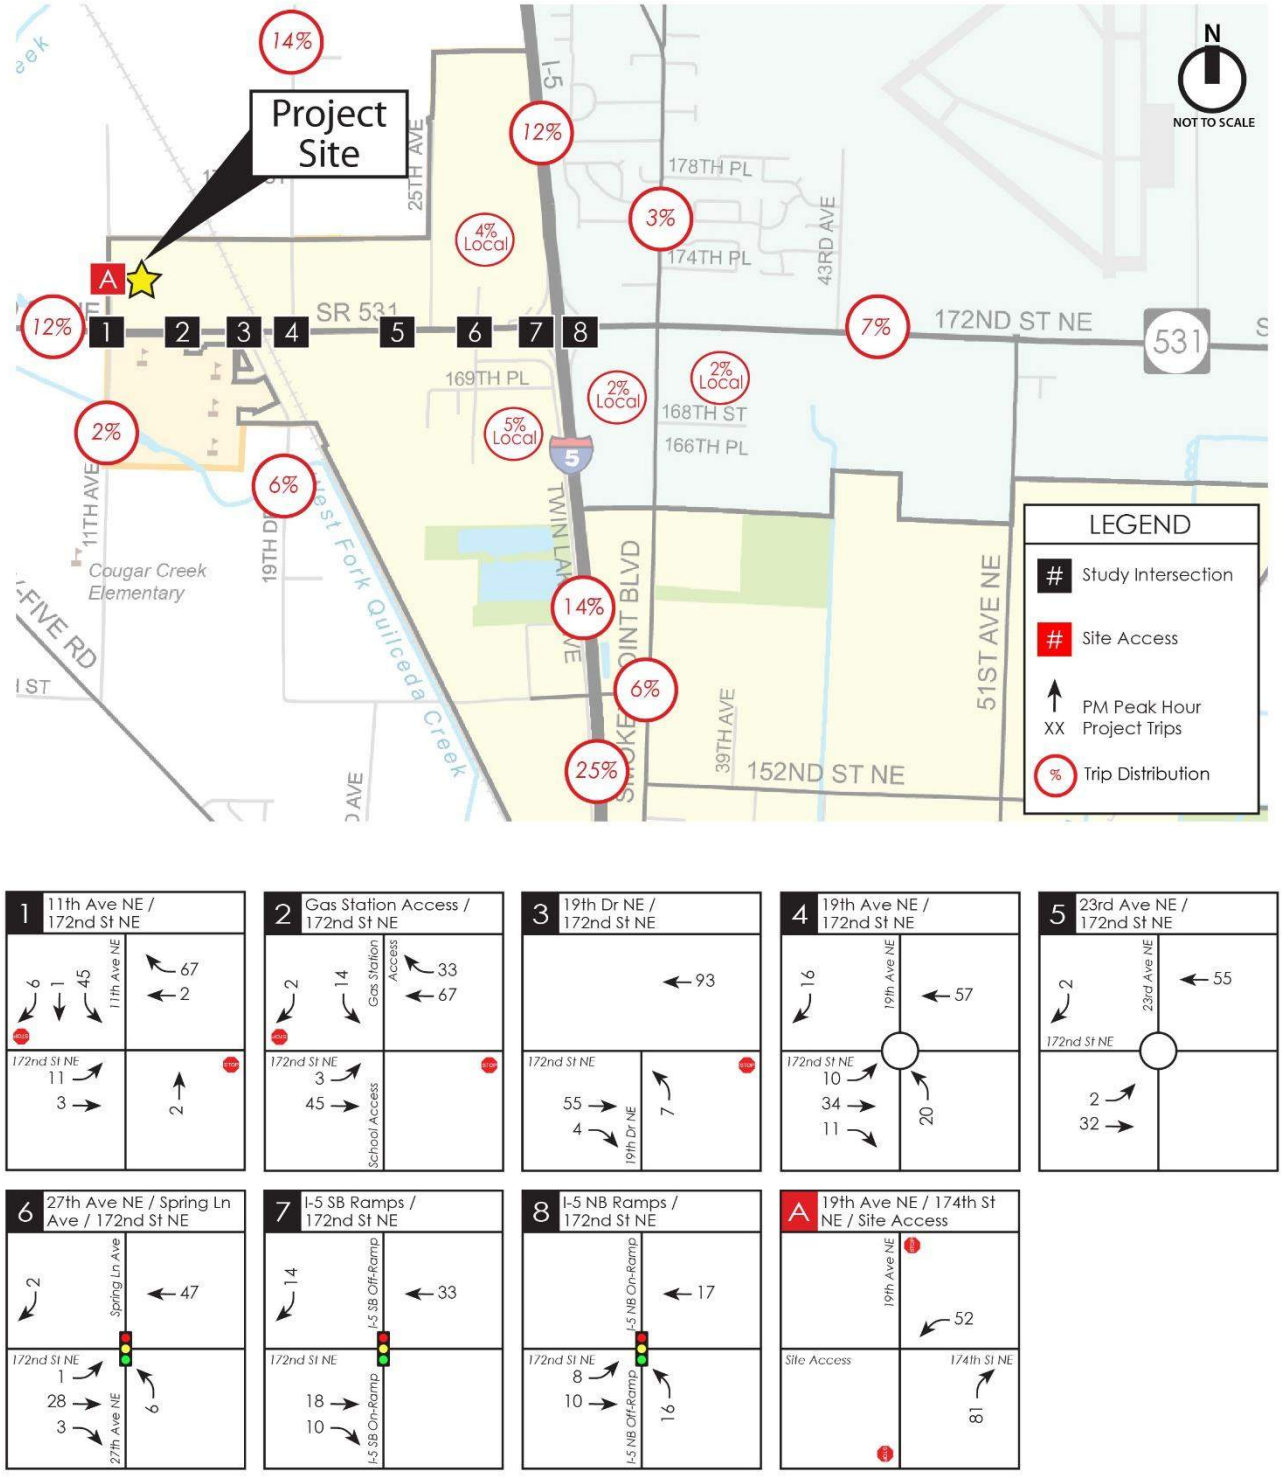

Figure 6: Weekday PM Peak Hour Project Trip Distribution and Assignment (2036 Horizon Year)

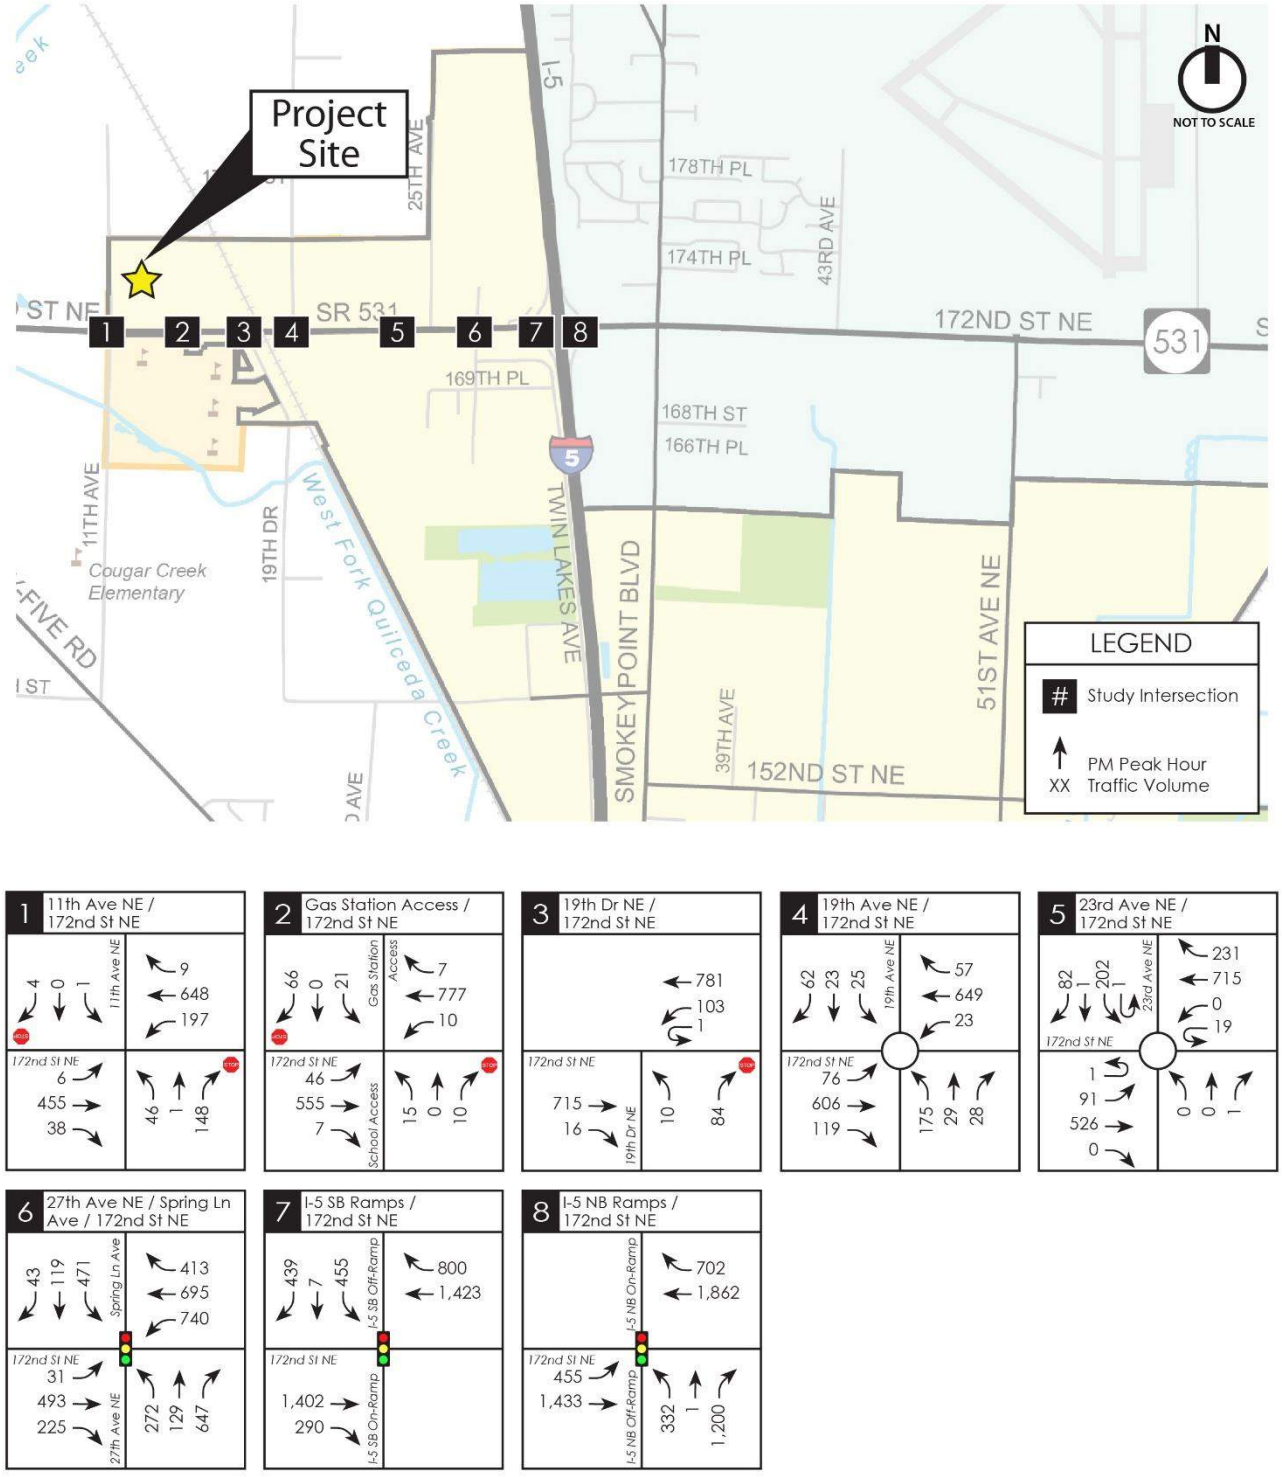

Figure 7: 2036 No Action Weekday PM Peak Hour Traffic Volumes (Horizon Year)

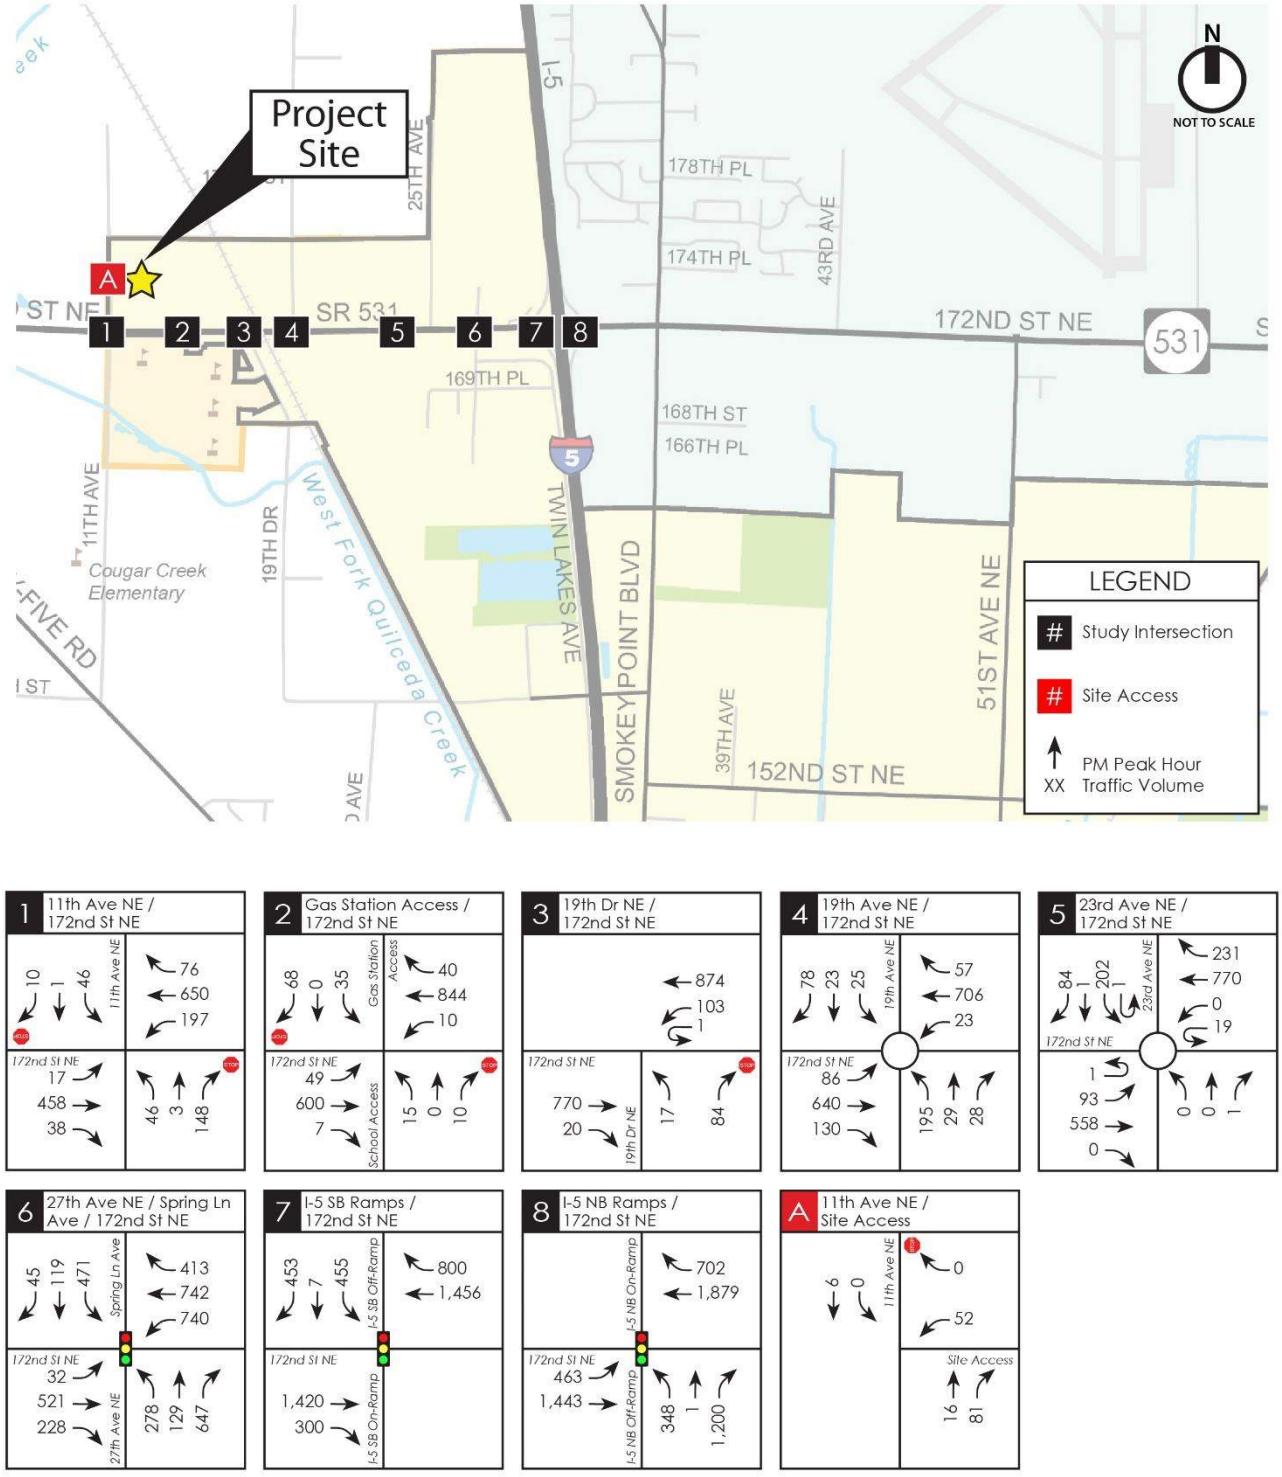

Figure 8: 2036 With Project Weekday PM Peak Hour Traffic Volumes (Horizon Year)

Intersection LOS Analysis

Future intersection LOS analyses during the weekday PM peak hour were evaluated at the eight (8) off-site study intersections for future year 2030 (buildout year) and 2036 (horizon year) conditions with and without the *Gemmer Residential* project. Off-site study intersections were identified based on the City of Marysville's *Traffic Impact Analysis Guidelines (June 2023),* and confirmed through the traffic scoping process. The signal timing data used at the off-site signalized study intersections were based on data provided by the City of Marysville and WSDOT.

The 2030 and 2036 roadway networks assumed in the future LOS analyses were based on existing intersection geometry, plus at least partial completion of the following City planned improvements, as noted below at each location:

- 172nd Street NE / 19th Avenue NE Roundabout – construct new roundabout at the 19th Avenue NE / 172nd Street NE intersection. (Marysville TIP Project #24)

  Note: this improvement is required as a condition of approval for the Lodge Apartments project. Therefore, this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios (when the 156th Street NE Interchange project is complete).

- 172nd Street NE from 27th Avenue NE to 19th Avenue NE – widen to a 4/5-lane section with pedestrian and bicycle facilities between 27th Avenue NE and 19th Avenue NE. (Marysville TIP 30)

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- 172nd Street NW from 11th Avenue NE to 19th Drive NE – widen to a 3-lane section with pedestrian and bicycle facilities between 19th Drive NE and 11th Avenue NE.

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor but does not change roadway geometry at any of the off-site intersections. The Gemmer Residential project is anticipated to complete a portion of this project along it's project frontage.

- New 19th Avenue NE Extension – construct new 3-lane roadway between 156th Street NE and 172nd Street NE that would include pedestrian and bicycle facilities. (Marysville TIP #51)

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios as development(s) are completed along the corridor.

- 156th Street NE Interchange – convert the existing overcrossing to a full single-point urban interchange (SPUI) with Interstate 5. (Marysville TIP #61)

  Note: this improvement is assumed to be completed in the 2036 No Action and 2036 With Project scenarios only.

The intersection LOS results are summarized in Tables 8 and 9 and detailed LOS worksheets are provided in Appendix D.

Table 7
2030 Buildout Year – Weekday PM Peak Hour LOS Summary

	No Action		With Project

5) 23rd Ave NE / 172nd St NE	A	4.7	A	4.7
Signalized Intersections:				
6) 27th Ave NE / 172nd St NE	E	67.3	E	65.8
7) I-5 SB / 172nd St NE	A	8.1	A	8.0
8) I-5 NB / 172nd St NE	C	26.7	C	28.7

The City of Marysville and WSDOT intersection LOS standard is LOS D with one exception. The City of Marysville *Traffic Impact Analysis Guidelines* state that WSDOT intersections on the 172nd Street NE (SR 531) corridor which have an existing LOS E prior to development submittal shall only be required to mitigate upon falling below LOS E. This is the case at the intersection of 127th Ave NE/172nd Street NE. Therefore, as shown in Tables 7 and 8, all off-site study intersections are expected meet the applicable LOS standards during the weekday PM peak hour in year 2030 and 2036 without or with the proposed *Gemmer Residential* project with two (2) exceptions:

- 11th Ave NE / 172nd Street NE (LOS F in 2030 and 2036, without or with project): The City has identified a roundabout at this intersection in their transportation improvement plan (TIP #25). The *Gemmer Residential* project will construct a new single-lane roundabout (or a portion of a new roundabout) at this intersection as mitigation. As a single-lane roundabout, the intersection is anticipated to operate at LOS A in 2036 without or with the proposed project during the PM peak hour. Detailed 2036 No Action and With Project Mitigation LOS worksheets are included in Appendix D.

- 19th Ave NE / 172nd Street NE (LOS E in 2030, with project): The City has identified a roundabout at this intersection (TIP #24). The new roundabout is required as a condition of approval for the Lodge Apartments project. As such, this improvement is assumed to be completed by 2036 (when the 156th Street NE Interchange project is complete) and is expected to operate at LOS A in 2036 as a future roundabout, without or with the project. Therefore, no mitigation is proposed at this intersection with the *Gemmer Residential* project.

It should also be noted that the addition of project traffic to intersections #6 and #7 results in a decrease (improvement) in the overall average intersection delay during the weekday PM peak hour. This occurs because the *Gemmer Residential* project adds trips to non-critical movements (east and west through trips) instead of movements with higher levels of delay, which results in a decrease in the average delay for the entire intersection.

Site Access Evaluation

Primary vehicular access to the site would be provided via 11th Ave NE. Secondary vehicular access would be provided to 172nd Street NE via the existing gas station access located south of the site. To evaluate the operations of the site access intersection on 11th Ave NE, a level of service (LOS) and queue analysis was completed. The weekday PM peak hour LOS and queue analysis at the site access intersection was based on the methodology outlined in the 7th Edition of the *Highway Capacity Manual* using *Synchro 12* software.

Table 10 summarizes the calculated LOS and the 95th percentile queues of the controlled movements at the site access intersection during the weekday PM peak hour in 2030 (buildout year) and 2036 (horizon year) with the proposed project. The reported 95th percentile queues represent a condition that is exceeded only 5 percent of the time. Detailed LOS and queue calculation worksheets are included in Appendix D.

Table 9
PM Peak Hour Site Access LOS and Queuing

	2030 With Project			2036 With Project		
Controlled Movements	LOS [1]	Delay	95th % Queue (ft)[3]	LOS [1]	Delay	95th % Queue (ft)[3]
A. 11th Ave NE / Site Access						
Westbound Approach	A	9.1	<25'	A	9.1	<25'
Southbound Left-Turn	A	0.0	0'	A	0.2	0'

1. LOS = Level of Service
2. Delay refers to average control delay expressed in seconds per vehicle.
3. Queues are 95th Percentile queues. <25' indicates 95th Percentile queue statistically less than 1 vehicle.

Snohomish County Key Intersections

In accordance with the *Snohomish County Traffic Worksheet and Traffic Study Requirements for Developments in the City of Marysville*, project trip impacts at Snohomish County key intersections were identified. Weekday AM and PM peak hour Trip Distribution and Assignment figures and tables were prepared consistent with these guidelines and are included in Appendix G.

MITIGATION

The following measures have been identified to mitigate traffic impacts of the proposed *Gemmer Residential* project.

City of Marysville Traffic Impact Fees. The City of Marysville requires payment of transportation impact fees to help fund planned roadway improvements throughout the City. Transportation impact fees for the proposed *Gemmer Residential* project were calculated based on the trip generation estimate documented in this TIA and the City of Marysville's currently adopted transportation impact fee rate of $6,300 per PM peak hour trip.

The proposed *Gemmer Residential* project is estimated to generate 184 net new PM peak hour trips. As a result, the estimated City of Marysville transportation impact fee is **$1,159,200** ($6,300 X 184 PM peak hour trips). Actual impact fees will be calculated by the City at the time of building permit issuance.

Snohomish County Mitigation. The City of Marysville and Snohomish County have adopted an interlocal agreement whereby developments in Marysville must assess potential mitigation for impacts on Snohomish County roadway facilities. Mitigation fees to Snohomish County are based on predetermined distribution percentages according to location or specific project impacts to planned roadway improvements. A mitigation offer form to Snohomish County will be submitted separately and is included in **Appendix H**.

Future City Road Plans. The *Gemmer Residential* project would build a portion of the following City planned roadway improvements:

- Construct and dedicate right-of-way for the northern half-street of a 3-lane section on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. Construct frontage improvements including new curb, gutter, sidewalk, and street lighting on 172nd Street NE from 11th Ave NE to the eastern site property line, approximately 300 linear feet east of 11th Ave NE. It should be noted that it is anticipated the applicant would receive transportation impact fee credit for frontage and roadway improvements on 172nd Street NE.
- Construct frontage improvements on 11th Ave NE from 172nd Street NE to the northern site property line including new curb, gutter, sidewalk, and street lighting.
- Construct a new roundabout (or a portion of a new roundabout) at 11th Ave NE / 172nd Street NE. Credit toward City transportation impact fees is expected with the anticipated addition of this roundabout to the next adoption of the City's six-year TIP in 2024.

ATTACHMENT D

Level of Service Calculations

Level of Service Methodology

Level of Service (LOS) generally refers to the degree of congestion at an intersection. It is a measure of vehicle operating speed, travel time, travel delays, and driving comfort. A letter scale from A to F generally describes intersection LOS.

Signalized Intersection LOS represents the average control delay (sec/veh) and can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only). The table below outlines the HCM (7th Edition) LOS criteria for signalized intersections.

LOS Criteria for Signalized Intersections [1]

Control Delay (sec/veh)	Level of Service [2]	General Description [3]
≤ 10	A	Exceptionally Favorable Progression (or very short cycle lengths) – Most vehicles arrive during the green indication and travel through the intersection without stopping.
> 10 to ≤ 20	B	Highly Favorable Progression (or short cycle lengths) – While more vehicles than LOS A stop, most vehicles still pass through the intersection without stopping.
> 20 to ≤ 35	C	Favorable Progression (or moderate cycle lengths) – Individual cycle failures begin to appear, but many vehicles still pass through the intersection without stopping.
> 35 to ≤ 55	D	Ineffective Progression (or long cycle lengths) – Many vehicles stop and individual cycle failures are noticeable.
> 55 to ≤ 80	E	Unfavorable Progression (and long cycle lengths) – Individual cycle failures are frequent.
> 80	F	Very Poor Progression (and long cycle lengths) – Most cycles fail to clear the queue at this level.

1 Source: Highway Capacity Manual 7th Edition, Transportation Research Board, 2022.
2 If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0, LOS F is assigned to the individual lane group. For approach-based and intersection-wide assessments at signals, LOS is defined solely by control delay.
3 Individual cycle failures: one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle.

Synchro 12 and/or HCM 2000 LOS methodology may be used when HCM 7th Edition methodology is not supported at an intersection (i.e., intersection geometry and/or custom phasing) or jurisdictional standards require use of an alternative methodology.

Unsignalized Intersection LOS (two-way stop control, all-way stop control, and roundabouts) is based on the average control delay. For two-way stop-controlled intersections, the LOS criteria apply to each controlled minor-street approach, controlled minor-street lane group, and controlled major-street movement (additional v/c ratio criteria apply to lane group LOS only). LOS is not calculated for major-street approaches or for the intersection as a whole at two-way stop-controlled intersections. For all-way stop-controlled intersections and roundabouts, LOS can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only). The table below outlines the HCM (7th Edition) LOS criteria for unsignalized intersections based on these methodologies.

LOS Criteria for Unsignalized Intersections[1]

Control Delay (sec/veh)	Level of Service [2]
≤ 10	A
> 10 to ≤ 15	B
> 15 to ≤ 25	C
> 25 to ≤ 35	D
> 35 to ≤ 50	E
> 50	F

1 Source: Highway Capacity Manual 7th Edition, Transportation Research Board, 2022.
2 If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0, LOS F is assigned to the individual lane group. For approach-based and intersection-wide assessments at unsignalized intersections, LOS is defined solely by control delay.

2036 No Action – Weekday PM Peak Hour

MARYSVILLE
PUBLIC WORKS

FROM: Ryan Keefe, Water Operations Lead II

DATE: December 2nd, 2021

SUBJECT: Fire Flow Test at 1424 172nd St NE

Water Operations has performed a fire flow test as requested for the Gemmer Property. The results were as follows:

Static: 38 psi

Residual: 36 psi

Pitot: 31 psi

GPM: 939

GPM @ 20 psi: 3076

The test was performed using Hose Monster equipment with the GPM taken from their flow chart. The GPM @ 20 psi was determined using the hydrant flow test calculator located on the Hose Monster website. Our north end system has a pump that runs periodically depending on system demand. This may increase system pressure 1-2 psi when running. The plant was not running at the time of this test.

Any questions please contact me at 360-363-8168 or rkeefe@marysvillewa.gov.

Re: PA24-008 – Lakewood Heights Rezone PRD – Technical Review 2

Dear Merle,

After preliminary review of the above referenced proposal, the Planning Division has the following comments:

- Using the realignment of landscape tracts adjacent to 11th Avenue NE, a decorative fence (not standard 6'cedar), decorative masonry wall, or other hardscape fencing shall be required. This is expected to be a condition of approval, and detail shall be provided on the civil construction plans.

Enclosed are copies of comments received from other City departments, and reviewing agencies. I anticipate issuance of a SEPA Determination and Traffic Concurrency Recommendation shortly.

If you have any questions, please do not hesitate to contact me at 360.363.8215, or by e-mail at ahess@marysvillewa.gov.

Sincerely,

Amy Hess

Senior Planner

From: Shane Whitney, Civil Plan Reviewer

RE: Lakewood Heights PRD, File# PA24-008
182 Lot Subdivision
Parcel #'s 31051900400900 & 31051900401100

Date: 8/8/2024

The following comments are offered after review of the above referenced revised application. Some of the previous comments will remain, as they won't change throughout the life of the project. New comments and comments that still need to be addressed will be in a ***bold italic*** font.

1. **Existing utilities**:
    a. Sanitary sewer: Sanitary sewer has yet to be extended to the property, but it is getting close to 172nd Street.
    b. Water: There currently is a 12" cast iron water main running along 172nd ST NE and can be found on record drawing W775.
    c. Storm: Storm currently runs along 172nd ST NE and can be found on record drawing RD282.

2. Per MMC 14.03.250, utilities are to be extended along the street frontages of the proposed project.
    a. Sewer will need to be extended along the projects frontage and within the new City roads. Sewer will also need to be made available to the homes at 1205, 1215 and 1227 172nd Street. ***As an additional note, the project will need to connect the force main within 172nd to this projects extension at 16th Drive.***
    b. Water main installation will be required within the plat.
    c. Storm drainage will need to be provided for the widened sections of existing City roads as well as the new plat roads.

3. **Frontage Improvements:** Frontage improvements are required per MMC 12.02A.090 on all projects. Frontage improvements are described as curbs, gutters, and sidewalks; underground storm drainage facilities; patching the street from its preexisting edge to the new curb line; and overlayment of the existing public street to its centerline.

a. The Traffic Engineer shall provide the guidance of what will need to be constructed along 172nd Street.
b. 11th Ave NE is considered a local access street, half street improvements shall be compliant with SP 3-202-002 of the EDDS. If the depth of existing roadway section is lacking the City standard for depth of materials, full depth replacement of asphalt will be required. At a minimum, a 2 inch grind and overlay to the center of the right-of-way will be necessary.

4. **Dedication Requirements:**
   a. The supplied documents appear to show adequate dedication, should it become apparent that additional area is needed, the project shall dedicate what area is necessary.

5. **Access**:
   a. The new roads to be constructed shall be compliant with SP 3-218-001 of the EDDS.
   b. The minimum width of a residential driveway is 12-feet and the maximum is 26-feet. Curb cuts shall be limited to a 20 foot maximum.
   c. Tract 969 will require an easement off the end of the autocourt.
   d. The internal roadways are being shown as cross sloped, please revise to a crowned section.

6. **Drainage:** All projects in the city of Marysville must comply with requirements stipulated under the MMC 14.15.040 and 14.15.050.
   a. Stormwater drainage: The city has adopted the 201 Ecology Manual. The project must be compliant with minimum requirements 1 – 9. The following considerations will be necessary in subsequent reports:
      - ***There are 2 areas of the homes that are being shown as bypass, while this is only for preliminary approval the report does need to document how those areas meet the criteria to be bypassed.***
      - At time of civil plan submittal, a conveyance analysis will be necessary.
   b. A geotechnical report has been submitted.
   c. The maximum allowed impervious surface coverage for a PRD is 70%.

Other Comments:

7. Trench restoration is to be completed in accordance with section 3-703 of the EDDS. A full lane or full street overlay may be required.

8. The onsite grading and placement of any retaining walls must be compliant with section 22D.050.030 of the MMC.

9. A right of way use permit for all work proposed within City right of way is required. Cost for the ROW permit is $648.00, fees to be paid prior to issuance.

10. The applicant is responsible for identifying any existing well or septic systems on site or on adjacent properties. If there are any existing septic systems on site they need to be decommissioned based on the Snohomish Health District standards. If there are any wells on site they need to be decommissioned based on Department of Ecology standards.

11. Engineering construction plan review fees will be due prior to release of approved civil construction plans.
    Engineering construction plan review per MMC 22G.030.020:
    $976 plus a $2000 deposit are due for submittal of the grading permit.
    Review fee of $130 per hour will be charged against the deposit.

12. Engineering construction inspection fees will be due prior to project final or building final whichever comes first.
    Engineering construction inspection fees per MMC 22G.030.020:
    Inspection is charged at $130 per hour with a $2500 deposit required.

13. **All civil construction plan submittals are to be completed through our online permit portal at the following link: https://permits.marysvillewa.gov/PermitApplication/confirmation.aspx Once the submittal is complete, please email the permit tech's at msvlpermits@marysvillewa.gov.** The first *civil construction* plan submittal is to consist of a completed grading permit application, a plan set, a copy of the drainage report and a copy of the geotechnical report.
    a. Review timing:
        i. First review = 5 weeks
        ii. Second review = 3 weeks
        iii. Third review = 3 weeks
        iv. Subsequent reviews will be 3 weeks.

14. Please be advised these comments are in reference to specific items and do not imply a full review of the proposed application. Additional comments which may change the design requirements will be provided during the civil construction plan review process.

If you have additional questions regarding the above comments, please contact me at swhitney@marysvillewa.gov or at (360) 363-8227.

cc: Ken McIntyre, PE, Development Services Manager

MARYSVILLE FIRE DISTRICT
REGIONAL FIRE AUTHORITY
Fire Marshal's Office
1635 Grove St. Marysville, WA 98270 - (360) 363-8500
MFInspectors@MFDRFA.org - www.marysvillefiredistrict.org

To: Amy Hess, Senior Planner
From: Brian Merkley, Deputy Fire Marshal
Date: July 25, 2024
Subject: PA24-008 ~ Lakewood Heights PRD ~ 1125 & 1507 172nd Street NE

I have completed a review of the resubmitted plans for this project proposing development of a 182 SFR residential development on 29.48 acres. Please see below for comments and requirements.

1. **GENERAL INFORMATION:**
   a. The project shall comply with current fire code requirements (2021 IFC) including WA State and local City of Marysville amendments to the fire code, city design standards, and all applicable NFPA standards, including IFC Chapter 33 and NFPA 241 construction codes.
   b. Fire marshal approval of fire access and fire hydrant/water supply systems is required as part of the civil construction plan review and approval process.

2. **WATER RELATED:**
   a. The following lots will require fire sprinklers due to distance from ROW: 12-13, 36-39, 69-70, 88-89, 104, 166-167, 174-175, 179-180. *The lot numbers have changed from previous plans. Please state fire sprinkler requirements for these lots on civil plans.*
   b. It is the developer's responsibility to see that adequate water for fire protection is attainable. The minimum required fire flow is determined using IFC Appendix B, and depends upon building sizes, construction types, and sprinkler systems. Proof of fire flow will be required. *Fire flow report provided and acceptable.*
   c. Provide water main extensions with hydrants along the new roadways and at all road intersections in approved locations, with maximum spacing of 600' apart. *Hydrants appear to be in acceptable locations.*
   d. Fire hydrants shall comply with city Water Design Standard 2-060 Hydrants, including 5" Storz fittings, with blue reflective hydrant markers to be provided in the roadways, located four inches off the centerline on the hydrant side of the road.
   e. Fire hydrants with approved water supply must be in service prior to building construction.
   f. Future homes to be constructed may require residential sprinkler installation for a number of reasons, including: if homes are three or more stories tall, if fire flow from hydrants does not meet fire code requirements, if any part of homes is further than 200' from the public road ROW with no hydrant provided on-site, or to mitigate access deficiencies.
   g. Where residential fire sprinklers may be required the developer should install a water service per Standard Plan 2-090-001 Full ¾" x 1" Meter Service. Under this plan a 1"

tap is made at the water main and 1" piping is run to the 1" meter setter. If in the end a ¾" water meter will suffice then all that is required is to install two reducer bushings with the ¾" water meter. A single service tap should be used where sprinklers are required, not a double service installation.

3. **ACCESS RELATED**:
   a. Turnaround provision is required for dead-end access in excess of 150 feet long. Turnarounds shall comply with city standard plans. (MMC 9.04.503.2.5). *Access shown on plans appears acceptable.*
   b. "Where the vertical distance between the grade plane and the highest roof surface exceeds 30 feet (9144 mm), approved aerial fire apparatus access roads shall be provided. For purposes of this section, the highest roof surface shall be determined by measurement to the eave of a pitched roof, the intersection of the roof to the exterior wall, or the top of parapet walls, whichever is greater." (2021 IFC D.105.1). *Building heights are to be less than 30 feet, 2 story structures per applicant.*
   c. An adequate access route for fire apparatus must be in service prior to any building construction.
   d. Access for firefighting operations along all sides of all buildings is required. A minimum 5' wide access is required for MF dwellings. All parts of building exteriors should be accessible for firefighting by an approved route around the building, and be within 150 feet of a minimum 20' wide fire apparatus access.
   e. "**NO PARKING - FIRE LANE**" signs are required on both sides of all roads that are 26 feet wide or less. The signage shall be identified on the approved Civil Plans. (MMC 9.04.101, 2021 IFC Appendix D103.6.1) *This requirement only pertains to no parking signs. Standard fire lane width is 20' unless aerial access is required.*
   f. The city address committee will determine road names and address numbers for the lots.

MEMORANDUM

TO: Amy Hess – Senior Planner

FROM: Jesse L. Hannahs, P.E. – Traffic Engineering Manager

DATE: August 14, 2024

SUBJECT: PA 24-008 – Lakewood Heights

I have reviewed the Lakewood Heights site plan for the proposed development at 1125 & 1507 172nd ST NE and have the following comments:

1) Traffic impact fees will be required from the City and depending on trip generation/distribution, may be required from the County and State.
2) A Traffic Impact Analysis (TIA) will be required.
    a. TIA is acceptable.
        i. Mitigation shall require construction of:
        ii. 172nd ST NE (SR 531) & 11th Ave NE Roundabout
        iii. 172nd ST NE (SR 531) & 19th Ave NE Roundabout
        iv.
3) Per EDDS 3-506, street lighting will be required upon all public street frontages as part of civil construction plans.
    a. Street lighting on 172nd ST NE shall be required as decorative style street light assemblies with LED fixtures to match existing fixtures on each street.
        i. 172th ST NE shall be designed as Principal Arterial/Commercial.
        ii. Fixtures would be Lumec Renaissance Series per to be provided City Specification.
            1. Specification should be requested via emailed to jhannahs@marysvillewa.gov
            2. PUD street lighting shall not be installed in Lakewood area upon arterial or connector roadways.
        iii. Lighting design shall incorporate fixture wattage to match those already installed upon each respective roadway.
        iv. Photometric layouts shall be required for design with photometrics consisting of staggered lighting on both sides of each roadway and development to install only street lighting on frontage side of each roadway.
    b. Street Lighting upon residential streets of 11th Ave NE and all internal roadways shall be PUD installed fiberglass pole installation type street lighting.
        i. Street shall be designed as collector arterial utilizing 100 watt equivalent LED fixtures.
        ii. Spacing of fixtures should be approximately 180'-220'.

MARYSVILLE
PUBLIC WORKS

(360) 363-8100

Public Works
80 Columbia Avenue
Marysville, WA 98270

iii. As part of civil construction approval proposed PUD street lighting locations shall be provided by the City for inclusion within the PUD site electrical plans for City review.
iv. Contact Eddie Haugen of Snohomish County PUD at (425) 783-8276 or wehaugen@snopud.com for more information regarding PUD street lighting.

4) Driveway placement:
   a. To the extent feasible, driveways shall be staggered, not opposing each other.
      i. Opposing driveways result in parking occurring at the same location on both side of the street with challenges then being placed upon emergency vehicles and sanitation and thus citizen unhappiness with requests for parking to be restricted to one side only which is not desirable for citizens or maintenance purposes.
      ii. Aligned driveways that shall be reconfigured include:
         1. Lots 7-8 & 42-43
         2. Lots 1-6 & 46-51
         3. Lots 73-76 & 77-80
5) Channelization and Signing Plan shall be required as part of civil construction plans for all public roadways.
   a. Stop sign and stop bar shall be signed upon all approaches to an arterial such as 172nd ST NE.
   b. Street name signs shall be installed at all intersections or locations where street names change such as 90 degree turns.
   c. 25 mph speed limit signs shall be installed at all entry points from an arterial or a roadway with a different speed limit.
   d. Parking restrictions shall be placed on the outside of all 90 degree turns, 10-15' to either side, as sanitation has challenges with garbage pickup when parking occurs near curve bulb outs.

Arlington, WA 98223

Re: **Lakewood Heights – PA24-008 –** ***Concurrency Recommendation***

Dear Mr. Ash,

MJS Investors, is proposing the development of up to 185 single family detached units upon 45.46 acres located along 11th Ave NE north of 172nd ST NE (SR 531) on parcels with APN(s): 31051900400900 and 315051900401100. Two (2) existing single family homes are located on site with one (1) to be removed and one (1) to be retained with development.

Based on the Traffic Impact Analysis (TIA) prepared by Transportation Engineering Northwest (TENW), dated November 15, 2023, and TIA Memorandum dated May 22, 2024, the proposed development would generate the following Average Daily Trips (ADT), AM peak hour trips (AMPHT), and PM peak hour trips (PMPHT):

USE	Units	ADT	AMPHT	PMPHT
Land Use Code 210 – Single Family Detached Housing	185	1,762	129	185
Land Use Code 210 – Single Family Detached Housing - Retained	1	0	0	0
Land Use Code 210 – Single Family Detached Housing - Removed	-1	-9.43	-0.70	-1.0
Total Trips	185	1,752.57	128.3	184

Based on our review of existing conditions, as well as other applicable supplemental information submitted with the application, and on file with the City, the following impacts and mitigation obligations are required for the Lakewood Heights Subdivision:

1. The applicant shall be required to construct frontage improvements along 11th Avenue NE prior to recording the final subdivision. Roadway improvements, channelization, site access and lighting plans designed per City, State and/or Federal Guidelines/Standards shall be required to be reviewed and approved by the City Engineer, prior to construction plan approval.

   1.1. 11th Avenue NE shall be built as a Local Access Street compliant with EDDS SP 3-202-002.

2. The applicant shall be required to construct frontage improvements along 172nd ST NE (State Route 531) prior to recording the final subdivision. Roadway improvements, channelization, site access and lighting plans

designed per City, State and/or Federal Guidelines/Standards shall be required to be reviewed and approved by the City Engineer, prior to construction plan approval.

2.1. 172nd ST NE (State Route 531) shall be built as a Two-Lane Principal Arterial Roadway with multi-use paths on both sides compliant with EDDS SP 3-201-008.

3. The applicant shall be required to construct the single-lane roundabout at the intersection of 172nd ST NE (State Route 531) and 11th Ave NE prior to recording the final subdivision. Roadway improvements, channelization, site access and lighting plans designed per City, State and/or Federal Guidelines/Standards shall be required to be reviewed and approved by the City Engineer, prior to construction plan approval.

3.1. Roundabout construction shall include the full circulating vehicular roadway from curb to curb including all median splitter and central islands. Full roundabout improvements, consisting of landscaping and/or sidewalk(s) and multi-use path(s) on the 172nd ST NE(SR 531) and 11th Ave NE development frontage consisting of the Northeast Quadrant of the intersection and reconstruction of existing full roadway improvements where modification for roundabout construction is required consisting of the existing improved Southeast Quadrant and/or any improvements constructed by others prior to this subject development, shall be required for construction.

3.2. Street lighting for the full future roundabout shall be required in order to provide necessary multi-modal traffic safety for all roadway users. Street lighting locations to the extent feasible, as determined by City Engineer, shall be required to be installed to coincide with full ultimate roundabout design locations.

4. The roundabout (RAB) at 172nd St NE and 19th Ave NE is subject to other projects' respective concurrency requirements. The applicant will be responsible for its proportionate share of the cost of designing and constructing the RAB based on its pro rata share of its generated trips through the RAB. Roadway improvements, channelization, site access and lighting plans designed per City, State and/or Federal Guidelines/Standards shall be required to be reviewed and approved by the City Engineer, prior to construction plan approval.

4.1. Roundabout construction shall include the full circulating vehicular roadway from curb to curb including all median splitter and central islands. Full roundabout improvements, consisting of landscaping and/or sidewalk(s) and multi-use path(s) where modification for roundabout construction is required consisting of the existing improved Southeast Quadrant and/or any improvements installed prior to this subject development, shall be required for construction.

4.2. Street lighting for the full future roundabout shall be required in order to provide necessary multi-modal traffic safety for all roadway users. Street lighting locations to the extent feasible, as determined by City Engineer, shall be required to be installed to coincide with full ultimate roundabout design locations.

5. The applicant shall be required to construct internal development proposed public roadways prior to recording the final subdivision. Roadway improvements, channelization, site access and lighting plans designed per City, State and/or Federal Guidelines/Standards shall be required to be reviewed and approved by the City Engineer, prior to construction plan approval.

5.1. All internal development public roadways shall be built as a Local Access Street compliant with EDDS SP 3-202-002.

5.2. Existing private street, to the west of existing gas station upon parcel with APN(s): 31051900401000, shall be required to be reconstructed as a Local Access Street compliant with EDDS SP 3-202-002.

6. The applicant shall be required to dedicate public right-of-way in order to accommodate the required frontage improvements, in accordance with MMC 12.02A.110(1)(c), *Dedication of Road right-of-way – Required setbacks*. Right-of-way widths and required dedication shall be determined by the City Engineer.

7. In order to mitigate traffic impacts upon the future capacity of the road system, the applicant shall be required to submit payment to the City of Marysville, on a proportionate share cost of the future capacity improvements as set forth in MMC 22D.030.070(3), for the development. **Traffic impact fees shall be per**

PMPHT, with up to 18 new PMPHTs total for the development vested at a rate of $6,300 per single family detach housing unit.

Marysville Municipal Code (MMC) 22D.030.070(1)(d), requires an applicant to make a written proposal for mitigation of a development's traffic impacts to the Public Works Director, prior to finalizing a concurrency determination and conditions of approval. If you have any questions, regarding the developments impacts and recommended mitigation obligations outlined above, please contact Amy Hess, Senior Planner, at ahess@marysvillewa.gov or by phone at 360.363.8215 or Jesse Hannahs, P.E., Traffic Engineering Manager, at jhannahs@marysvillewa.gov or via phone at 360-363-8287.

Sincerely,

Jesse L. Hannahs, P.E.
Traffic Engineering Manager

Amy,
The traffic concurrency recommendation is acceptable to us. However can you please confirm two items for us:

1. That items #1-3 can be bonded for?
2. Last sentence in item #4, "…prior to construction plan approval". Please confirm this is referring to the approval of the RAB plans at 19th. Not the construction plans for our site?

Thanks!

Rob,
Yes, any remaining traffic impact fee credits that are not utilized may be applied to the determined proportionate share for Lakewood Heights, consistent with the City's TIP.

Thanks Amy!
I'll provide a written acceptance here shortly.

Jennifer and I discussed that - if we have any remaining impact fee credits, they can be applied to our proportionate share of the cost to construct the RAB at 19th? Can you please confirm this for me? Adding Jennifer to this email.

ENVIRONMENTAL IMPACTS

The proposed construction and subsequent use of the property could result in the following adverse environmental impacts.	
1.	Increase in the amount and rate of stormwater runoff and attendant pollutants from the introduction of paved and building roof surfaces.
2.	Increase in erosion, surface water pollutants, siltation and sedimentation as a result of site preparation and construction.
3.	Increase in demand for police, fire protection, parks and other public services generated as a result of the development.
4.	Increase in noise, dust, light and glare from construction activity and subsequent use of the site.
5.	Increase in vehicular traffic on 172nd Street NE, 11th Avenue NE, as well as other City streets in the vicinity.
6.	Change in character of the site from large lot single family sites into a suburban medium-density single family development.
MITIGATION MEASURES	
The following mitigation measures are required to minimize the probable significant adverse environmental impacts as a result of the proposed development activity.	
1.	The applicant and contractor shall strictly adhere to the recommendations outlined in the *Preliminary Geotechnical Engineering Study* prepared by Cobalt Geosciences dated February 9, 2022 and future supplemental reports and amendments, during construction of the project. Prior to final building inspections being granted, the applicant shall provide a letter from the project engineer to verify that final site grading has been completed consistent with the approved grading plans; that all recommendations outlined in the geotechnical assessment and subsequent amendments have been followed; and that all fill has been properly placed.
2.	Prior to civil construction plan approval, the applicant shall demonstrate that the natural topography of the site is preserved to the extent feasible, and that the proposal complies with the design criteria set forth in MMC Section 22D.050.030(4). Any retaining wall will be required to have a nice aesthetic and have the appearance of stone or rock (no ecology block walls); details must be provided on the civil construction plans.
3.	Pursuant to MMC Section 22G.120.270(2), all projects shall have all power lines, telephone wires, television cables, fire alarm systems and other communication wires, cables or lines (including existing overhead lines along the project's 172nd Street NE frontage and 11th Avenue NE frontage shall be placed underground either by direct burial or by means of conduit or ducts to provide a clean look to the streetscape.
4.	The Department of Archaeology and Historic Preservation's (DAHP) Inadvertent Discovery Plan shall be followed during site construction. If at any time during construction archaeological resources are observed on the project site, work shall be temporarily suspended at the location of discovery and a professional archaeologist shall document and assess the discovery. The DAHP and all concerned tribes shall be contacted for any issues involving Native American sites. If project activities expose human remains, either in the form of burials or isolated bones or teeth, or other mortuary items, work in that area shall be stopped immediately. Local law enforcement, DAHP, and affected tribes shall be immediately contacted. No additional excavation may be undertaken until a process has been agreed upon by these parties, and no exposed human remains should be left unattended.
5.	Any existing on-site septic systems shall be abandoned by having the septic tanks pumped by a certified pumper, then having the tops of the tank removed or destroyed and filling the void per WAC 246-272A-0300. Documentation demonstrating completion of work shall be submitted with the building permit submittal.
6.	Any existing on-site wells shall be decommissioned in accordance with WAC 173-160-381. A copy of the well contractor's decommissioning report(s) shall be submitted with building permit submittal.
7.	Project shall comply with the traffic concurrency recommendation dated November 18, 2024, signed by Jesse Hannahs, Traffic Engineering Manager (Exhibit 030).

8.	The joint use autocourts (Tracts 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, and 978) shall be constructed with scored concrete, paving blocks, bricks, or other ornamental pavers to clearly indicate that the entire surface is intended for pedestrians as well as vehicles, as outlined in the City of Marysville Design Guidelines and Engineering Design and Development Standard (EDDS) Section 3-219. A detail of the surfacing of the autocourt will be required to be provided on the civil construction plans and approved by the City Engineer.
9.	The onsite wetland and buffer areas that will be retained shall be placed in a separate Native Growth Protection Area (NGPA) tract. The boundary of the tract shall be delineated by the installation of split rail fencing and signage.
10.	Prior to any ground disturbing activities, all wetland buffer areas shall be temporarily fenced between the construction activity and the buffer area with highly visible and durable protective barrier(s). Said barriers shall be retained during construction to prevent access and sedimentation from disturbed areas from entering the wetland or its buffer.
11.	Pursuant to MMC 22E.010, a FINAL Critical Areas Enhancement, Monitoring and Maintenance Plan, designed in accordance with MMC 22E.010.160, shall be required to be approved, prior to civil construction plan approval. The plan shall include a detailed planting plan of what will be planted, and where and when planting will occur.
13.	Prior to final plat approval, all mitigation measures as proposed in the approved Critical Area Study and Buffer Mitigation Plan, prepared by Seawall Wetland Consulting, Inc., dated January 30, 2024, or as amended, shall be implemented with final approval by Community Development. Security for performance and/or maintenance of the required mitigation and monitoring shall be in strict compliance with MMC 22E.010.160.

APPEALS

☒ This MDNS may be appealed pursuant to the requirements of MMC 22E.030.180. There is a 15-day appeal period on the MDNS that commences from the date the MDNS was issued. Any appeal must be addressed to the responsible official, accompanied by a filing fee of $500.00, and be filed in writing at the City of Marysville Community Development Department, 501 Delta Avenue, Marysville, WA 98270. The appeal must be received by 4 p.m., **December 17, 2024**. The appeal must contain the items set forth in MMC 22G.010.550.

☐ There is no agency appeal.

SEPA ENVIRONMENTAL CHECKLIST
APPLICATION REVIEW

Purpose of checklist:
Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

***Instructions for applicants*:**
This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. **You may use "not applicable" or "does not apply" only when you can explain why it does not apply and not when the answer is unknown.** You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to **all parts of your proposal**, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Instructions for Lead Agencies:
Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

Use of checklist for nonproject proposals:
For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B plus the SUPPLEMENTAL SHEET FOR NONPROJECT ACTIONS (part D). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in Part B - Environmental Elements –that do not contribute meaningfully to the analysis of the proposal.

Application Format
The application will only be accepted if the original form is used (with typewritten answers in the spaces provided) or the application is reproduced in identical form.

NOTE: The checklist questions apply to all parts of your proposal, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. You may be asked to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Required Attachments
Submit the original checklist form and six (6) copies (for a total of seven (7)) along with seven (7) copies of each of the following:

1. Vicinity map clearly showing the location of the project with respect to public streets and other parcels and development
2. Site plan*
3. Conceptual building elevations
4. Preliminary Civil Plans
5. Wetland Delineation, if applicable
6. Geotechnical Reports, if applicable
7. Critical Areas Report (fish and wildlife habitat), if applicable

**The site plan must show north arrow and engineering scale; any significant or natural features such as creeks, wetlands, steep slopes; dimensions and shape of the lot; location and size of existing and proposed buildings and development, including parking and landscape areas, adjacent streets and point of ingress and egress, and adjacent uses.*

Correspondence
Note that all correspondence regarding the environmental review of your project will be sent to the person listed as **Applicant.**

Fees
There is a nonrefundable application fee for all environmental checklists. Submit the fee with the application(s) and make checks payable to the City of Marysville. The required fees for SEPA Review may be found here:
https://www.codepublishing.com/WA/Marysville/#!/Marysville22G/Marysville22G030.html#22G.030.020

Pre-application Conference
Most projects that are not categorically exempt from SEPA will require a pre-application conference; in some cases, at the discretion of the Community Development Director, the pre-application conference may be waived. The pre-application conference must be conducted prior to the submittal of the environmental checklist.

SEPA Exempt Determinations

Projects that meet the thresholds for categorical exemptions of Chapter 22E.030 MMC are exempt from filing an environmental checklist. All other project and non-project actions require a completed environmental checklist and a project permit application to be submitted. If an applicant feels that their proposal should be considered to be SEPA-exempt, the applicant can submit a letter requesting a SEPA exempt determination with the environmental checklist and fee. The Community Development Director will review the request and if the application is determined to be SEPA exempt, a letter will be issued confirming the SEPA exempt status.

Project Phasing
The Checklist questions apply to all parts of your proposal, even if you plan to phase the project over a period of time or on different parcels of land. You must include any additional information that helps describe your proposal or its environmental effects. You may be asked to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact(s).

SEPA Appeals
Any agency or person may appeal a Determination of Non Significance (DNS) or Determination of Significance (DS) by completing and submitting an appeal form to the Hearing Examiner within fourteen (14) calendar days of the date the determination is final. Such appeals must be filed with the City Clerk. Appeals of environmental determinations under SEPA, including administrative appeals of a threshold determination, shall be heard by the Hearing Examiner and shall proceed pursuant to Chapter 22G.010 Article VIII *Appeals*. There is a nonrefundable $500 Administrative

Appeal fee to be submitted with appeal.

A. BACKGROUND

1. Name of proposed project, if applicable:

   Lakewood Heights PRD

2. Name of applicant: http://sepaguidance.epermitting.wa.gov/DesktopModules/help.aspx?project=0&node=554

   MJS Investors

3. Address and phone number of applicant and contact person:

   Applicant: 11201 SE 8th St. Ste 116
   Bellevue, WA 98004
   425.559.2726

Contact: Land Technologies, Inc.
18820 3rd Ave NE
Arlington, WA 98223
360.652.9727

4. Date checklist prepared:

   January 22, 2024

5. Agency requesting checklist:

   City of Marysville

6. Proposed timing or schedule (including phasing, if applicable):

   Work to commence as soon as permits can be approved; expect summer 2024

7. Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.

   No, this 182 lot PRD is the final plan for the site. Adjacent properties will be developed by other developers and not as an "expansion" of this project.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

   1. ***SEPA***
   2. ***Critical Area Report***
   3. ***Traffic Report***
   4. ***Geotechnical Report***
   5. ***Stormwater Management Report***
   6. ***Stormwater Pollution Prevention Plan***

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

An Administrative Rezone is required. This is trading areas to remove split zoning.

10. List any government approvals or permits that will be needed for your proposal, if known.

From the City of Marysville:

1. ***Land Disturbing Activity Permit***
2. ***SEPA Determination***
3. ***PRD Binding Site Plan Approval***
4. ***Construction Stormwater General Permit from DOE***
5. ***Forest Practice Permit from DNR***

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)

"Lakewood Heights PRD" is a 29.48 Acre Site in the City of Marysville. It is zoned R-6.5 Single-Family High. The proposal is for a 182 lot Planned Residential Development.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

SE ¼ Section 19, Township 31N, Range 5E

Address is 1125 & 1507 172nd St NE, Marysville WA 98271

B. ENVIRONMENTAL ELEMENTS

1. Earth

a. General description of the site
(*bold/italicize*): ***Flat***, rolling, hilly, steep slopes, mountainous, other _____

b. What is the steepest slope on the site (approximate percent slope)?

The site is mostly "level" with slopes averaging in the range of 0 to 5 percent for the majority of the developable area. The site has an average slope of 3.89%.

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.

Per NRCS mapping, the majority of the site is mapped as moderately well-drained Alderwood gravelly sandy loan. The eastern side of the site is mapped as Kitsap silt loam. Neither of these soils are considered hydric or wetland soils.

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

No

e. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.

Site grading for development of lots, roads and homesites covers about 27 acres. There is a clearing of a mixture of pastures/hay crops and wooded areas. Grading estimates will include about 50,000 cys of total earth work. A good portion of that is stripping of organic soils and replacement with compost amended soils in the landscape areas of the site. That also includes that replacement of gravels and paving for road areas. Structural cuts and fills will come very close to balancing.

f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.

Heavy rains on exposed subgrade materials could erode surface soils picking up silt into runoff water.

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

Total Impervious Surfaces with roofs, driveways and roads is less than 60% and will be kept under the 70% Maximum allowed.

h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:

Best Management Practices (BMPs) per the Current Stormwater Management Manual are proposed. The primary concern will to be to contain any silt laden runoff from leaving the fill site. Vegetative Strips, Wattles, Plastic Covering, and Sediment Traps are a few of the options but not all inclusive.

2. **Air**

a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

Dust can be raised during dry weather earth work and exhaust from construction equipment. During operation, exhaust from onsite equipment and vehicles coming to the site. Possibility of some dust being raised moving materials around during dry weather could happen

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

No

c. Proposed measures to reduce or control emissions or other impacts to air, if any:

If there is persistent dry weather during construction, watering for dust control will be first measure of control. Combinations of keeping access ways clean of silts and dirt may be combined with watering in extreme conditions.
Construction equipment and onsite operating equipment will have all exhaust control devices in proper working order. Licensed trucks and autos emissions are controlled by licensing laws.

3. Water

a. Surface Water:

1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

There is a small wetland in a wooded portion of the NW corner of the site. There is another offsite wetland in the NE corner where a buffer extends onto this property. Any runoff from the site is picked up by Road Ditches or old Farm Ditches off this project near the RR. These ditches direct flow to the south and it eventually may get to the West Fork Quilceda Creek which is a ¼ mile south of the SW corner of the property and ½ mile south of the SE corner of the property.

2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.

There will be work within 200' of the wetlands but no work in the wetlands. There may be some buffer mitigation.

3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

None

4) Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities if known.

No

5) Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.

No

6) Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.

No discharge of waste to surface waters

b. Ground Water:

1) Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give general description, purpose, and approximate quantities if known.

No groundwater withdrawals.

2) Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: Domestic sewage; industrial, containing the following chemicals. . .; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

No waste is to be discharged to the ground.

c. Water runoff (including stormwater):

1) Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.

Runoff will be from roads, driveways, and rooftops. The runoff is being collected in biocells for treatment and will be flow-controlled in rock chamber under the treatment cell. The runoff will infiltrate through a biofilter that will

providing enhanced treatment before passing into a rock chamber for flow control.

Roof runoff will be conveyed directly into flow-control facilities after treatment and filtering through a small yard basin structure and/or a downspout filter.

In the rock chambers, flows will be metered to the MS4 stormwater conveyance. This MS4 does discharge a quarter to half mile offsite into Quilceda Creek.

2) Could waste materials enter ground or surface waters? If so, generally describe.

Not likely. All runoff is filtered before being released to rock chambers for flow control. The biofiltration through the biocells are considered enhanced treatment.

3) Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.

Drainage patterns in the vicinity will not be measurably impacted. Runoff from the graded site will be similar to the existing drainage patterns—Threshold Discharge Areas (TDAs) will be maintained.

d. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any:

Providing Erosion Control BMPs and treatment BMPs as needed. Set up site to collect and treat runoff before metering discharge to pre-development release rates.

4. Plants

a. ***Bold/Italicize*** the types of vegetation found on the site:

deciduous tree: ***alder, maple, aspen***, other
evergreen tree: ***fir,*** **cedar**, pine, other
shrubs
Grass, pasture
crop or grain **Hay and some winter wheat**
Orchards, vineyards or other permanent crops.
wet soil plants: cattail, ***buttercup***, bullrush, skunk cabbage, other
water plants: water lily, eelgrass, milfoil, other
other types of vegetation:

b. What kind and amount of vegetation will be removed or altered? http://sepaguidance.epermitting.org/DesktopModules/help.aspx?project=0&node=619

The 29.48 is acres has a mix of pasture or hay-crop fields and wooded areas. About 27 acres of this will be cleared.

c. List threatened and endangered species known to be on or near the site.

None known

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

Provide landscape buffers and screening per City of Marysville Code

e. List all noxious weeds and invasive species known to be on or near the site.

None

5. Animals

a. ***Bold/Italicize*** any birds and <u>other</u> animals which have been observed on or near the site or are known to be on or near the site. Examples include:

birds: ***hawk***, heron, eagle, ***songbirds***, other:

mammals: ***deer***, bear, elk, beaver, other:

fish: bass, salmon, trout, herring, shellfish, other _____

b. List any threatened and endangered species known to be on or near the site.

None

c. Is the site part of a migration route? If so, explain.

The Puget Sound area is all part of the Pacific Flyway. This site is not otherwise a specific migration route.

d. Proposed measures to preserve or enhance wildlife, if any:

None needed as site has been mostly farmed.

e. List any invasive animal species known to be on or near the site.

None known

6. Energy and natural resources

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

Electricity will be the primary energy source. There may be some wood stoves or solar provided by individuals later.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

No

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any:

None

7. Environmental health

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste that could occur as a result of this proposal? If so, describe.

Gasoline, motor oils, hydraulic fluid, brake fluid, and battery acids are used in vehicles accessing or working at the site. However, none will be stored at the site; placing equipment will be refueled from mobile trucks.

Once Construction is completed, just hazards associated with a residential community could occur.

1) Describe any known or possible contamination at the site from present or past uses.

There are none.

2) Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.

None

3) Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.

Gasoline, Diesel, Hydraulic Fluid, brake fluids are used in the equipment working the site. None will be stored onsite.

4) Describe special emergency services that might be required.

The likeliest emergency service would be for someone hurt in the operation of the sitework. This could be physical injury from heavy equipment operations requiring ambulance service to the hospital.

5) Proposed measures to reduce or control environmental health hazards, if any:

Think Safety and Operate per OSHA Guidelines

b. Noise

1) What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?

There are the railroad tracks to the east of the site but the train noise will not be detrimental to the use of the site.

2) What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site.

During permitted hours of work, noise will be created by grading and excavation equipment during development, and saws and hammers from carpenters when building homes. This additional noise will be temporary in nature.

There will be increased background noise from a future residential community by the increase in density. This is a by-product of GMA on a site designated for the increase in density by GMA.

3) Proposed measures to reduce or control noise impacts, if any:

Work will be performed during allowed hours of operation and equipment will have noise suppression equipment in good working order.

8. Land and shoreline use

a. What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.

The land is in the Area known as the Lakewood Neighborhood of the City of Marysville. The area is rapidly developing with retail, commercial, and high-density residential projects.

To the south is a mix of uses. There are some single family homes and some commercial uses including a small store and gas station. There is some office space with a couple of tenants. The adjacent land is zoned Mixed Use. Across

172nd is the Lakewood School Complex with the high school located directly south of the site.

To the west and across 11th Ave NE are rural residential uses outside the City. The same rural uses are to the north also. A new rural plat is in process on the adjacent property to the north.

To the east is vacant land zoned for Mixed Use and east of that land is Burlington Northern Railroad lines.

Any change has the perception of "impacts" by existing properties but adjacent property uses will not be affected; any existing uses and planned uses per current rules and regulations will not be impacted.

b. Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses as a result of the proposal, if any? If resource lands have not been designated, how many acres in farmland or forest land tax status will be converted to nonfarm or non-forest use?

Significant parts of the site have been farmed in the past and fields have been maintained in pasture grasses for hay or cover crops in recent years. The field provided some part-time farmer income but not enough to be self-supporting.

1) Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how:

No

c. Describe any structures on the site. http://sepaguidance.epermitting.org/DesktopModules/help.aspx?project=0&node=641

There are existing homes on the site per this proposal. One home will be saved but the other old house will be removed.

d. Will any structures be demolished? If so, what?

Yes, one old farmhouse built in 1912 will be removed

e. What is the current zoning classification of the site?

R-6.5 Multi-Family High

f. What is the current comprehensive plan designation of the site?

R-6.5 Multi-Family High

g. If applicable, what is the current shoreline master program designation of the site?

Not in a Shoreline Management Area

h. Has any part of the site been classified as a critical area by the city or county? If so, specify.

City of Marysville Critical Area mapping shows no streams or wetlands. Snohomish County shows some unverified wetlands suspected on the site from Remote Sensing. On the ground evaluations by Critical Area Consultant has found one small onsite wetland and an offsite wetland that has a buffer extending onto this site.

i. Approximately how many people would reside or work in the completed project?

Theoretical average would be 510 people based on SEPA average of 2.8 residents per home.

j. Approximately how many people would the completed project displace?

None

k. Proposed measures to avoid or reduce displacement impacts, if any:

NA

l. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:

This development consistent with the zoning and comprehensive plan for the area.

m. Proposed measures to ensure the proposal is compatible with nearby agricultural and forest lands of long-term commercial significance, if any:

NA

9. HOUSING

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

182 middle income single family detached homes.

c. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

One old house built in 1912 will be replaced, the second house on the site will remain.

d. Proposed measures to reduce or control housing impacts, if any:

NA—this project is adding supply of housing to a poorly supplied industry.

10. AESTHETICS

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

Thirty feet

b. What views in the immediate vicinity would be altered or obstructed?

Instead of pasture and woods there will be streets and single family homes.

c. Proposed measures to reduce or control aesthetic impacts, if any:

Providing a 10-foot landscape buffer and/or 6' fence around the perimeter of the site to screen views from offsite.

11. LIGHT AND GLARE

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

There may be some instantaneous glare come from chrome, glass, or mirrors on the trucks, equipment, and cars as they are moved around the site.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

No

c. What existing off-site sources of light or glare may affect your proposal?

None that will seriously impact the site.

d. Proposed measures to reduce or control light and glare impacts, if any:

None needed

12. RECREATION

a. What designated and informal recreational opportunities are in the immediate vicinity?

To the south across 172nd St NE is Lakewood High School which does have an interlocal agreement with Snohomish County Parks for after school hours use of fields for baseball, softball, soccer, football, tennis etc.

b. Would the proposed project displace any existing recreational uses? If so, describe.

No

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

The project will provide a little over five acres of active and passive recreation area.

13. HISTORIC and CULTURAL PRESERVATION

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers located on or near the site? If so, specifically describe.

No historic structures are shown onsite or nearby on the Washington State DAHP website.

b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

None known and none discovered on nearby projects.

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

Consulted Washington State DAHP WISSARD. There is a moderate risk of encountering archaeological findings. Checked with landowners who have lived at the site for 60 plus years to see if they ever heard of any findings of archeological evidence.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

If there should be anything found, work to stop and local tribes to be notified.

14. TRANSPORTATION

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

172nd St NE is the existing Public Road that will be the Primary Access serving this site. 11th Ave NE which intersects with 172nd at the SW corner of this site is a dead street that is adjacent to the western property line; there are two roads proposed to intersect with 11th.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

Public Transit does provide service along 172nd St NE. There is a westbound Bus Stop at 172nd and 11th Ave NE , an eastbound stop at 172nd just east of 11th Ave NE, westbound at 172nd St NE & 19th Dr NE and eastbound at 172nd St NE & 16th Dr NE.

c. How many additional parking spaces would the completed project or non-project proposal have? How many would the project or proposal eliminate?

Minimum new spaces will be 546 with none eliminated.

d. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

There will be frontage improvements on 11th Ave NE along the entire length of the west property line. There will be some improvements along a short portion of 172nd where this project has frontage. New Public Roads will be constructed internal to the project.

e. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

Burlington Northern Railroad tracks are to the east of the project, however, there are no stations in the immediate vicinity.

f. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and non-passenger vehicles). What data or transportation models were used to make these estimates?

The 182 homes would generate about 1762 Average Daily Trips with 184 Peak hour Trips. Exact Peak Hour not known but likely about 5 PM. See provided traffic report.

g. Will the proposal interfere with, affect or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.

No

h. Proposed measures to reduce or control transportation impacts, if any:

Pay Mitigation Fees.

15. PUBLIC SERVICES

a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.

Only GMA planned increases in Public Services will result from this proposal. When projects are built per Comprehensive Plans and Zoning, jurisdictions are required by GMA to plan for planned increases in Public Services. This project will not result in increased services outside what should have already been planned for.

b. Proposed measures to reduce or control direct impacts on public services, if any.

None Needed, project is per zoning and comprehensive plan and impacts, per GMA, are to be planned for by the local jurisdictions

16. UTILITIES

a. ***Bold/Italicize*** utilities currently available at the site:

Electricity
natural gas
water
refuse service
telephone
sanitary sewer
septic system
other _____

b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

City of Marysville Sewer Extension is in the works as a separate project. City of Marysville Water will be extended from 172nd into the site and will loop back into the main on 172nd.

All other utilities will be extended into the site from 172nd. The Utilities needed for the project will be provided by:

Snohomish County PUD Power
Wave Cable
Ziply Fiber Phone
Marysville Sanitary Sewer and Water

C. SIGNATURE

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

Lead Agency: City of Marysville – Community Development Department

Scan to View SEPA MDNS

Project Description: 182-lot Planned Residential Development on approximately 29.48 acres, utilizing residential density incentives consistent with MMC 22G.090. The project contains one (1) Category III wetland and buffer from an off-site wetland extends on-site. Project will construct associated improvements, include clearing, grading, and utility and roadway extensions. The project proposes a concurrent rezone to align the split zoning of the underlying parcels with the project proposal.

SEPA Threshold Determination: The lead agency has determined that this proposal does not have a probable significant adverse impact on the environment. An environmental impact statement (EIS) is NOT required under RCW 43.21C.030(2)(c). This decision was made after review by the City of Marysville of a completed environmental checklist and other information on file with this agency. This information is available for public review upon request.

Public Comment Period: This MDNS is subject to a 14-day comment period. Written comments may be submitted by mail or e-mail to the lead agency's SEPA contact person. Comments must be received by **December 17, 2024**.

Appeals: This MDNS may be appealed pursuant to the requirements of MMC 22E.030.180. Any appeal must be accompanied by a filing fee as prescribed by MMC 22G.030, and be filed in writing at the City of Marysville Community Development Department, 510 Delta Avenue, Marysville, WA 98270. The appeal must be received by 4:30 p.m., by **December 18, 2024**. The appeal must contain the items set forth in MMC 22G.010.550.

Zoning Multiplier		6.5
Net project area percentage	80%	
Maximum yield (Standard)		**153**

RESIDENTIAL BONUS INCENTIVES (MMC 22C.090)

	Benefit	Density incentive	Provided	Bonus yield
3	**Community image and identity**			
3a.	Contribution towards an identified capital improvement project, including, but not limited to, parks, roadways, bicycle facilities, pedestrian facilities, multi-use trails, gateway sign, etc.	$25,000 per bonus unit. Bonus units may only be claimed in whole numbers or 0.5 bonus unit increments.	0	0.0
5	**Locational/mixed use**			
5a.	a. Developments located within one-quarter mile of transit routes, and within one mile of fire and police stations, medical, shopping, and other community services.	5 percent increase above the base density of the zone		7.7
6	**Storm drainage facilities Dual use retention/detention facilities**			
6a.	Developments that incorporate active recreation facilities that utilize the storm water facility tract.	5 bonus units per acre of the storm water facility tract used for active recreation.	0.36 ac	1.8
6b.	Developments that incorporate passive recreation facilities that utilize the storm water facility tract.	2 bonus units per acre of the storm water facility tract used for passive recreation.	2.75 ac	5.5
7	**Project design**			
7c.	Installation of perimeter fencing or landscaping, in order to improve design or compatibility between neighboring land uses. This benefit shall not be pursued when any of the following circumstances apply: (i) fencing or landscaping is otherwise required by code, or (ii) landscaping is voluntarily provided in order to deviate from other code requirements.	1 bonus unit per 500 lineal feet of perimeter fencing or landscaping installed (when not otherwise required by code).	3,941 lf	7.9
7e.	Private park and open space facilities integrated into project design	5 bonus units per improved acre of park and open space area. Ongoing facility maintenance provisions are required as part of RDI approval.	3.34 ac	16.71
7f.	Enhanced entry landscaping	1 bonus unit per 2,500 square feet of additional enhanced entry landscaped area (when not otherwise required by code). A minimum of 1,000 square feet of entry landscaping of exceptional, outstanding or unique design, as determined by the director, must be provided in order to qualify for this benefit.	3,395 sf	1.4
			Total bonus	40.9
			Max bonus (20% Base)	30.7
			Base density	153
			Total yield	**183**

Offsite area		
ROW 966 - ROW dedication	22,449 sf	(0.52 ac)

SITE AREA ANALYSIS

Gross site area	1,283,961 sf	(29.48 ac)
Area in ROW	238,688 sf	(5.48 ac)
Area in lots	734,466 sf	(16.86 ac)
Area in tracts	310,807 sf	(7.14 ac)
Total	**1,283,961 sf**	**(29.48 ac)**

IMPERVIOUS AREAS

Existing road area	*0 sf*	*(0.00 ac)*
Existing driveway area	*3,313 sf*	*(0.08 ac)*
Existing roof area	*12,501 sf*	*(0.29 ac)*
New road pavement area onsite	130,525 sf	(3.00 ac)
New road pavement area offsite	9,389 sf	(0.22 ac)
New driveway area	106,036 sf	(2.43 ac)
New roof area	401,843 sf	(9.23 ac)
New sidewalk area onsite	66,525 sf	(1.53 ac)
New sidewalk area offsite	9,784 sf	(0.22 ac)
Total impervious area onsite	704,928 sf	(16.18 ac)
Total impervious area	724,101 sf	(16.62 ac)

VEGETATIVE ANALYSIS

EXISTING		
Forested areas	*1,268,147 sf*	*(29.11 ac)*
Building & Gravel areas	*15,814 sf*	*(0.36 ac)*
PROPOSED		
Landscaped areas	579,032 sf	(13.29 ac)
Building & Driveway areas	507,879 sf	(11.66 ac)
Road & Sidewalk areas	197,050 sf	(4.52 ac)
Total site area	1,283,961 sf	(29.48 ac)

SLOPE ANALYSIS

Slopes vary across the site, with the steepest slopes (up to 10%) in the northeast portion of the site. Slopes typically range from 0 to 10%. Average slope is 3.89%. Site slopes generally downward from the west to east.

There are no indications of unstable slopes on the site.

Slope analysis based on T.I.N. triangle slopes of the LiDAR surface:

Range	Area (sf)
0% - 5%	1,038,085 sf
5% - 10%	252,507 sf
10% - 15%	0 sf
15% - 33%	0 sf
33% +	0 sf
Total =	1,283,961 sf (29.48 ac)

ZONING NOTES R-6.5 (PRD)

Density: Dwelling units/acre	6.5 du/acre
Minimum Street Setback	10 feet
Minimum Side Yard Setback	5 feet
Minimum Rear Yard Setback	10 feet
Minimum Lot Width	30 feet
Base Height	30 feet
Maximum Lot Impervious	70%
Minimum Lot Size	3,500 sf
Minimum Driveway Length	20 feet

STATEMENT OF INTENT

It is the Applicants intent to Subdivide the property into Fee Simple lots for Detached Single Family homes

LOTS NOTE

All lots under 5,000 square feet are subject to the *Small lot single family dwelling development standards* set forth in MMC 22C.010.310.

HOUSING MIX RATIO
